

# CONTENTS

## A ALGEBRA AND NUMBER THEORY

H. G. Diamond, <i>A number theoretic series of I. Kasara</i> .....	283
R. Farnsteiner, <i>On the structure of simple-semiabelian Lie-algebras</i> .....	287
D. H. Lehmer and E. Lehmer, <i>The sextic period polynomial</i> .....	341
L. J. Ratliff, Jr., <i>On asymptotic prime divisors</i> .....	395
R. G. Swan, <i>n-generator ideals in Prüfer domains</i> .....	433

## B – ANALYSIS

B. A. Brenken, <i>Representations and automorphisms of the irrational rotation algebra</i> .....	257
E. Maluta, <i>Uniformly normal structure and related coefficients</i> .....	357
C. L. May, <i>The species of bordered Klein surfaces with maximal symmetry of low genus</i> .....	371
N. Riedel, <i>Disintegration of KMS-states and reduction of standard von Neumann algebras</i> .....	415
V. Totik, <i>An interpolation theorem and its applications to positive operators</i> .....	447
R. C. Vrem, <i>Hypergroup joins and their dual objects</i> .....	483

## E – LOGIC AND FOUNDATIONS

W. Julian and F. Richman, <i>A uniformly continuous function on <math>[0, 1]</math> that is everywhere different from its infimum</i> .....	333
---	-----

## F – PROBABILITY AND STATISTICS

G. Grabinsky, <i>Poisson process over <math>\sigma</math>-finite Markov chains</i> .....	301
--	-----

## H – COMBINATORICS

D. F. Hsu and A. D. Keedwell, <i>Generalized complete mappings, neofields, sequenceable groups and block designs. I</i> .....	317
---	-----

Our subject classifications are: A – ALGEBRA AND NUMBER THEORY; B – ANALYSIS;  
C – APPLIED MATHEMATICS; D – GEOMETRY; E – LOGIC AND FOUNDATIONS;  
F – PROBABILITY AND STATISTICS; G – TOPOLOGY; H – COMBINATORICS
