

SUBALGEBRAS OF C^* -ALGEBRAS

BY

WILLIAM B. ARVESON

University of California, Berkeley, Calif. U.S.A. ⁽¹⁾

Contents

Introduction	142
Chapter 1. Completely positive maps.	143
1.1. Preliminaries	143
1.2. An extension theorem	148
1.3. Lifting commutants	154
1.4. The order structure of $CP(B, \mathfrak{K})$	158
Chapter 2. Boundary representations and Silov boundaries	167
2.1. Boundary representations.	167
2.2. Admissible subspaces of C^* -algebras	170
2.3. Finite representations of operator algebras	174
2.4. A characterization of boundary representations	178
Chapter 3. Applications to nonnormal operators.	180
3.1. Characters of $C^*(T)$ and $\text{sp}(T) \cap \partial W(T)$	181
3.2. Simple algebraic operators	183
3.3. Almost simple operators and the commutator ideal in $C^*(T)$	193
3.4. The structure of $C^*(S_\nu)$	197
3.5. Boundary representations for $P(S_\nu)$	202
3.6. Representations of the disc algebra	205
3.7. A characterization of the Volterra operator	217
Appendix.	219
A.1. Semi-invariant subspaces.	219
A.2. A positive linear map with no positive extension	221
A.3. A contractive representation need not be completely contractive	221
