Table of Contents

§ 1. Introduction.	2
PART I. ANALYSIS IN THE SPACE $\mathcal{C}(G)$	
§ 2. Representations on a locally convex space.	5
§ 3. Absolute convergence of the Fourier series.	8
§ 4. Proof of Lemma 7	11
§ 5. Differentiable vectors and Fourier series in function spaces	12
§ 6. Proof of Lemma 4	14
§ 7. Some elementary facts about σ and Ξ	15
§ 8. Proof of Theorem 1.	18
§ 9. The space $\mathcal{C}(G)$	19
§ 10. The left- and right-regular representations on $\mathcal{C}(G)$	20
§ 11. Spherical functions	23
§ 12. Application to $\mathcal{C}_F(G)$	25
§ 13. Density of $C_c^\infty(G)$ in $\mathcal{C}(G)$	26
§ 14. An inequality	27
§ 15. The mapping of $\mathcal{C}(G)$ into $\mathcal{C}(\tilde{M})$	29
§ 16. Proof of Theorem 4.	30
§ 17. Convergence of certain integrals	32
§ 18. The mapping $f \rightarrow F_f$	35
§ 19. A criterion for an invariant eigendistribution to be tempered	38
§ 20. Proof of Theorem 8	45
§ 21. Proof of an earlier conjecture	46
§ 22. Proof of Lemma 40 (first part).	48
