

CORRECTION

ON MAIN EFFECT PLUS ONE PLANS FOR 2^m FACTORIALS

BY SUBIR GHOSH

The Annals of Statistics (1980) **8** 922–930

B. C. Gupta has pointed out that equation (20) in Corollary 1 giving a lower bound is not correct, by presenting a counterexample for $m = 7$. Designs satisfying the incorrect lower bound in (20) can be found for all values of h but, unfortunately, at the cost of an increase in the number of treatments.
