

DEFORMATION THEORY OF SANDWICHED SINGULARITIES

T. DE JONG AND D. VAN STRATEN

CONTENTS

Introduction	452
1. Sandwiched singularities	454
1.1. Decorated curves	455
1.2. The ideals $I(C, l)$	457
1.3. Multiplicity matrix	458
1.4. The infinitely near points made visible	460
2. The shape of the surface	462
2.1. The spaces $X(C)$ and $Y(C)$	462
2.2. The spaces $X(C, l)$ and $Y(C, l)$	464
3. Deformations of sandwiched singularities	469
3.1. The functor $\text{Def}(\Sigma, C, g)$	470
3.2. Infinitesimal deformations	471
3.3. Proof of Theorem 3.3 for $l(i)$ big	473
3.4. The argument for $l(i)$ small	474
4. Pictures and components	475
4.1. Decoration as divisor on \tilde{C}	475
4.2. Picture deformations and smoothing components	479
4.3. The map $\phi : \mathcal{S}(X) \rightarrow \mathcal{S}(C, l)$	482
4.4. Reduced fundamental cycle	486
5. Topological aspects	489
5.1. The homology of the Milnor fibre	490
5.2. The intersection form	491
5.3. On the monodromy group	492
5.4. Divisors on smoothings	493
5.5. The canonical class	494
5.6. On the fundamental group of the Milnor fibre	495
6. Examples and applications	498
6.1. Line configurations	498
6.1.1. One to six lines	498
6.2. Some special configurations	501

Received 18 March 1996. Revision received 21 May 1997.

1991 *Mathematics Subject Classification*. 14B07, 14J17, 32S30.
