

THE GAUSS EQUATIONS AND RIGIDITY OF ISOMETRIC EMBEDDINGS

ERIC BERGER, ROBERT BRYANT, AND PHILLIP GRIFFITHS

Table of Contents

0. Introduction	
(a) Statements of main results	804
(b) Discussion of sections 1, 2	805
(c) Discussion of section 3	806
(d) Discussion of section 4	808
(e) Discussion of section 5	809
1. Basic structure equations	
(a) Structure equations of Riemannian manifolds	810
(b) Structure equations of submanifolds of Euclidean space	814
2. The isometric embedding system	
(a) Setting up the system	823
(b) Proof of the Burstin–Cartan–Janet–Schaeffly (BCJS) theorem	830
3. Localization of the Gauss equations	
(a) Proof of (i) and (ii) in the Main Theorem	835
(b) Proof of (iii) in the Main Theorem	842
4. Nongeneric behavior of the Gauss equations	
(a) Exteriorly orthogonal forms	855
(b) Isometric embedding of space forms and similar metrics	859
5. The Gauss equations and the $GL(n)$ -representation theory of tensors	
(a) Introduction	870
(b) $GL(n)$ and the symmetric group actions	871
(c) Representations of algebras	872
(d) The regular representation of FS_q	874
(e) $GL(V^*)$ -irreducible subspaces of $\bigotimes^q V^*$	878
(f) Decomposition of the tensor product: the Littlewood–Richardson rule	879
(g) The spaces $K = K^{(0)}, K^{(1)}, \dots$	881
(h) The Gauss equations: an equivariant approach	884
References	892
