	A.1. Distribution kernels .....	622
	A.2. Boundary values .....	626
	A.3. Quantization of real projective duality.....	628
Appendix B.	Homogeneous coordinates for the blow up .....	630

**0. Introduction.** Let  $P$  be a real  $n$ -dimensional projective space. For  $k \in \mathbb{Z}$  and  $\varepsilon \in \mathbb{Z}/2\mathbb{Z}$ , we denote by  $\mathcal{C}_P^\infty(\varepsilon|k)$  the  $\mathcal{C}^\infty$  line bundle on  $P$  whose sections  $f$  satisfy the relation

$$f(\lambda x) = (\operatorname{sgn} \lambda)^\varepsilon \lambda^k f(x) \quad \forall \lambda \in \mathbb{R}^\times,$$
