

STATISTICAL THEORY AND METHOD ABSTRACTS

A Journal of the International Statistical Institute

The object of this abstracting service is to cover published papers concerned with statistical theory, including relevant aspects of probability and mathematical methods, and new contributions to statistical method. These abstracts provide valuable information on new developments for studying problems in many fields: such as frequency distributions, estimating and testing problems, sampling and experimental designs, variance analysis, spectral theory and other methods in time-series analysis, queueing theory, reliability and acceptance inspection. Journals appearing in all parts of the world, on mathematics and statistics, or on other fields and possible contribution of interest are regularly scanned for suitable papers. Abstracts are also prepared from collections of papers such as reports of conferences, symposia and seminars: technical reports of experiment and research stations are covered.

The abstracts do not exceed 400 words, with occasional "double abstracts" for papers where this size is not sufficient to represent the paper. The language is English; the language of the original paper is indicated. The headings give the name and address of the author together with the Journal in which the paper is published moreover a note is added on the number of references, tables and figures.

The classification scheme which is used in this Journal supplies a division of all abstracts in twelve main sections. The pages of the Journal are colour-tinted in accordance with these main sections. Each section is further sub-divided to indicate the main topic of the paper; a secondary number denotes the most important additional topic referred to by the author. A special index in each part links together these two classifications. This scheme is arranged to facilitate transfer to punch cards. Papers containing new statistical tables are listed in a separate index.

The abstracts are numbered serially, the volume number being inserted as a prefix. The Journal is published four times a year and contains approximately 1,000 abstracts. An author index, the secondary classification index and the new statistical tables index are published in issue and combined in a yearly supplement which also contains a list of all Journals represented in the volume by one or more abstracts.

<i>Annual Subscription</i>	£7. 10s. (U.S.A. \$24.00)
<i>Single Number</i>	£2. 5s. (U.S.A. \$ 7.00)
<i>Loose Leaf Binders for</i>	16s. 3d including postage
<i>Single Abstract Sheets</i>	and packing.

REVIEW OF THE INTERNATIONAL STATISTICAL INSTITUTE

Contents of Vol. 37, No. 3

Articles

McCarthy, P. L.—Pseudo-replication: half samples

Martin-Löf, P.—Algorithms and randomness

Thorp, E. O.—Optimal gambling systems for favorable games

Mahajan, B. M.—On some aspects of unadjusted and adjusted R^2 estimated from Indian consumption data

Communications

Statistical organization and administration

Statistical training and research

Statistical societies

Calendar of meetings

Book Reviews

The REVIEW OF THE ISI is published three times per year. The annual subscription is \$11.50 post free.

Orders should be sent to: *International Statistical Institute, 2, Oostduinlaan, The Hague, Netherlands.*
