RANDOM WALK IN A RANDOM ENVIRONMENT AND FIRST-PASSAGE PERCOLATION ON TREES

BY RUSSELL LYONS AND ROBIN PEMANTLE

The Annals of Probability (1992) **20** 125–136

The proofs of Proposition 2 and of the first two parts of Theorem 3(ii) are incorrect, although the results themselves are correct. Here are correct proofs.

PROOF OF PROPOSITION 2. Let Π_n be as indicated. Our assumption is that

$$M := \sup_n \mathbf{E}\Bigg[\sum_{\sigma\in\Pi_n} C_\sigma^x\Bigg] = \sup_n \sum_{\sigma\in\Pi_n} p^{|\sigma|} < \infty.$$

Since $x \ge -1$, the inequality between the harmonic mean and the power mean of order x states that for positive numbers a_n, we have

$$\left(\frac{1}{N}\sum_{n=1}^{N} a_n^{-1}\right)^{-1} \le \left(\frac{1}{N}\sum_{n=1}^{N} a_n^{x}\right)^{1/x}.$$

Take the xth power of both sides, use $a_n := \sum_{\sigma\in\Pi_n} C_\sigma$ and the fact that $a_n^x \le \sum_{\sigma\in\Pi_n} C_\sigma^x$ since $0 < x \le 1$ to obtain

$$\left(\frac{1}{N}\sum_{n=1}^{N}\left(\sum_{\sigma\in\Pi_n} C_\sigma\right)^{-1}\right)^{-x} \le \frac{1}{N}\sum_{n=1}^{N}\left(\sum_{\sigma\in\Pi_n} C_\sigma\right)^{x} \le \frac{1}{N}\sum_{n=1}^{N}\sum_{\sigma\in\Pi_n} C_\sigma^x.$$

Now take the expectation to arrive at the bound

$$\mathbf{E}\left[\left(\frac{1}{N}\sum_{n=1}^{N}\left(\sum_{\sigma\in\Pi_n} C_\sigma\right)^{-1}\right)^{-x}\right] \le \mathbf{E}\left[\frac{1}{N}\sum_{n=1}^{N}\sum_{\sigma\in\Pi_n} C_\sigma^x\right] \le M.$$

Fix $L > 0$. By Markov's inequality, we may deduce that

$$\begin{aligned}\mathbf{P}\left[\sum_{n=1}^{\infty}\left(\sum_{\sigma\in\Pi_n} C_\sigma\right)^{-1} \le L\right] &\le \mathbf{P}\left[\sum_{n=1}^{N}\left(\sum_{\sigma\in\Pi_n} C_\sigma\right)^{-1} \le L\right] \\ &= \mathbf{P}\left[\left(\frac{1}{N}\sum_{n=1}^{N}\left(\sum_{\sigma\in\Pi_n} C_\sigma\right)^{-1}\right)^{-x} \ge \left(\frac{N}{L}\right)^{x}\right] \\ &\le M\left(\frac{L}{N}\right)^{x}.\end{aligned}$$
