14 INVARIANT MEASURES ON GROUPS AND THEIR USE IN STATISTICS by Robert A. Wijsman

A discussion of distributions in statistical models with groups of invariance transformations.

This monograph deals with problems concerning distributions in statistical models in which there is a group of invariance transformations. The methods presented make use of mathematical tools that involve the interplay between groups and integration. The author demonstrates by examples the statistical usefulness of these methods and presents a systematic account of their mathematical background.

15 ANALYTIC STATISTICAL MODELS by Ib M. Skovgaard

An introduction to analytic statistical models.

This monograph introduces a class of statistical models (the analytic models) which is sufficiently well behaved to satisfy regularity conditions of the type typically met in theorems of asymptotic statistical inference, and at the same time sufficiently rich to contain many of the commonly used statistical models, including the (sufficiently smooth) curved exponential families. The author defines the class of analytic models, derives its basic mathematical and probabilistic properties, shows that it contains a wide range of common statistical models, and demonstrates its applicability in asymptotics.

16 TOPICS IN STATISTICAL DEPENDENCE edited by H. W. Block, A. R. Sampson, & T. H. Savits

Proceedings of the Symposium on Dependence in Probability and Statistics, Somerset, Pennsylvania, August 1987.

This was the first symposium dedicated solely to research in the area of positive and negative dependence for the modeling and analysis of multivariate data. Many researchers in this broad and diverse field contribute 41 papers to this volume.
