

## THE INVERSE FUNCTION THEOREM OF NASH AND MOSER

BY RICHARD S. HAMILTON

### Contents

#### Introduction

#### Part I. Calculus on Fréchet spaces

- I.1. Fréchet spaces
  - 1.1. Definition of a Fréchet space
  - 1.2. Properties of Fréchet spaces
  - 1.3. Families of linear maps
- I.2. The Riemann integral
  - 2.1. The definite integral
  - 2.2. Parametrized curves
- I.3. The directional derivative
  - 3.1. Definition of the directional derivative
  - 3.2. Properties of the derivative
  - 3.3. The chain rule
  - 3.4. Partial derivatives
  - 3.5. Second derivatives
  - 3.6. Higher derivatives
- I.4. Fréchet manifolds
  - 4.1. Manifolds
  - 4.2. Submanifolds
  - 4.3. Vector bundles
  - 4.4. Maps of manifolds
  - 4.5. Connections
  - 4.6. Lie groups
- I.5. The inverse function theorem
  - 5.1. Estimates
  - 5.2. The inverse function theorem for Banach spaces
  - 5.3. Inverses of linear maps
  - 5.4. Examples in Banach spaces
  - 5.5. Counterexamples in Fréchet spaces
  - 5.6. Differential equations in Fréchet spaces

#### Part II. The Nash-Moser Category

- II.1. Tame Fréchet spaces
  - 1.1. Graded Fréchet spaces
  - 1.2. Tame linear maps
  - 1.3. Tame Fréchet spaces
