

ADDENDUM TO: THE VARIATIONAL THEORY OF GEODESICS

BY RICHARD SACKSTEDER

Several people have pointed out that in my review of *The variational theory of geodesics*, I overlooked the fact that the original Russian version had a preface which acknowledged the author's reliance on the work of Helgason and others. Unfortunately, this preface was not included in the English translation; however, the publisher has now added a preface which indicates the author's sources.

ADDENDUM, VOLUME 76

Paul Ponomarev, *Class numbers of positive definite quaternary forms*, pp. 646–649.

Page 646, line 1: Insert “of dimension four” after “vector space”.
