

# Pacific Journal of Mathematics

|                                                                                                                                                                       |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>R. Arens</b> , Reducing the order of the Lagrangean for a classical field in curved space-time . . . . .                                                           | 209 |
| <b>S. Berhanu, W. W. Comfort and J. D. Reid</b> , Counting subgroups and topological group topologies . . . . .                                                       | 217 |
| <b>M. Cambern</b> , Isomorphisms of spaces of norm-continuous functions . . . . .                                                                                     | 243 |
| <b>G. A. Edgar and J. Zhao</b> , The ordering structure on Banach spaces . . . . .                                                                                    | 255 |
| <b>I. Glicksberg</b> , An analogue of Liapounoff's convexity theorem for Birnbaum-Orlicz spaces and the extreme points of their unit balls . . . . .                  | 265 |
| <b>D. B. Heifetz</b> , $p$ -adic oscillatory integrals and wave front sets . . . . .                                                                                  | 285 |
| <b>J. E. Pantoja</b> , Liftings of supercuspidal representations of $GL_2$ . . . . .                                                                                  | 307 |
| <b>S. C. Pinault</b> , An isoperimetric inequality for surfaces stationary with respect to an elliptic integrand and with at most three boundary components . . . . . | 353 |
| <b>G. Pinczon</b> , Non linear multipliers and applications . . . . .                                                                                                 | 359 |
