

Microform is our name for microreproductions of Springer publications, supplied as either 35 mm or 16 mm microfilm, or as microfiche.

The initial offer comprises a selection from our range of journals.

Complete runs up to and including 1969 are available for 6 periodicals, representative of our publishing activities in mathematics, natural sciences, and medicine:

	Vols.		DM	US \$
Communications in Mathematical Physics	1-15	1965-69	1275,—	396.60
Archive for Rational Mechanics and Analysis	1-35	1957-69	3000,—	933.00
Numerische Mathematik	1-14	1959-69	1200,—	373.20
Zentralblatt für Mathematik	1-61 64-176	1931-69	8763,—	2725.00
Theoretica Chimica Acta	1-15	1962-69	900,—	279.90
Psychopharmacologia	1-16	1959-69	1050,—	326.60

Microform reproductions of volumes of these journals issued since 1969 are in preparation. All these reproductions are priced lower than the regular printed editions.

The production technique for microfilm and microfiche is based on our experience in the USA and Europe.

Order Form Springer-Verlag Microform

Communications in Mathematical Physics

Vols. 1-15 1965-69 DM 1275,—; US \$ 396.60*

- 35 mm Film** * The price applies to each particular Microform type
- 16 mm Film** Please check appropriate square
- Microfiche** Prices are subject to change without notice

- Enter my standing order for future volumes in Microform
- Send information about readers and reader-printers

The 35 mm and 16 mm microfilms are available as negatives in 30 m rolls. Springer-Verlag will be glad to furnish information about the distribution of volumes on these rolls. The microfiche are sheetfilms 105 mm x 148 mm in negative form. One set of fiche contains the contents of one journal volume.

All volumes of periodicals offered under our new Microform program are still available in printed form. Microform reproductions of other Springer journals and books are planned for the future. You are invited to inquire of Springer-Verlag concerning prices and delivery periods.

Instructions to Authors

Authors are kindly requested to note the following points:

Manuscripts should be submitted in duplicate, with double spacing. They may be written in English, French or German, but in every case a summary (abstract) in English should be enclosed. The paper must be in its final form in order to avoid corrections of the proofs. Changes in content and style are to be avoided; expenses accruing from such additional corrections will be charged to the authors.

The symbols employed must be so clearly marked that even a layman could have no doubts as to their placing and interpretation. Special type should be indicated by underlining in color. In order to facilitate the compositor's task we recommend the underlining of *Greek characters in red, Gothic in blue, Script in green. In each case capital letters are characterized by underlining twice, lower case letters by underlining once.* Handwritten Roman characters should be avoided if possible. Bold face type for individual symbols is indicated by underlining with a wavy line in pencil. It is most helpful if formulae are type-written and Roman characters are employed also for Gothic and Script and simply distinguished by underlining in colour. The underlining of formulae and mathematical signs by means of a typewriter should be avoided; this would inevitably lead to inclusion in the composition as part of the mathematical symbol. All letters contained in formulae as well as single letters in the text are automatically composed in italics. Hence, abbreviations that appear in formulae and are to be composed in Roman type (the type normally used for the text) should be specially marked (by underlining in yellow, if possible). The fact that typewriters usually show no difference between the figure 0 (zero) and the letter O, nor frequently, between 1 (one) and the letter l leads to considerable confusion. Here it is absolutely essential that each letter and each numeral be individually distinguished. The numeral 1 should be written clearly as such (i. e. with a preceding hook) and not merely as a downward stroke. The latter is particularly disastrous where 1 appears as a superscript. In manuscripts written in English, in which the small (Roman) letter *a* is employed as a mathematical symbol care must be taken to avoid any confusion with the indefinite article.

Footnotes which do not belong to the head of the article should be numbered consecutively.

References to the literature should appear not as footnotes but as a numbered and complete bibliography at the end of the article. Journal articles should be cited by initials and name(s) of all author(s), the internationally recognized abbreviation for the name of the journal, the volume, the numbers of the first and last pages and the year of publication. Citations of books should include the author(s), full title, edition, place of publication, publisher and year of publication. In the text a reference to the bibliography should be indicated by the corresponding number enclosed in square brackets and placed on the same level as the rest of line (e. g. [5]).

Diagrams and illustrations should be submitted on separate sheets, apart from the text. A clear unambiguous sketch is satisfactory, since it will be redrawn by the publisher.

75 offprints of each article will be supplied to the author free-of-charge and additional copies may be obtained at cost price if ordered before the issue goes to press.

Manuscripts may be sent to
