Springer

Springer L^AT_EX and plain-T_EX macros

We can use your T_EX files directly for phototypesetting if you have used our macros. Makropackages are available for the following journals:

L_{Journal}1 L^AT_EX styles for Acta Informatica, Applicable Algebra in Engineering, Communication and Computing, Archive for Mathematical Logic, Astronomy & Astrophysics Reviews, Calculus of Variations, Communications in Mathematical Physics, Continuum Mechanics and Thermodynamics, Economic Theory, Inventiones mathematicae, Journal of Evolutionary Economics, Journal of Mathematical Biology, Manuscripta mathematica, Mathematische Annalen, Mathematische Semesterberichte, Mathematische Zeitschrift, Numerische Mathematik, Probability Theory and Related Fields, Statistical papers, Theoretica Chimica Acta

P_{Journal}1g global plain T_EX packages for all journals mentioned above; **P_{Journal} 1** may also still be used. All packages are available via mailserver, FTP server or on DOS diskettes.

Mailserver

Send an e-mail message to svserv@vax.ntp.springer.de which must contain one (several) of the following commands:

L_{Journal}1 `get /tex/latex/ljournal1.zip`
P_{Journal}1g `get /tex/plain/pjournal1g.zip`

In order to be transmitted ungarbled via the net, the files are pkzipped and uuencoded. The line `get /tex/help-tex.txt` in your e-mail to `svserv` will send you a file explaining how to unpack the files you receive. Please do not send regular e-mail to this address.

FTP server

The internet address is 192.129.24.12 (trick.ntp.springer.de) The username is FTP or ANONYMOUS and the files are in the directory `/pub/tex`

Diskettes

To get the macro files and the AMS fonts (when needed) on 3.5" DOS diskettes please write to:

Springer-Verlag, Journal Production,
Tiergartenstr. 17
D-69121 Heidelberg, Germany
e-mail: springer@vax.ntp.springer.de
FAX number: x 49 6221 487625

Please indicate clearly which macro package you need and the journal for which your paper is intended.

Use our L^AT_EX and plain-T_EX macros to prepare your article for this and for other Springer journals.

Monographs in Mathematics

M. Nagasawa, Universität Zürich,
Switzerland

Schrödinger Equations and Diffusion Theory

1993. 332 pages. Hardcover
DM 168.–/öS 1310.40/sFr. 148.–
ISBN 3-7643-2875-4

"There is a long standing controversy on the meaning of Schrödinger equations. Nagasawa devotes a whole appendix to approaches by Fényes, Nelson, Zambrini, Bohm, and others. He manages to discuss them all in the framework of his approach and he clearly works out their main defects. ... The precise and plentiful explanations aid the readers who do not have an infinite amount of time; other readers have the chance to enjoy some really difficult proofs employing stochastic analysis."

SIAM, Vol. 36, 6/94

Ginzburg-Landau Vortices

1994. 188 pages. Hardcover
DM 98.–/öS 764.40/sFr. 88.–
ISBN 3-7643-3723-0

"The three authors are well-known excellent specialists in nonlinear functional analysis and partial differential equations and the material presented in the book covers some of their recent and original results. The book is written in a very clear and readable style with many examples."

The Moduli Space of Curves

1995. 564 pages. Hardcover
Approx. DM 168.–/öS 1310.40/sFr. 138 –
ISBN 3-7643-3784-2

Modern theoretical physics has shown many connections with both new and old ideas in mathematics. The connection between physical concepts, such as string theory and conformal field theory, and the mathematical field of algebraic geometry is demonstrated in a lively fashion in this collection of papers arising from a conference on "The Moduli Space of Curves."

Applied Mathematical Sciences

Vol. 112:

Y.A. Kuznetsov

Elements of Applied Bifurcation Theory

1995. XIX, 598 pp. 232 figs. Hardcover **DM 98,-**; öS 764,40; sFr 94,50 ISBN 0-387-94418-4

This volume covers the basic topics of the bifurcation theory and helps to compose a course on nonlinear dynamical systems or system theory. Special attention is given to efficient numerical implementations of the developed techniques. Several examples from recent research papers are used as illustrations.

The book is designed for advanced undergraduate or graduate students in applied mathematics, as well as for Ph.D students and researchers in physics, biology, engineering and economics who use dynamical systems as model tools in their studies.

Vol. 111:

A. Visintin

Differential Models of Hysteresis

1994. XI, 407 pp. 46 figs. Hardcover **DM 94,-**; öS 733,20; sFr 90,50 ISBN 3-540-54793-2

The author provides a self-contained and comprehensive introduction to the analysis of hysteresis models, and illustrates several new results in this field.

The classical models of Prandl, Ishlinskiĭ, Preisach and Duhem are formulated and studied, using the concept of "hysteresis operator". A new model of discontinuous hysteresis is introduced. Several partial differential equations containing hysteresis operators are studied in the framework of Sobolev spaces.

E. Zeidler

Applied Functional Analysis

Vol. 108:

Applications of Mathematical Physics

1995. Approx. 640 pp. 56 figs. Hardcover **DM 118,-**; öS 861,40; sFr 113,50 ISBN 0-387-94442-7

Vol. 109:

Main Principles and Their Applications

1995. Approx. 440 pp. 31 figs. Hardcover **DM 98,-**; öS 715,40; sFr 94,50 ISBN 0-387-94422-2

Zeidler is well known in the mathematical community for his extensive treatise on nonlinear functional analysis.

In these two volumes, he has written a comprehensive introduction to functional analysis with an emphasis on illustrating its applications. These two volumes will give the reader an elementary introduction to the main principles of both linear and nonlinear functional analysis, and numerical analysis, including numerous applications to mathematical physics.

A broad audience will find these books valuable and accessible as they require few prerequisites.
