## THE LOW DENSITY LIMIT IN FINITE TEMPERATURE CASE

L. ACCARDI AND Y. G. LU\*

### § 1. Introduction

The low density limit in the Boson Fock case has been investigated in [1] where also the physical meaning and their motivations have been explained (cf. also [0]). From these papers one knows how the number processes can be obtained from a quantum Hamiltonian model via a certain limit procedure.

But the physically more meaningful case is the one in which the initial state of the reservoir is a finite temperature rather than Fock state. The present paper is devoted to do this case.

In the present paper, our physical model and essential assumptions are same as ones of [1] (except the Fock state). We consider a “System + Reservoir” model described by a system Hilbert space  $H_0$  and a (one particle) reservoir Hilbert space  $H_1$ ; the system Hamiltonian  $H_s$ ; the (one particle) reservoir Hamiltonian  $\Delta$ , and the associated one particle reservoir evolution

$$(1.0) \quad S_t^0 := \exp(-it\Delta)$$

which is a one parameter unitary group on  $B(H_1)$ .

Let be given, on the CCR  $C^*$ -algebra over  $H_1$  (cf. [11]), a gauge invariant quasi-free state  $\varphi^{(z)}$  with fugacity  $z^2$ , i.e. for each  $f \in H_1$ ,

$$(1.1) \quad \varphi^{(z)}(W(f)) = \exp\left(-\frac{1}{2} \langle f, (1 + z^2 e^{-\frac{1}{2}H_s})(1 - z^2 e^{-\frac{1}{2}H_s})^{-1}f \rangle\right)$$

where  $H$  is a self-adjoint operator which, will be supposed in this paper, commutes with  $\Delta$  and  $W(f)$  is the Weyl operator with test function  $f$ . Moreover up to GNS-construction one can write the left hand side of (1.1) as

$$\langle \Phi_z, W(f) \Phi_z \rangle$$

\*On leave of absence from Beijing Normal University

where the Weyl operators act on a Hilbert space  $\mathcal{H}_z$  and  $\Phi_z$  is a cyclic vector for the Weyl algebra. For any Hilbert space  $\mathcal{H}$ , we shall denote  $\Gamma(\mathcal{H})$  the Fock space over  $\mathcal{H}$ .

As in [1], we consider the situation in which the interaction between the System and Reservoir is of the form

$$(1.2) \quad V := i(D \otimes A^+(g_0)A(g_1) - D^+ \otimes A(g_1)^+A(g_0))$$

and the time evolution in the interaction picture is defined by

$$(1.3) \quad U_t := e^{itH_{\text{fr}}}, e^{-itH_{\text{tot}}}$$

where

$$(1.4a) \quad H_{\text{fr}} := H_0 \otimes 1 + 1 \otimes d\Gamma(-\Delta)$$

is called the free Hamiltonian and

$$(1.4b) \quad H_{\text{tot}} := H_{\text{fr}} + V$$

the total Hamiltonian.

A simple computation shows that the time evolution  $U(t)$  is the solution of the following ordinary differential equation

$$(1.5) \quad \frac{d}{dt}U_t = iV(t) \cdot U_t$$

and where

$$(1.6) \quad V(t) := e^{itH_{\text{fr}}} V e^{-itH_{\text{fr}}}$$

Now, as in [1], let us suppose that

1)  $g_0$  and  $g_1$  have disjoint spectrum sets, i.e.

$$(1.7) \quad \langle g_0, S_t^0 | g_1 \rangle = 0, \quad \forall t \in \mathbf{R}$$

2) the rotating wave approximation:

$$(1.8) \quad e^{itH_0} D e^{-itH_0} = e^{-it(\omega_0 - \omega_1)} D, \quad \text{for some } \omega_0 \neq \omega_1.$$

These two conditions have rather good physical explanations and under them, the same arguments as in [1] (or [0]) imply that (1.6) can be rewritten as

$$(1.9) \quad V(t) = i(D \otimes A^+(S_t g_0)A(S_t g_1) - D^+ \otimes A(S_t g_1)^+A(S_t g_0))$$

where  $S_t$  is a unitary group satisfying

$$(1.10) \quad S_t g_0 = S_t^0 e^{-it\omega_0} g_0 \quad S_t g_1 = S_t^0 e^{it\omega_1} g_1.$$

In this paper we shall directly start our research from (1.9) and in certain sense **forget** the motivation of this assumption, i.e. starting from (1.9), we investigate, purely mathematically, the low density limit. Of course one of physically meaningful case of our study is the one with the conditions (1.7) and (1.8). Moreover, we shall suppose that the unitary group  $\{S_t\}_{t \in \mathbf{R}}$  commutes with  $\Delta$ ; there exists a non-zero subset  $K$  of  $H_1$  such that  $g_0, g_1 \in K$ ,

$$(1.11) \quad \int_{\mathbf{R}} |\langle f, S_t g \rangle| dt < \infty, \quad \forall f, g \in K$$

and for each  $f, g \in K$ , the series

$$\sum_{n=1}^{\infty} z^n \cdot \int_{\mathbf{R}} |\langle f, S_t \exp(-\beta n H) g \rangle| dt$$

has a positive convergence radius.

With the condition (1.11), one can define a Hilbert space  $\{K, (\cdot | \cdot)\}$  in same way as [1], where, for each  $f, g \in K$ ,

$$(1.12) \quad (f | g) := \int_{\mathbf{R}} \langle f, S_t g \rangle dt.$$

Inspired by [1], in this paper we shall investigate the limit

$$(1.13) \quad \lim_{z \rightarrow 0} \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, U_{t/z^2} v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle.$$

It will be proved that the limit (1.13) exists and is equal to

$$(1.14) \quad \langle u \otimes W(\chi_{[S, T]} \otimes f) \Psi, U(t)v \otimes W(\chi_{[S', T']}) \otimes f') \Psi \rangle$$

where the scalar product in (1.14) is meant in a Fock quantum Brownian motion in the sense of [1] (cf. also [0]) and  $U(t)$  is a Markovian cocycle satisfying a quantum stochastical differential equation (q.s.d.e.). More precisely, the main result in the present paper is the following:

**THEOREM (1.1).** *For each  $f, f', g_0, g_1 \in K$ ,  $u, v \in H_0$ ,  $D \in B(H_0)$ ,  $S, T, S', T' \in \mathbf{R}$ ,  $t \geq 0$ , if  $t, g_0, g_1$  satisfy the condition*

(1.15)

$$t < \frac{1}{16 \|D\|}; \quad \|g\|_s^2 := \left( \max_{g, g' \in \{g_0, g_1, e^{-\frac{1}{2}\beta H} g_0, e^{-\frac{1}{2}\beta H} g_1\}} \int_{-\infty}^{\infty} |\langle g, S_t g' \rangle| dt \right)^2 < \frac{1}{16 \|D\|}$$

*then the low density limit (1.13) exists and is equal to (1.14) where,  $U(t)$  is the solution of q.s.d.e.*

$$(1.16) \quad \begin{aligned} U(t) = 1 + \sum_{\varepsilon \in \{0, 1\}} \int_0^t & \left[ D_1(\varepsilon) \otimes dN_s(g_\varepsilon, g_{1-\varepsilon}) \right. \\ & \left. + D_2(\varepsilon) \otimes dN_s(g_\varepsilon, g_\varepsilon) + (D_3(\varepsilon) + D_\varepsilon \langle g_{1-\varepsilon}, e^{-\frac{1}{2}\beta H} g_\varepsilon \rangle) \otimes 1 ds \right] U(s) \end{aligned}$$

on  $H_0 \otimes \Gamma(L^2(\mathbf{R}) \otimes (K, (\cdot|\cdot)))$  and

- (i)  $\Psi$  is the vacuum of  $\Gamma(L^2(\mathbf{R}) \otimes (K, (\cdot|\cdot)))$ ;
- (ii)  $N_s(g, g') := N(\chi_{[0,s]} \otimes |g\rangle\langle g'|)$ ;
- (iii) For any operator  $T$  on  $L^2(\mathbf{R}) \otimes K$ ,  $N(T)$  denotes the number operator generated by  $T$  characterized by the condition

$$e^{itN(T)}W(\xi)\Psi = W(e^{itT}\xi)\Psi, \quad \forall \xi \in L^2(\mathbf{R}) \otimes K$$

for  $T$  self-adjoint, and extended by complex linearity to arbitrary  $T$ .

- (iv)  $D_1(\varepsilon)$ ,  $D_2(\varepsilon)$  and  $D_3(\varepsilon)$  are given by (6.80), (6.81) and (6.65) respectively.

*Remark.* Since in the Hilbert space  $\Gamma(L^2(\mathbf{R}) \otimes K)$ , the set  $\{W(\chi \otimes f)\Psi; \chi \in L^2(\mathbf{R}), f \in K\}$  is a total subset, we know that the linear functions

$$\langle u \otimes W(\chi_{[S,T]} \otimes f)\Psi, v \otimes W(\chi_{[S',T']}\otimes f')\Psi \rangle$$

can separate (bounded) operators. Therefore the Theorem (1.1) gives a stochastic process as the low density limit of the time evolution of the original Hamiltonian model.

## §2. Preliminaries

In this section, some preparations will be done for the following sections.

LEMMA (2.1). For each  $f, f' \in K$ ,  $S, S', T, T' \in \mathbf{R}$ ,

$$(2.1) \quad \begin{aligned} & \lim_{z \rightarrow 0} \langle z \int_{S/z^2}^{T/z^2} S_u f du, z \int_{S'/z^2}^{T'/z^2} S'_u f' du \rangle \\ &= \langle \chi_{[S,T]}, \chi_{[S',T']} \rangle_{L^2(\mathbf{R})} \cdot \int_{\mathbf{R}} \langle f, S_t f' \rangle dt. \end{aligned}$$

One can find the proof in [1].

LEMMA (2.2). For each  $n \in \mathbf{N}$ ,  $\{f_k\}_{k=1}^n \subset K$ ,  $\{S_k, T_k\}_{k=1}^n \subset \mathbf{R}$ ,  $\{x_k\}_{k=1}^n \subset \mathbf{R}$ ,

$$(2.2) \quad \begin{aligned} & \lim_{z \rightarrow 0} \langle \Phi_z, W\left(x_1 z \int_{S_1/z^2}^{T_1/z^2} S_{u_1} f_1 du\right) \cdots W\left(x_n z \int_{S_n/z^2}^{T_n/z^2} S_{u_n} f_n du\right) \Phi_z \rangle \\ &= \langle \Psi, W\left(x_1 \chi_{[S_1, T_1]} \otimes f_1\right) \cdots W\left(x_n \chi_{[S_n, T_n]} \otimes f_n\right) \Psi \rangle \end{aligned}$$

and the convergence is uniform for  $\{x_k, S_k, T_k\}_{k=1}^n$  in a bounded set of  $\mathbf{R}$ , where,  $\Psi$  is the vacuum of  $\Gamma(L^2(\mathbf{R}) \otimes (K, (\cdot|\cdot)))$ .

One can find the proof in [1].

Denote  $H_1'$  the conjugate Hilbert space of  $H_1$ , i.e.

$$(2.3) \quad \iota : H_1 \longrightarrow H_1, \quad \iota(\lambda f) := \bar{\lambda} \iota(f)$$

$$(2.4) \quad \langle \iota(f), \iota(g) \rangle_{\iota} := \langle g, f \rangle$$

then,  $H_1'$  is a Hilbert space. It is well known that up to a unitary isomorphism

$$(2.5) \quad \Gamma(H_1) = \Gamma(H_1) \otimes \Gamma(H_1')$$

$$(2.6) \quad W(f) = W(Q_+ f) \otimes W(Q_- f)$$

for each  $f \in H_1$  and

$$(2.7) \quad \Phi_z = \Phi \otimes \Phi'$$

where  $\Phi$ ,  $\Phi'$  are the vacuum vectors in  $\Gamma(H_1)$  and  $\Gamma(H_1')$  respectively and

$$(2.8) \quad Q_+ := \sqrt{\frac{Q+1}{2}} = \sqrt{\frac{1}{2} \cdot \frac{2}{1 - z^2 \exp(-\frac{1}{2}H\beta)}} = \frac{1}{\sqrt{1 - z^2 \exp(-\frac{1}{2}H\beta)}}$$

and

$$(2.9) \quad \begin{aligned} Q_- &:= \iota \sqrt{\frac{Q-1}{2}} = \iota \sqrt{\frac{1}{2} \cdot \frac{2 \exp(-\frac{1}{2}H\beta)}{1 - z^2 \exp(-\frac{1}{2}H\beta)}} \\ &= z\iota \sqrt{\frac{\exp(-\frac{1}{2}H\beta)}{1 - z^2 \exp(-\frac{1}{2}H\beta)}} =: zQ^-. \end{aligned}$$

Moreover, we have

$$(2.10) \quad A(f) = A(Q_+ f) \otimes 1 + 1 \otimes A^+(Q_- f).$$

So up to a unitary isomorphism:

$$\begin{aligned} (2.11) \quad A^+(f)A(g) &= \left( A^+(Q_+ f) \otimes 1 + 1 \otimes A(Q_- f) \right) \cdot \\ &\quad \cdot \left( A(Q_+ g) \otimes 1 + 1 \otimes A^+(Q_- g) \right) \\ &= A^+(Q_+ f)A(Q_+ g) \otimes 1 + z \left( A^+(Q_+ f) \otimes A^+(Q_- g) \right. \\ &\quad \left. + A(Q_+ g) \otimes A(Q_- f) \right) + z^2 1 \otimes A(Q_- f)A^+(Q_- g). \end{aligned}$$

By the CCR, the last term of the right hand side of (2.11) is equal to

$$z^2 1 \otimes \left[ A^+(Q_- g)A(Q_- f) + \langle Q_- f, Q_- g \rangle_{\iota} \right]$$

therefore the right hand side of (2.11) can be rewritten as

$$\begin{aligned}
(2.11a) \quad & A^+(Q_+ f) A(Q_+ g) \otimes 1 \\
& + z \left( A^+(Q_+ f) \otimes A^+(Q_- g) + A(Q_+ g) \otimes A(Q_- f) \right) + \\
& + z^2 \left( 1 \otimes A^+(Q_- g) A(Q_- f) + \langle Q_- f, Q_- g \rangle_c \right) \\
= & :A_0(f, g) + z \left( A_{-1}(f, g) + A_1(f, g) \right) + z^2 A_2(f, g) + z^2 A_{-2}(f, g).
\end{aligned}$$

Our starting point of this paper is, as in [1], the iterative solution of (1.5):

$$(2.12) \quad U_t = \sum_{n=0}^{\infty} (-i)^n \int_0^t dt_1 \cdots \int_0^{tn-1} dt_n V(t_1) \cdots V(t_n).$$

Now, we want to show what is the difference between the Fock and non-Fock cases.

In (2.11a), the term  $A_0(f, g)$  is similar to that in the Fock case and the term  $z^2 A_{\pm 2}(f, g)$  will, roughly speaking, not play any important role. In the term  $z \left( A_{-1}(f, g) + A_1(f, g) \right)$ , if there exists some  $A(Q_- g)$  acting on  $W(z \int_{S/z^2}^{T/z^2} Q_- S_u f du)$  or  $W(z \int_{S'/z^2}^{T'/z^2} Q_- S_u f' du)$ , since  $Q_- = zQ^-$  and  $Q^-$  tends to  $\exp(-\frac{1}{4}\beta H)$  as  $z \rightarrow 0$ , we shall get so “many”  $z$  that the term will go to zero. But the new situation is not the same as that in the Fock case: there it is not possible that all the operators are “used” to produce scalar products, but here is possible. For example, in the case of  $n = 2$ , we can get the following term

$$(2.13) \quad A(S_{t_1} Q_+ g_0) \otimes A(Q_- S_{t_1} g_1) \cdot A^+(S_{t_2} Q_+ g_0) \otimes A^+(Q_- S_{t_2} g_1).$$

From it one can get the following term.

$$(2.14) \quad \langle Q_+ g_0, S_{t_2-t_1} Q_+ g_0 \rangle \cdot \langle Q_- g_1, Q_- S_{t_2-t_1} g_1 \rangle_c.$$

So in the low density limit, the following term will be obtained

$$\begin{aligned}
(2.15) \quad & \lim_{z \rightarrow 0} \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \langle Q_+ g_0, S_{t_2-t_1} Q_+ g_0 \rangle \cdot \langle Q_- g_1, Q_- S_{t_2-t_1} g_1 \rangle_c \\
& \lim_{z \rightarrow 0} \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 z^2 \langle Q_+ g_0, S_{t_2-t_1} Q_+ g_0 \rangle \cdot \langle Q_- g_1, Q_- S_{t_2-t_1} g_1 \rangle_c \\
& \lim_{z \rightarrow 0} \int_0^t dt_1 \int_{-t_1/z^2}^0 dt_2 \langle Q_+ g_0, S_{t_2} Q_+ g_0 \rangle \cdot \langle Q_- g_1, Q_- S_{t_2} g_1 \rangle_c \\
& = \int_0^t dt_1 \int_{-\infty}^0 du \langle g_0, S_u g_0 \rangle \cdot \overline{\langle e^{-\frac{1}{4}\beta H} g_1, S_u e^{-\frac{1}{4}\beta H} g_1 \rangle}.
\end{aligned}$$

In the case of  $n \geq 2$ , one gets similar terms.

### § 3. The collective terms and negligible terms

The section is devoted to distinguish the collective terms from the negligible terms. First of all by (1.20) and (1.7), for each  $n \in \mathbf{N}$ ,  $\varepsilon \in \{0,1\}^n$  up to a unitary isomorphism,

$$\begin{aligned}
(3.1) \quad & A^+(S_{t_1}g_{\varepsilon(1)})A(S_{t_1}g_{1-\varepsilon(1)}) \cdots A^+(S_{t_n}g_{\varepsilon(n)})A(S_{t_n}g_{1-\varepsilon(n)}) \\
& = \left( A^+(S_{t_1}Q + g_{\varepsilon(1)})A(S_{t_1}Q + g_{1-\varepsilon(1)}) \otimes 1 + z \left( A^+(S_{t_1}Q + g_{\varepsilon(1)}) \otimes A^+(Q^- S_{t_1}g_{1-\varepsilon(1)}) \right. \right. \\
& \quad \left. \left. + A(S_{t_1}Q + g_{1-\varepsilon(1)}) \otimes A(Q^- S_{t_1}g_{\varepsilon(1)}) \right) \right. \\
& \quad \left. + z^2 1 \otimes \left( A^+(S_{t_1}Q^- g_{1-\varepsilon(1)})A(Q^- S_{t_1}g_{\varepsilon(1)}) + \langle Q^- g_{\varepsilon(1)}, Q^- g_{1-\varepsilon(1)} \rangle_i \right) \cdot \dots \cdot \right. \\
& \quad \left. \left( A^+(S_{t_n}Q + g_{\varepsilon(n)})A(S_{t_n}Q + g_{1-\varepsilon(n)}) \otimes 1 + z \left( A^+(S_{t_n}Q + g_{\varepsilon(n)}) \otimes A^+(Q^- S_{t_n}g_{1-\varepsilon(n)}) \right. \right. \right. \\
& \quad \left. \left. \left. + A(S_{t_n}Q + g_{1-\varepsilon(n)}) \otimes A(Q^- S_{t_n}g_{\varepsilon(n)}) \right) \right. \\
& \quad \left. + z^2 1 \otimes (A^+(Q^- S_{t_n}g_{1-\varepsilon(n)})A(Q^- S_{t_n}g_{\varepsilon(n)}) + \langle Q^- g_{\varepsilon(n)}, Q^- g_{1-\varepsilon(n)} \rangle_i) \right).
\end{aligned}$$

Expanding the right hand side of (3.1) and using the notations in the right hand side of (1.20a), one can write (3.1) to

$$(3.2) \quad \sum_{\sigma \in \{0, \pm 1, \pm 2\}^n} A_{\sigma(1)}(S_{t_1}g_{\varepsilon(1)}, S_{t_1}g_{1-\varepsilon(1)}) \cdots A_{\sigma(n)}(S_{t_n}g_{\varepsilon(n)}, S_{t_n}g_{1-\varepsilon(n)}) z^{\sum_{k=1}^n |\sigma(k)|}.$$

In order to write (3.2) to a more clear form, let us label  $A_1$  by  $1 \leq i_1 < \dots < i_k \leq n$ ;  $A_{-1}$  by  $1 \leq i'_1 < \dots < i'_{k'} \leq n$ ;  $A_2$  by  $1 \leq i''_1 < \dots < i''_{k''} \leq n$  and  $A_{-2}$  by  $1 \leq i'''_1 < \dots < i'''_{k'''} \leq n$ , then the terms  $A_0$  are naturally labeled by the indices set  $\{1, \dots, n\} \setminus (i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'} \cup (i''_h)_{h=1}^{k''} \cup (i'''_h)_{h=1}^{k'''}$ . Thus (3.2) is equal to the following expression

$$\begin{aligned}
(3.3) \quad & \sum_{k=0}^n \sum_{1 \leq i_1 < \dots < i_k \leq n} \sum_{k'=0}^{n-k} \sum_{\substack{1 \leq i'_1 < \dots < i'_{k'} \leq n \\ (i_h)_{h=1}^k \cap (i'_h)_{h=1}^{k'} = \emptyset}} \sum_{k''=0}^{n-k-k'} \sum_{\substack{1 \leq i''_1 < \dots < i''_{k''} \leq n \\ (i''_h)_{h=1}^{k''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'}) = \emptyset}} \\
& \quad \sum_{k'''=0}^{n-k-k'-k''} \sum_{\substack{1 \leq i'''_1 < \dots < i'''_{k'''} \leq n \\ (i'''_h)_{h=1}^{k'''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'} \cup (i''_h)_{h=1}^{k''}) = \emptyset}} \\
& \quad z^{k+k'+2(k''+k''')} A_0(S_{t_1}g_{\varepsilon(1)}, S_{t_1}g_{1-\varepsilon(1)}) \cdots A_1(S_{t_n}g_{\varepsilon(i_1)}, S_{t_n}g_{1-\varepsilon(i_1)}) \cdots \\
& \quad A_{-1}(S_{t_{i_1}}g_{\varepsilon(i_1)}, S_{t_{i_1}}g_{1-\varepsilon(i_1)}) \cdots A_2(S_{t_{i''_1}}g_{\varepsilon(i''_1)}, S_{t_{i''_1}}g_{1-\varepsilon(i''_1)}) \cdots
\end{aligned}$$

$$\begin{aligned}
& A_1(S_{t_n} g_{\varepsilon(i_k)}, S_{t_n} g_{1-\varepsilon(i_k)}) \cdots A_{-1}(S_{t_{i_k}} g_{\varepsilon(i_{k'})}, S_{t_{i_k}} g_{1-\varepsilon(i_{k'})}) \cdots \\
& A_2(S_{t_{i_k}} g_{\varepsilon(i_{k''})}, S_{t_{i_k}} g_{1-\varepsilon(i_{k''})}) \cdots A_0(S_{t_n} g_{\varepsilon(n)} S_{t_n} g_{1-\varepsilon(n)}) \\
& \prod_{h=1}^{k'''} \langle Q^- g_{\varepsilon(i_h'''')}, Q^- g_{1-\varepsilon(i_h'''')} \rangle_c \\
& = \sum_{k=0}^n \sum_{1 \leq i_1 < \dots < i_k \leq n} \sum_{k'=0}^{n-k} \sum_{\substack{1 \leq i'_1 < \dots < i'_{k'} \leq n \\ (i_h)_{h=1}^k \cap (i'_h)_{h=1}^{k'} = \emptyset}} \sum_{k''=0}^{n-k-k'} \sum_{\substack{1 \leq i''_1 < \dots < i''_{k''} \leq n \\ (i''_h)_{h=1}^{k''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'}) = \emptyset}} \\
& \quad \sum_{k'''=0}^{n-k-k'-k''} \sum_{\substack{1 \leq i'''_1 < \dots < i'''_{k'''} \leq n \\ (i'''_h)_{h=1}^{k'''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'} \cup (i''_h)_{h=1}^{k''}) = \emptyset}} \\
& z^{k+k'+2(k''+k''')} A^+(S_{t_1} Q + g_{\varepsilon(1)}) A(S_{t_1} Q + g_{1-\varepsilon(1)}) \cdots A(S_{t_n} Q + g_{1-\varepsilon(n)}) \\
& \cdots A^+(S_{t_{i_k}} Q + g_{\varepsilon(i_k)}) \cdots A(S_{t_{i_k}} Q + g_{1-\varepsilon(i_k)}) \\
& \cdots A^+(S_{t_{i_k}} Q + g_{\varepsilon(i_{k'})}) \cdots A^+(S_{t_n} Q + g_{\varepsilon(n)}) A(S_{t_n} Q + g_{1-\varepsilon(n)}) \\
& \otimes A(Q^- S_{t_{i_k}} g_{\varepsilon(i_1)}) \cdots A^+(Q^- S_{t_{i_k}} g_{1-\varepsilon(i_1)}) \cdots \\
& A(Q^- S_{t_{i_k}} g_{1-\varepsilon(i_1)}) A^+(Q^- S_{t_{i_k}} g_{\varepsilon(i_1)}) \cdots \\
& A(Q^- S_{t_{i_k}} g_{\varepsilon(i_k)}) \cdots A^+(Q^- S_{t_{i_k}} g_{1-\varepsilon(i_k)}) \cdots \\
& A(Q^- S_{t_{i_k}} g_{1-\varepsilon(i_{k'})}) \cdots A^+(Q^- S_{t_{i_k}} g_{\varepsilon(i_{k'})}) \cdots \\
& A(Q^- S_{t_{i_k}} g_{\varepsilon(i_{k''})}) \cdots A^+(Q^- S_{t_{i_k}} g_{1-\varepsilon(i_{k''})}) \cdots \\
& A(Q^- S_{t_{i_k}} g_{1-\varepsilon(i_{k''}))} \cdots A^+(Q^- S_{t_{i_k}} g_{\varepsilon(i_{k''}))} \cdots \\
& \prod_{h=1}^{k'''} \langle Q^- g_{\varepsilon(i_h'''')}, Q^- g_{1-\varepsilon(i_h'''')} \rangle_c \\
& =: I_n^\varepsilon + II_n^\varepsilon
\end{aligned}$$

where,  $I_n^\varepsilon$  denotes those terms satisfying  $k'' = 0$  and  $II_n^\varepsilon$  denotes those terms satisfying  $k'' \geq 1$ .

Now, we write  $I_n^\varepsilon$  and  $II_n^\varepsilon$  in normally ordered form. Then, one has

LEMMA (3.1). *For each  $n \in N$ ,  $\varepsilon \in \{0, 1\}^n$ ,*

$$\begin{aligned}
(3.4) \quad I_n^\varepsilon &= \sum_{k=0}^n \sum_{1 \leq i_1 < \dots < i_k \leq n} \sum_{k'=0}^{n-k} \sum_{\substack{1 \leq i'_1 < \dots < i'_{k'} \leq n \\ (i_h)_{h=1}^k \cap (i'_h)_{h=1}^{k'} = \emptyset}} \sum_{k''=0}^{n-k-k'} \sum_{\substack{1 \leq i''_1 < \dots < i''_{k''} \leq n \\ (i''_h)_{h=1}^{k''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'}) = \emptyset}} \\
&\quad \sum_{m=0}^{n-k-k'-k''} \sum_{\substack{1 \leq q_1 < \dots < q_m \leq n \\ (q_h)_{h=1}^m \subset (1, \dots, n) \setminus ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'} \cup (i''_h)_{h=1}^{k''})}} \sum_{m'=0}^{k' \wedge (n-k-k''-m)} \sum_{\substack{1 \leq q'_1 < \dots < q'_{m'} \leq i_{k'} \\ (q'_h)_{h=1}^{m'} \subset (i'_h)_{h=1}^{k'}}} \\
&\quad \sum_{(p_1, \dots, p_m, p'_1, \dots, p'_{m'})} z^{k+k'}
\end{aligned}$$

$$\begin{aligned}

& \quad \prod_{\alpha \in \{1, \dots, n\} \setminus ((i_h)_{h=1}^{k'} \cup (i'_{h'})_{h=1}^{k'} \cup (i''_{h''})_{h=1}^{k'''} \cup (q_h)_{h=1}^{m'})} A^+(S_{t_\alpha} Q + g_{\varepsilon(\alpha)}) \\
& \quad \prod_{\alpha \in (i'_{h'})_{h=1}^{k'} \setminus (q'_{h'})_{h=1}^{m'}} A^+(S_{t_\alpha} Q + g_{\varepsilon(\alpha)}) \\
& \quad \prod_{\alpha \in \{1, \dots, n\} \setminus ((i'_h)_{h=1}^{k'} \cup (i''_{h''})_{h=1}^{k'''} \cup (p_h)_{h=1}^{m'} \cup (p'_{h'})_{h=1}^{m'})} A(S_{t_\alpha} Q + g_{1-\varepsilon(\alpha)}) \\
& \quad \otimes \sum_{m'''=0}^{k' \wedge k} \sum_{\substack{1 \leq q_1 < \dots < q_{m''} \leq i'_{k'} \\ (q''_{h''})_{h=1}^{m''} \subset (i'_{h'})_{h=1}^{k'}}} \sum_{(p''_1, \dots, p''_{m''})} \\
& \quad \prod_{h=1}^m \langle Q^- S_{t_h} g_{\varepsilon(p''_h)}, Q^- S_{t_h} g_{1-\varepsilon(q''_h)} \rangle, \\
& \quad \prod_{\alpha \in (i'_{h'})_{h=1}^{k'} \setminus (q''_{h''})_{h=1}^{m''}} A^+(Q^- S_{t_\alpha} g_{1-\varepsilon(\alpha)}) \cdot \prod_{\alpha \in (i_h)_{h=1}^k \setminus (p''_{h''})_{h=1}^{m''}} A(Q^- S_{t_\alpha} g_{\varepsilon(\alpha)}) \\
& \quad z^{2k'''} \prod_{h=1}^{k'''} \langle Q^- g_{1-\varepsilon(i''_h)}, Q^- g_{\varepsilon(i''_h)} \rangle,
\end{aligned}$$

where,  $\sum_{(p_1, \dots, p_m, p'_1, \dots, p'_{m'})}$  means the sum for all  $1 \leq p_1, \dots, p_m, p'_1, \dots, p'_{m'} \leq n$  which satisfy

- (i)  $\{p_h\}_{h=1}^m \cup \{p'_h\}_{h=1}^{m'} \subset \{1, \dots, n\} \setminus ((i_h)_{h=1}^{k'} \cap (i''_{h''})_{h=1}^{k'''})$ ;
  - (ii)  $|\{p_h\}_{h=1}^m \cup \{p'_h\}_{h=1}^{m'}| = m + m'$ ;
  - (iii)  $p_h < q_h$  for all  $h = 1, \dots, m$  and  $p'_h < q'_h$  for all  $h = 1, \dots, m'$ ;
- and  $\sum_{(p''_1, \dots, p''_m)}$  means the sum for all  $1 \leq p''_1, \dots, p''_m \leq n$  satisfying
- (i)  $\{p''_h\}_{h=1}^{m''} \subset \{i_h\}_{h=1}^k$ ;
  - (ii)  $|\{p''_h\}_{h=1}^{m''}| = m''$ ;
  - (iii)  $p''_h < q''_h$  for all  $h = 1, \dots, m''$ .

*Proof.* Notice that the indices  $\{i''_h\}_{h=1}^{k'''}$  label only scalar product terms which can be thought as “normally ordered”, therefore, we can assume, without loss of generality, that  $k''' = 0$ .

By (3.3) and the definition of  $I_n^\varepsilon$  ( $k'' = 0$ ), one has

$$\begin{aligned}
(3.5) \quad I_n^\varepsilon &= \sum_{k=0}^n \sum_{1 \leq i_1 < \dots < i_k \leq n} \sum_{k'=0}^{n-k} \sum_{\substack{1 \leq i'_1 < \dots < i'_{k'} \leq n \\ (i_h)_{h=1}^k \cap (i'_{h'})_{h=1}^{k'} = \emptyset}} z^{k+k'} \\
&\quad \sum_{m=0}^{n-k-k'} C_n(1, m) (A^+ \cdots)_{(n-k-k'-m)}. \\
&\quad \sum_{m'=0}^{k'} C_n(2, m') (A^+ \cdots)_{(k'-m')} \cdot (A \cdots)_{(n-k-k'+k-m-m')}
\end{aligned}$$

$$\otimes \sum_{m'''} C_n(3, m'') (A^+ \cdots)_{(k'-m'')} \cdot (A \cdots)_{(k-m'')}$$

where,  $C_n(1, m)$ ,  $C_n(2, m')$  and  $C_n(3, m'')$  are the products of some scalar products;  $(A^+ \cdots)_{(n-k-k'-m)}$  is the product of the creators which is a  $n - k - k' - m$ 's elements subset of

$$(3.6) \quad \left\{ A^+(S_{t_\alpha} Q^+ g_{\varepsilon(\alpha)}) ; \alpha \in \{1, \dots, n\} \setminus (\{i_h\}_{h=1}^k \cup \{i'_h\}_{h=1}^{k'}) \right\}$$

whose complement is used to produce the scalar products;  $(A^+ \cdots)_{(k'-m')}$  is the product of the creators which is a  $k' - m$ 's elements subset of

$$(3.7) \quad \left\{ A^+(S_{t_h} Q^+ g_{\varepsilon(i'_h)}) \right\}_{h=1}^{k'}$$

whose complement is used to produce the scalar products. So,  $m \leq n - k - k'$  and  $m' \leq k'$ . For each fixed  $m$ , one can use the set  $\{q_h\}_{h=1}^m \subset \{1, \dots, n\} \setminus (\{i_h\}_{h=1}^k \cup \{i'_h\}_{h=1}^{k'})$  to label the set of creators

$$(3.8) \quad \left\{ A^+(S_{t_\alpha} Q^+ g_{\varepsilon(\alpha)}) ; \alpha \in \{1, \dots, n\} \setminus (\{i_h\}_{h=1}^k \cup \{i'_h\}_{h=1}^{k'}) \right\} \setminus (A^+ \cdots)_{(n-k-k'-m)}.$$

Without loss of generality, we can suppose that

$$1 \leq q_1 < \cdots < q_m \leq n.$$

For each fixed  $m'$ , one can use the set  $\{q'_h\}_{h=1}^{m'} \subset \{i'_h\}_{h=1}^{k'}$  to label the set of creators

$$(3.9) \quad \left\{ A^+(S_{t_h} Q^+ g_{\varepsilon(i'_h)}) \right\}_{h=1}^{k'} \setminus (A^+ \cdots)_{(k'-m')}.$$

Without loss of generality, we can suppose that

$$1 \leq q'_1 < \cdots < q'_{m'} \leq n.$$

For each fixed  $m, m'$ ,  $1 \leq q_1 < \cdots < q_m \leq n$ ,  $1 \leq q'_1 < \cdots < q'_{m'} \leq n$ , there is a  $m + m'$ 's elements subset of annihilators

$$(3.10) \quad \left\{ A(S_{t_\alpha} Q^+ g_{\varepsilon(\alpha)}) ; \alpha \in \{1, \dots, n\} \setminus (\{i_h\}_{h=1}^k \cup \{i'_h\}_{h=1}^{k'}) \right\}$$

which is used to produce scalar products with

$$(3.11) \quad \left\{ A^+(S_{t_\alpha} Q^+ g_{\varepsilon(\alpha)}) ; \alpha \in \{1, \dots, n\} \setminus (\{i_h\}_{h=1}^k \cup \{i'_h\}_{h=1}^{k'}) \right\} \setminus \left\{ A^+(S_{t_h} Q^+ g_{\varepsilon(i'_h)}) \right\}_{h=1}^{k'}.$$

If we label the subset by  $\{p_h\}_{h=1}^m$  and  $\{p'_h\}_{h=1}^{m'}$  respectively, then,  $1 \leq p_1, \dots, p_m, p'_1, \dots, p_{m'} \leq n$ ;  $\{p_h\}_{h=1}^m \cup \{p'_h\}_{h=1}^{m'} \subset \{1, \dots, n\} \setminus \{i'_h\}_{h=1}^{k'}$  and  $|\{p_h\}_{h=1}^m \cup \{p'_h\}_{h=1}^{m'}| = m + m'$ . Moreover,  $m + m' \leq n - k'$ , i.e.  $m' \leq n - k' - m$ . So, we obtain the following

$$\begin{aligned}
(3.12) \quad & I_n^\varepsilon = \sum_{k=0}^n \sum_{1 \leq i_1 < \dots < i_k \leq n} \sum_{k'=0}^{n-k} \sum_{\substack{1 \leq i'_1 < \dots < i'_{k'} \leq n \\ (i_h)_{h=1}^{k-1} \cap (i'_h)_{h=1}^{k'} = \emptyset}} \\
& \sum_{m=0}^{n-k-k'} \sum_{\substack{1 \leq q_1 < \dots < q_m \leq n \\ (q_h)_{h=1}^m \subset \{1, \dots, n\} \setminus (i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'}}} \sum_{m'=0}^{k' \wedge (n-k'-m)} \sum_{\substack{1 \leq q'_1 < \dots < q'_{m'} \leq i'_{k'} \\ (q'_h)_{h=1}^{m'} \subset (i'_h)_{h=1}^{k'}}} \\
& \sum_{(p_1, \dots, p_m, p'_1, \dots, p'_{m'})} z^{k+k'} \\
& \prod_{h=1}^m \langle S_{t_{i_h}} Q + g_{1-\varepsilon(p_h)}, S_{t_{i_h}} Q + g_{\varepsilon(q_h)} \rangle \cdot \prod_{h=1}^{m'} \langle S_{t_{i'_h}} Q + g_{1-\varepsilon(p'_h)}, S_{t_{i'_h}} Q + g_{\varepsilon(q'_h)} \rangle \\
& \prod_{\alpha \in \{1, \dots, n\} \setminus ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'} \cup (q_h)_{h=1}^m)} A^+(S_{t_\alpha} Q + g_{\varepsilon(\alpha)}) \\
& \prod_{\alpha \in (i'_h)_{h=1}^{k'} \setminus (q'_h)_{h=1}^{m'}} A^+(S_{t_\alpha} Q + g_{\varepsilon(\alpha)}) \\
& \prod_{\alpha \in \{1, \dots, n\} \setminus ((i'_h)_{h=1}^{k'} \cup (p_h)_{h=1}^m \cup (p'_h)_{h=1}^{m'})} A(S_{t_\alpha} Q + g_{1-\varepsilon(\alpha)}) \\
& \otimes \sum_{m''} C_n(3, m'') (A^+ \cdots)_{(k'-m'')} \cdot (A \cdots)_{(k-m'')}.
\end{aligned}$$

Similarly, we can deal with

$$(3.13) \quad \sum_{m''} C_n(3, m'') (A^+ \cdots)_{(k'-m'')} \cdot (A \cdots)_{(k-m'')}$$

and get that (3.12) is equal to

$$\begin{aligned}
(3.13a) \quad & \sum_{m''=0}^{k' \wedge k} \sum_{\substack{1 \leq q''_1 < \dots < q''_{m''} \leq i'_{k'} \\ (q''_h)_{h=1}^{m''} \subset (i'_h)_{h=1}^{k'}}} \sum_{\substack{p''_1, \dots, p''_{m''} \\ (p''_h)_{h=1}^{m''} \subset (p'_h)_{h=1}^{k'}}} \\
& \prod_{h=1}^{m''} \langle Q^- S_{t_{p''_h}} g_{\varepsilon(p''_h)}, Q^- S_{t_{i''_h}} g_{\varepsilon(q''_h)} \rangle_c \\
& \prod_{\alpha \in (i'_h)_{h=1}^{k'} \setminus (q''_h)_{h=1}^{m''}} A^+(Q^- S_{t_\alpha} g_{1-\varepsilon(\alpha)}) \cdot \prod_{\alpha \in (i_h)_{h=1}^k \setminus (p''_h)_{h=1}^{m''}} A^+(Q^+ S_{t_\alpha} g_{\varepsilon(\alpha)}) \cdot
\end{aligned}$$

Combining together (3.12) and (3.13a), one finishes the proof.

As an application of this Lemma, we can easily obtain the following

COROLLARY (3.2). For each  $n \in \mathbb{N}$ ,  $\varepsilon \in \{0, 1\}^n$ ,  $f, f' \in K, T, S, T', S' \in \mathbf{R}$ ,

$$(3.4) \quad \langle W \left( z \int_{S/z^2}^{T/z^2} Q_+ S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_{F'}^*,$$

$$\begin{aligned}
& \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n I_n^{\varepsilon} \cdot \\
& \cdot W \left( z \int_{S'/z^2}^{T'/z^2} Q_+ S_u f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle \\
& = \sum_{k=0}^n \sum_{1 \leq i_1 < \dots < i_k \leq n} \sum_{k'=0}^{n-k} \sum_{\substack{1 \leq i'_1 < \dots < i'_{k'} \leq n \\ (i_h)_{h=1}^k \cap (i'_h)_{h=1}^{k'} = \emptyset}} \sum_{k'''=0}^{n-k-k'} \sum_{\substack{1 \leq i''_1 < \dots < i''_{k''} \leq n \\ (i''_h)_{h=1}^{k''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'}) = \emptyset}} \\

\end{aligned}$$

COROLLARY (3.3). For each  $n \in \mathbf{N}$ ,  $\varepsilon \in \{0, 1\}^n$ ,  $f, f' \in K, T, S, T', S' \in \mathbf{R}$ ,

$$\begin{aligned}
(3.15) \quad & | \langle W \left( z \int_{S/z^2}^{T/z^2} Q_+ S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\
& \quad \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n I_n^\varepsilon \cdot \\
& \quad \cdot W \left( z \int_{S'/z^2}^{T'/z^2} Q_+ S_u f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle | \leq \\
& \leq \sum_{k=0}^n \sum_{\substack{1 \leq i_1 < \dots < i_k \leq n \\ \{i_h\}_{h=1}^k \cap \{i'_h\}_{h=1}^{k'} = \emptyset}} \sum_{k'=0}^{n-k} \sum_{\substack{1 \leq i'_1 < \dots < i'_{k'} \leq n \\ \{i_h\}_{h=1}^k \cap \{i'_h\}_{h=1}^{k'} = \emptyset}} \sum_{k'''=0}^{n-k-k'} \sum_{\substack{1 \leq i''_1 < \dots < i''_{k''} \leq n \\ \{i_{k'}\}_{h=1}^{k''} \cap \{i_h\}_{h=n}^k = \emptyset \cup \{i'_h\}_{h=1}^{k'} = \emptyset}} \\
& \quad \sum_{m=0}^{n-k-k'-k'''} \sum_{\substack{1 \leq q_1 < \dots < q_m \leq n \\ \{q_h\}_{h=1}^m \subset \{1, \dots, n\} \setminus (\{i_h\}_{h=1}^k \cup \{i'_h\}_{h=1}^{k'} \cup \{i''_h\}_{h=1}^{k''})}} \sum_{m'=0}^{k' \wedge n-k-k'-k''-m} \\
& \quad \sum_{\substack{1 \leq q'_1 < \dots < q'm' \leq i'_{k'} \\ \{q'_h\}_{h=1}^{m'} \subset (\{i'_h\}_{h=1}^{k'})}} \sum_{m''=0}^{k' \wedge k} \sum_{\substack{1 \leq q''_1 < \dots < q''_{m''} \leq i'_{k'} \\ \{q''_h\}_{h=1}^{m''} \subset (\{i'_h\}_{h=1}^{k'})}} \sum_{m'''=0}^{k' \wedge k} \\
& \quad z^{2(n+k+k'-m-m'-2m'')} \cdot C_1^{2(n-m-m'-m'')} \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \\
& \prod_{h=1}^m | \langle S_{t_h} Q + g_{1-\varepsilon(p_h)}, S_{t_{q_h}} Q + g_{\varepsilon(q_h)} \rangle | \cdot \prod_{h=1}^{\bar{m}} | \langle S_{t_h} Q + g_{1-\varepsilon(\alpha_h)}, S_{t_{q_h}} Q + g_{\varepsilon(\beta_h)} \rangle | \\
& \prod_{h=1}^{k'''} | \langle Q^- g_{\varepsilon(i''_h)}, Q^- g_{1-\varepsilon(i''_h)} \rangle_\varepsilon | \cdot \prod_{h=1}^m | \langle Q^- S_{t_h} g_{\varepsilon(p_h)}, Q^- S_{t_{q_h}} g_{1-\varepsilon(q_h)} \rangle_\varepsilon | \\
& | \langle W \left( z \int_{S/z^2}^{T/z^2} Q_+ S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\
& \quad W \left( z \int_{S'/z^2}^{T'/z^2} Q_+ S_u f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle |
\end{aligned}$$

where, here and in the following,

$$(3.16) \quad C_1 := \max_{F=f, f'; G=g_0, g_1; P=Q+, Q^-, I} \int_{-\infty}^{\infty} | \langle PG, S_t PF \rangle | dt$$

and

$$(3.17) \quad \bar{m} := | \{q'_h\}_{h=1}^{m'} \cup \{q''_h\}_{h=1}^{m''} |$$

$$(3.18) \quad \{\beta_h\}_{h=1}^{\bar{m}} = \{q'_h\}_{h=1}^{m'} \cup (\{q''_h\}_{h=1}^{m''} \setminus \{q'_h\}_{h=1}^{m'}).$$

Moreover,  $\{\alpha_h\}_{h=1}^{\bar{m}}$  is chosen in the following way:

$$(3.19) \quad \alpha_h = \begin{cases} p'_{h_0} & \text{if } \beta_h = q'_{h_0}; \\ p''_{h_0} & \text{if } \beta_h = q''_{h_0} \end{cases}$$

With arguments similar to those of the proof of Lemma (3.1), one can get the following

LEMMA (3.4). *For each  $n \in \mathbf{R}$ ,  $\varepsilon \in \{0,1\}^n$ ,*

$$(3.20) \quad \Pi_n^\varepsilon = \sum_{k=0}^n \sum_{1 \leq i_1 < \dots < i_k \leq n} \sum_{k'=0}^{n-k} \sum_{\substack{1 \leq i'_1 < \dots < i'_{k'} \leq n \\ (i_h)_{h=1}^k \cap (i'_h)_{h=1}^{k'} = \emptyset}} \sum_{\substack{n-k-k' \\ k''=1 \\ 1 \leq i''_1 < \dots < i''_{k''} \leq n \\ (i''_h)_{h=1}^{k''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'}) = \emptyset}} \dots$$

$$\sum_{k'''=0}^{n-k-k'} \sum_{\substack{1 \leq i'''_1 < \dots < i'''_{k'''} \leq n \\ (i'''_h)_{h=1}^{k'''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'} \cup (i''_h)_{h=1}^{k''}) = \emptyset}} \dots$$

$$\sum_{m=0}^{n-k-k'-k'''} \sum_{\substack{1 \leq q_1 < \dots < q_m \leq n \\ (q_h)_{h=1}^m \subset \{1, \dots, n\} \setminus ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'} \cup (i''_h)_{h=1}^{k''} \cup (i'''_h)_{h=1}^{k'''})}} \sum_{m'=0}^{k' \wedge (n-k'-k''-k'''-m)} z^{k+k'+2k''}$$

$$\prod_{h=1}^m \langle S_{t_h} Q + g_{1-\varepsilon(p_h)}, S_{t_h} Q + g_{\varepsilon(q_h)} \rangle \cdot \prod_{h=1}^{m'} \langle S_{t_h} Q + g_{1-\varepsilon(p'_h)}, S_{t_h} Q + g_{\varepsilon(q'_h)} \rangle$$

$$\prod_{\alpha \in \{1, \dots, n\} \setminus ((i_h)_{h=1}^k \cup (i''_h)_{h=1}^{k''} \cup (i'''_h)_{h=1}^{k'''})} A^+(S_{t_\alpha} Q + g_{\varepsilon(\alpha)})$$

$$\prod_{\alpha \in \{1, \dots, n\} \setminus ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'} \cup (i''_h)_{h=1}^{k''} \cup (p_h)_{h=1}^m \cup (p'_h)_{h=1}^{m'})} A(S_{t_\alpha} Q + g_{1-\varepsilon(\alpha)})$$

$$\otimes \sum_{d'=0}^{k' \wedge (k+k'')} \sum_{\substack{1 \leq \tilde{q}'_1 < \dots < \tilde{q}'_{d'} \leq i'_{k'} \\ (\tilde{q}'_h)_{h=1}^{d'} \subset (i'_h)_{h=1}^{k'}}} \sum_{d''=0}^{k' \wedge (k+k''-d')} \sum_{\substack{1 \leq \tilde{q}''_1 < \dots < \tilde{q}''_{d''} \leq i''_{k''} \\ (\tilde{q}''_h)_{h=1}^{d''} \subset (i''_h)_{h=1}^{k''}}} \dots$$

$$\sum_{(p'_1, \dots, p'_{d'}, p''_1, \dots, p''_{d''})} \prod_{h=1}^{d''} \langle Q^- S_{t_{p_h}} g_{\varepsilon(p'_h)}, Q^- S_{t_{p_h}} g_{1-\varepsilon(\tilde{q}'_h)} \rangle_c$$

$$\prod_{h=1}^{d''} \langle Q^- S_{t_{p_h}} g_{\varepsilon(p'_h)}, Q^- S_{t_{p_h}} g_{1-\varepsilon(\tilde{q}''_h)} \rangle_c$$

where,

$$(3.22) \quad \bar{d} := \left| \{\bar{q}_h\}_{h=1}^{d'} \setminus \{q_h'\}_{h=1}^{m'} \right|$$

$$(3.23) \quad \{\beta\}_{h=1}^{\bar{d}+d''+m+m'} = \{q_h\}_{h=1}^m \cup \{q_h'\}_{h=1}^{m'} \cup \{\bar{p}_h\}_{h=1}^{d''} \cup \{\bar{\beta}_h\}_{h=1}^{\bar{d}}$$

with

$$(3.24) \quad \{\bar{\beta}_h\}_{h=1}^{\bar{d}} := \{\bar{q}_h\}_{h=1}^{d'} \setminus \{q_h'\}_{h=1}^{m'}.$$

#### §4. The limit of the collective and the Negligible terms

In the section, we shall deal with the limits

$$\begin{aligned}
(4.1) \quad & \lim_{z \rightarrow 0} \langle W \left( z \int_{S/z^2}^{T/z^2} Q_+ S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F^c, \\
& \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n I_n^\varepsilon \cdot \\
& \cdot W \left( z \int_{S'/z^2}^{T'/z^2} Q_+ S_u f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi_F^c \rangle
\end{aligned}$$

and

$$\begin{aligned}
(4.2) \quad & \lim_{z \rightarrow 0} \langle W \left( z \int_{S/z^2}^{T/z^2} Q_+ S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F^c, \\
& \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n II_n^\varepsilon \cdot \\
& \cdot W \left( z \int_{S'/z^2}^{T'/z^2} Q_+ S_u f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi_F^c \rangle
\end{aligned}$$

for fixed  $n \in \mathbb{N}$ .

First of all, we have the following

LEMMA (4.1). For each  $n \in \mathbb{N}$ ,  $0 \leq m \leq n$ ,  $2 \leq q_1 < \cdots < q_m \leq n$ ,  $1 \leq p_1, \dots, p_m \leq n-1$ ,  $p_h < q_h$ ,  $h = 1, \dots, m$ ,  $\{f_h\}_{h=1}^m \subset L^1(\mathbb{R})$ ,

$$(4.3) \quad z^{-2m} \int_0^t dt_1 \cdots \int_0^{t_{n-1}} dt_n \prod_{h=1}^m \left| f_h \left( \frac{t_{q_h} - t_{p_h}}{z^2} \right) \right| \leq \frac{t^{n-m}}{(n-m)!} \prod_{h=1}^m \int_{-\infty}^{\infty} \left| f_h(t) \right| dt$$

as  $z \rightarrow 0$ .

The proof is similar to that of the lemma (3.3) of [1].

LEMMA (4.2). *For each  $n \in \mathbf{N}$ ,  $0 \leq m \leq n$ ,  $f, g \in K$ ,  $2 \leq q_1 < \dots < q_m \leq n$ ,  $1 \leq p_1, \dots, p_m \leq n - 1$ ,  $p_h < q_h$ ,  $h = 1, \dots, m$ ,*

$$(4.4) \quad z^{-2m} \int_0^t dt_1 \cdots \int_0^{t_{n-1}} dt_n \prod_{h=1}^m \left| \langle Q_+ f, S_{\frac{t_n-t_h}{z^2}} Q_+ g \rangle \right| = O(1)$$

as  $z \rightarrow 0$ .

*Remark.* Lemma (4.2) is not a direct corollary of Lemma (4.1) because in (4.4), the operator  $Q_+$  depends on  $z$ .

*Proof.* By the definition, one has

$$Q_+^2 = (1 + z^2 e^{-\frac{1}{2}\beta H})^{-1} = \sum_{p=0}^{\infty} z^{2p} e^{-\frac{1}{2}p\beta H}.$$

So,

$$(4.5) \quad z^{-2m} \int_0^t dt_1 \cdots \int_0^{t_{n-1}} dt_n \prod_{h=1}^m \left| \langle Q_+ f, S_{\frac{t_n-t_h}{z^2}} Q_+ g \rangle \right| \\ \leq \sum_{p=0}^{\infty} z^{2p} \cdot z^{-2m} \int_0^t dt_1 \cdots \int_0^{t_{n-1}} dt_n \prod_{h=1}^m \left| \langle f, S_{\frac{t_n-t_h}{z^2}} e^{-\frac{1}{2}p\beta H} g \rangle \right|.$$

Applying Lemma (4.1) to (4.5), one finds a majorization of the left hand side of (4.5) by

$$(4.5a) \quad \sum_{p=0}^{\infty} z^{2p} \cdot \frac{t^{n-m}}{(n-m)!} \left( \int_{-\infty}^{\infty} |\langle f, S_t e^{-\frac{1}{2}p\beta H} g \rangle| dt \right)^m.$$

Combining together this and the fact that if the series

$$\sum_{n=1}^{\infty} z^n a_n, \quad a_n \geq 0, \quad n = 1, 2, \dots$$

has a positive convergence radius, then for any  $m \in \mathbf{N}$ , the series

$$\sum_{n=1}^{\infty} z^n (a_n)^m, \quad a_n \geq 0, \quad n = 1, 2, \dots$$

also has a positive convergence radius, the proof is ended.

THEOREM (4.3). *For each  $n \in \mathbf{N}$ ,*

$$(4.6) \quad \lim_{z \rightarrow 0} \left\langle W \left( z \int_{S/z^2}^{T/z^2} Q_+ S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F^* \right\rangle$$

$$\int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \Pi_n^\varepsilon.$$

$$\cdot W\left(z \int_{S'/z^2}^{T'/z^2} Q_+ S_u f' du\right) \Phi_F \otimes W\left(z \int_{S'/z^2}^{T'/z^2} Q_- S_u f' du\right) \Phi_F^* = 0.$$

*Proof.* In (3.21), one has

$$(4.7) \quad z^{2(n+k+k'+2k''-2d'-2d''-m-m')} \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n$$

$$\prod_{h=1}^{\bar{d}+d''+m+m'} |\langle S_{t_{ah}} Q + g_{\varepsilon(\alpha_h)}, S_{t_{bh}} Q + g_{1-\varepsilon(\beta_h)} \rangle|$$

$$\leq z^{-2(m+m'+\bar{d}+d'')} \cdot z^{2(k+k'+2k''-\bar{d}-d')} \int_0^t dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n$$

$$\prod_{h=1}^{\bar{d}+d''+m+m'} |\langle Q + g_{\varepsilon(\alpha_h)}, S_{\frac{t_{bh}-t_{ah}}{z^2}} Q + g_{1-\varepsilon(\beta_h)} \rangle|.$$

By definition,  $1 \leq \beta_1 < \cdots < \beta_{\bar{d}+d''+m+m'} \leq n$ , so applying Lemma (4.2) to (4.7), one gets

$$(4.8) \quad z^{-2(m+m'+\bar{d}+d'')} \cdot z^{2(k+k'+2k''+\bar{d}-d')} \int_0^t dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n$$

$$\prod_{h=1}^{\bar{d}+d''+m+m'} |\langle Q + g_{\varepsilon(\alpha_h)}, S_{\frac{t_{bh}-t_{ah}}{z^2}} Q + g_{1-\varepsilon(\beta_h)} \rangle|$$

$$\leq z^{2(k'+k''+\bar{d}-d')} \cdot O(1).$$

Notice that  $d' \leq k'$  and in  $\Pi_n^\varepsilon$ ,  $k'' \geq 1$ , so, the right hand side of (4.8) goes to zero as  $z \rightarrow 0$ .

In the following we shall consider the limit of the right hand side of (3.14). The first step is to show that we need only to consider the situation in which there are the same number of  $A_{-1}$  and  $A_1$ , i.e.  $k = k'$ .

**THEOREM (4.4).** *In the right hand side of (3.15), if  $k \neq k'$ , then*

$$\lim_{z \rightarrow 0} z^{2(n+k+k'-m'-m-2m'')} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n$$

$$\prod_{h=1}^m |\langle S_{t_{ah}} Q + g_{1-\varepsilon(\beta_h)}, S_{t_{bh}} Q + g_{\varepsilon(\alpha_h)} \rangle| \cdot \prod_{h=1}^{\bar{m}} |\langle S_{t_{bh}} Q + g_{1-\varepsilon(\alpha_h)}, S_{t_{ah}} Q + g_{\varepsilon(\beta_h)} \rangle| = 0.$$

*Proof.* With the change of variables

$$(4.10a) \quad z^2 t_j \hookrightarrow t_j, \quad j = 1, \dots, n$$

one has

$$(4.10) \quad z^{2(n+k+k'-m'-m-2m'')} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n$$

$$\begin{aligned}
& \prod_{h=1}^m |\langle S_{t_h} Q + g_{1-\varepsilon(p_h)}, S_{t_h} Q + g_{\varepsilon(q_h)} \rangle| \cdot \prod_{h=1}^{\bar{m}} |\langle S_{t_h} Q + g_{1-\varepsilon(\alpha_h)}, S_{t_h} Q + g_{\varepsilon(\beta_h)} \rangle| \\
&= z^{-2(\bar{m}+m)} \cdot z^{2(k+k'-m'+\bar{m}-2m'')} \cdot \int_0^t dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \\
&\quad \prod_{h=1}^m |\langle Q + g_{1-\varepsilon(p_h)}, S_{\frac{t_{q_h}-t_{p_h}}{z^2}} Q + g_{\varepsilon(q_h)} \rangle| \cdot \prod_{h=1}^{\bar{m}} |\langle Q + g_{1-\varepsilon(\alpha_h)}, S_{\frac{t_{\beta_h}-t_{\alpha_h}}{z^2}} Q + g_{\varepsilon(\beta_h)} \rangle|.
\end{aligned}$$

By the definition one has  $\{\beta_h\}_{h=1}^{\bar{m}} \cap \{q_h\}_{h=1}^m = \emptyset$ , therefore

$$\begin{aligned}
(4.11) \quad & z^{-2(\bar{m}+m)} \cdot \int_0^t dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \prod_{h=1}^m |\langle Q + g_{1-\varepsilon(p_h)}, S_{\frac{t_{q_h}-t_{p_h}}{z^2}} Q + g_{\varepsilon(q_h)} \rangle| \\
&\quad \prod_{h=1}^{\bar{m}} |\langle Q + g_{1-\varepsilon(\alpha_h)}, S_{\frac{t_{\beta_h}-t_{\alpha_h}}{z^2}} Q + g_{\varepsilon(\beta_h)} \rangle| = O(1).
\end{aligned}$$

By the definition (3.17), we obtain that

$$(4.12) \quad \bar{m} \geq m'$$

so,

$$(4.13) \quad k + k' + \bar{m} - m' - 2m'' \geq k + k' - 2m''.$$

If  $k \neq k'$ , then  $2m'' \leq 2(k \wedge k') < k + k'$  and this implies that the right hand side of (4.10) is less or equal to

$$(4.13a) \quad z^{k+k'-2m''} \cdot O(1) \leq z \cdot O(1)$$

and goes to 0 as  $z \rightarrow 0$ .

Our second step is to show that with the condition  $k = k'$ , one needs only to consider the situation in which the projection on the conjugate Fock space of all  $A_{\pm 1}$  are used to produce scalar products in the normally ordered form, i.e. in the notations of Corollary (3.2),  $m'' = k (= k')$ .

**COROLLARY (4.5).** *If in the right hand side of (3.15),  $k = k'$  and  $m'' < k$ , then (4.9) is true also.*

*Proof.* In the present case, by repeating the proof of Theorem (4.4), one finds a majorization of the quantity in the left hand side of (4.9) by

$$(4.13b) \quad z^{k+k'-2m'} \cdot O(1) = z^2 \cdot O(1)$$

this ends the proof.

Theorem (4.4) and Corollary (4.5) show that in the following we need only to consider the limit of

$$\begin{aligned}
(4.14) \quad I_n^{\varepsilon}(1, z, t) := & \sum_{k=0}^{[n/2]} \sum_{\substack{1 \leq i_1 < \dots < i_k \leq n \\ (i_h)_{h=1}^k \cap (i'_h)_{h=1}^k = \emptyset; i_h < i'_h, h=1, \dots, k}} \sum_{\substack{1 \leq i'_1 < \dots < i'_k \leq n \\ (i'_h)_{h=1}^k \cap (i''_h)_{h=1}^k = \emptyset}} \\
& \sum_{k'''=0}^{n-2k} \sum_{\substack{1 \leq i'''_1 < \dots < i'''_{k'''} \leq n \\ (i'''_h)_{h=1}^{k'''} \cap ((i_h)_{h=1}^k \cup (i''_h)_{h=1}^{k'''}) = \emptyset}} \\
& \sum_{m=0}^{n-2k-k'''} \sum_{\substack{1 \leq q_1 < \dots < q_m \leq n \\ (q_h)_{h=1}^m \subset \{1, \dots, n\} \setminus ((i_h, i'_h)_{h=1}^k \cup (i''_h)_{h=1}^{k'''})}} \sum_{m'=0}^{k \wedge (n-k-m-k''')} \sum_{\substack{1 \leq q'_1 < \dots < q'_{m'} \leq i_k \\ (q'_h)_{h=1}^{m'} \subset (i'_h)_{h=1}^k}} \\
& \sum_{(p_1, \dots, p_m, p'_1, \dots, p'_{m'})} z^{2(n-m'-m)} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \\
& \prod_{h=1}^m \langle S_{t_{i_h}} Q + g_{1-\varepsilon(p_h)}, S_{t_{i'_h}} Q + g_{\varepsilon(q_h)} \rangle \cdot \prod_{h+1}^{m'} \langle S_{t_{i_h}} Q + g_{1-\varepsilon(p'_h)}, S_{t_{i'_h}} Q + g_{\varepsilon(q'_h)} \rangle \\
& \prod_{\alpha \in \{1, \dots, n\} \setminus ((i_h, i'_h)_{h=1}^k \cup (q_h)_{h=1}^m)} \int_{S/z^2}^{T/z^2} du \langle S_u Q + f, S_{t_\alpha} Q + g_{\varepsilon(\alpha)} \rangle \\
& \prod_{\alpha \in \{i'_h\}_{h=1}^k \setminus (q'_h)_{h=1}^{m'}} \int_{S/z^2}^{T/z^2} du \langle S_u Q + f, S_{t_\alpha} Q + g_{\varepsilon(\alpha)} \rangle \\
& \prod_{\alpha \in \{1, \dots, n\} \setminus ((i'_h)_{h=1}^k \cup (p_h)_{h=1}^m \cup (p'_h)_{h=1}^{m'})} \int_{S/z^2}^{T/z^2} du \langle S_{t_\alpha} Q + g_{1-\varepsilon(\alpha)}, S_u Q + f' \rangle \\
& \sum_{\sigma \in S'_k} \prod_{h=1}^k \langle Q^- S_{t_{i_{\sigma(h)}}} g_{\varepsilon(i_{\sigma(h)})}, Q^- S_{t_{i_h}} g_{1-\varepsilon(i'_h)} \rangle_\varepsilon \cdot \prod_{h=1}^{k'''} \langle Q^- g_{\varepsilon(i''_h)}, Q^- g_{1-\varepsilon(i''_h)} \rangle_\varepsilon \\
& \langle W \left( z \int_{S/z^2}^{T/z^2} Q + S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\
& W \left( z \int_{S'/z^2}^{T'/z^2} Q + S_u f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle
\end{aligned}$$

where, for each  $\{i_h, i'_h\}_{h=1}^k$ ,  $i_h < i'_h$ ,  $h = 1, \dots, k$ ,

$$(4.15) \quad S'_k := \left\{ \sigma \in S_k : i_{\sigma(h)} < i'_h, h = 1, \dots, k \right\}.$$

*Remark.* In the sum  $\sum_{\substack{1 \leq i_1 < \dots < i_k \leq n \\ (i_h)_{h=1}^k \cap (i'_h)_{h=1}^k = \emptyset; i_h < i'_h, h = 1, \dots, k}}$ , the conditions  $i_h < i'_h$ ,  $h = 1, \dots, k$  due to on the conjugate space, all operators are used to produce scalar products ( $m'' = k$ ), so all creators should be to the right hand side of annihilation

tors.

Stating from (4.14), our third step is to show that those terms in the right hand side of (4.14) in which  $m'' < k$  tend to zero, i.e. one needs only to consider the terms in which the projection on the Fock space (not only the conjugate one) of all  $A_{-1}$  and  $A_1$  are used to produce scalar products in the normally ordered form.

THEOREM (4.6). *In the right hand side of (4.14), if  $m'' < k$ , then the quantity*

$$(4.16) \quad z^{2(n-m-m')} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \\ \prod_{h=1}^m |\langle S_{t_h} Q + g_{1-\varepsilon(p_h)}, S_{t_h} Q + g_{\varepsilon(q_h)} \rangle| \cdot \prod_{h=1}^{m'} |\langle S_{t_h} Q + g_{1-\varepsilon(p'_h)}, S_{t_h} Q + g_{\varepsilon(q'_h)} \rangle| \\ \prod_{h=1}^k |\langle Q - S_{t_{ih}} g_{\varepsilon(i_h)}, Q - S_{t_{ih}} g_{1-\varepsilon(i'_h)} \rangle|$$

tends to zero as  $z \rightarrow 0$ .

*Proof.* With the change of variables (4.10a) and since the product

$$(4.17) \quad \prod_{h=1}^{m'} |\langle S_{t_h} Q + g_{1-\varepsilon(p_h)}, S_{t_h} Q + g_{\varepsilon(q_h)} \rangle|$$

is less than or equal to

$$(2 \|g_0\| \cdot \|g_1\|)^{m'}$$

we know that the left side of (4.16) is equal to

$$z^{2(k-m')} \cdot z^{-2(k+m)} \cdot \int_0^t dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \prod_{h=1}^m |\langle Q + g_{1-\varepsilon(p_h)}, S_{\frac{t_h-t_{ih}}{z^2}} Q + g_{\varepsilon(q_h)} \rangle| \\ \prod_{h=1}^k |\langle \epsilon Q - g_{\varepsilon(i_h)}, S_{\frac{t_h-t_{ih}}{2}} \epsilon Q - g_{1-\varepsilon(i'_h)} \rangle| \cdot O(1).$$

Notice that the sets of indices  $\{q'_h\}_{h=1}^{m'}$  and  $\{i'_h\}_{h=1}^k$  are disjoint and by (4.2), the quantity (4.18) becomes to

$$z^{2(k-m')} \cdot O(1)$$

and it tends to zero if  $m' < k$ .

*Remark.* The proof of Theorem (4.6) can not give the conclusion that  $m = k$  because  $\{q'_h\}_{h=1}^{m'} \subset \{i'_h\}_{h=1}^k$  are NOT disjoint.

Theorem (4.6) shows that  $\{q'_h\}_{h=1}^{m'} = \{i'_h\}_{h=1}^k$  therefore

$$(4.19) \quad \lim_{z \rightarrow 0} I_n^\varepsilon(1, z, t) = \lim_{z \rightarrow 0} I_n^\varepsilon(2, z, t)$$

$$\begin{aligned}
&:= \lim_{z \rightarrow 0} \sum_{k=0}^{\lfloor n/2 \rfloor} \sum_{\substack{1 \leq i_1 < \dots < i_k \leq n \\ (i_h)_{h=1}^k \cap (i'_h)_{h=1}^k = \emptyset; i_h < i'_h, h=1, \dots, k}} \sum_{\substack{1 \leq i'_1 < \dots < i'_{k'} \leq n \\ (i''_h)_{h=1}^{k''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^k) = \emptyset}} \\
&\quad \sum_{k'''=0}^{n-2k} \sum_{\substack{1 \leq i'''_1 < \dots < i'''_{k'''} \leq n \\ (i'''_h)_{h=1}^{k'''} \subset \{1, \dots, n\} \setminus ((i_h, i'_h)_{h=1}^k \cup (i''_h)_{h=1}^{k''})}} \sum_{(p_1, \dots, p_m, p'_1, \dots, p'_k, (i_h)_{h=1}^k)} \\
&\quad \sum_{m=0}^{n-2k-k'''} \sum_{\substack{1 \leq q_1 < \dots < q_m \leq n \\ (q_h)_{h=1}^m \subset \{1, \dots, n\} \setminus ((i_h, i'_h)_{h=1}^k \cup (i''_h)_{h=1}^{k''})}} \sum_{(p_1, \dots, p_m, p'_1, \dots, p'_k, (i_h)_{h=1}^k)} \\
&\quad z^{2(n-k-m)} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \\
&\prod_{h=1}^m \langle S_{t_h}, Q + g_{1-\varepsilon(p_h)}, S_{t_h}, Q + g_{\varepsilon(q_h)} \rangle \cdot \prod_{h=1}^k \langle S_{t_h}, Q + g_{1-\varepsilon(p'_h)}, S_{t_h}, Q + g_{\varepsilon(i'_h)} \rangle \\
&\prod_{\alpha \in \{1, \dots, n\} \setminus ((i_h, i'_h)_{h=1}^k \cup (i''_h)_{h=1}^{k''} \cup (q_h)_{h=1}^m)} \int_{S/z^2}^{T/z^2} du \langle S_u Q + f, S_{t_\alpha} Q + g_{\varepsilon(\alpha)} \rangle \\
&\prod_{\alpha \in (i'_h)_{h=1}^k \setminus (q'_h)_{h=1}^{m'}} \int_{S/z^2}^{T/z^2} du \langle S_u Q + f, S_{t_\alpha} Q + g_{\varepsilon(\alpha)} \rangle \\
&\prod_{\alpha \in \{1, \dots, n\} \setminus ((i'_h)_{h=1}^k \cup (i''_h)_{h=1}^{k''} \cup (p_h)_{h=1}^m (p'_h)_{h=1}^{m'})} \int_{S/z^2}^{T/z^2} du \langle S_{t_\alpha} Q + g_{1-\varepsilon(\alpha)}, S_u Q + f' \rangle \cdot \\
&\sum_{\sigma \in S_k} \prod_{h=1}^k \langle Q - S_{t_{\sigma_h}} g_{\varepsilon(i_{\sigma_h})}, Q - S_{t_h} g_{1-\varepsilon(i'_h)} \rangle_\ell \\
&\quad \prod_{h=1}^{k'''} \langle Q - g_{\varepsilon(i''_h)}, Q - g_{1-\varepsilon(i''_h)} \rangle_\ell \\
&\langle W \left( z \int_{S/z^2}^{T/z^2} Q + S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q - S_u f du \right) \Phi_F^*, \\
&W \left( z \int_{S'/z^2}^{T'/z^2} Q + S_u f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q - S_u f' du \right) \Phi_F^* \rangle
\end{aligned}$$

where,  $\sum_{(p_1, \dots, p_m, p'_1, \dots, p'_k, (i_h)_{h=1}^k)}$  means the sum for all  $1 \leq p_1, \dots, p_m, p'_1, \dots, p'_k \leq n$  which satisfies

- (i)  $(p_h)_{h=1}^m \cup (p'_h)_{h=1}^k \subset \{1, \dots, n\} \setminus ((i'_h)_{h=1}^k \cup (i''_h)_{h=1}^{k''})$ ;
- (ii)  $|(p_h)_{h=1}^m \cup (p'_h)_{h=1}^k| = m + k$ ;
- (iii)  $p_h < q_h$  for all  $h = 1, \dots, m$  and  $p'_h < i'_h$  for all  $h = 1, \dots, k$ .

Our fourth step is to show that we need only to investigate the situation in which

$$(4.20a) \quad p_h = q_h - 1, \quad h = 1, \dots, m$$

and

$$(4.20b) \quad p'_h = i'_h - 1, \quad h = 1, \dots, k.$$

**THEOREM (4.7).** *For each  $m, k$ , those terms of right hand side of (4.19) in which either (4.20a) or (4.20b) does not hold will tend to zero as  $z \rightarrow 0$ .*

*Proof.* We should prove that if there exists a  $h = 1, \dots, m$ , such that  $q_h - p_h \geq 2$  or a  $h = 1, \dots, k$ , such that  $i'_h - p'_h \geq 2$ , then,

$$(4.21) \quad z^{2(n-k-m)} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n$$

$$\prod_{h=1}^m |\langle S_{t_h} Q + g_{1-\varepsilon(p_h)}, S_{t_h} Q + g_{\varepsilon(q_h)} \rangle| \cdot \prod_{h=1}^k |\langle S_{t_h} Q + g_{1-\varepsilon(p'_h)}, S_{t_h} Q + g_{\varepsilon(i'_h)} \rangle| \longrightarrow 0.$$

The fact  $\{q_h\}_{h=1}^m \cap \{i_h\}_{h=1}^k = \emptyset$  implies that the function in (4.21) is made of type II terms in the sense of [1] and therefore the same arguments as those of the proof of Lemma (3.3) imply the Theorem.

Theorem (4.7) shows that

$$(4.22) \quad \begin{aligned} & \lim_{z \rightarrow 0} I_n^\varepsilon(1, z, t) = \lim_{z \rightarrow 0} I_n^\varepsilon(2, z, t) = \lim_{z \rightarrow 0} I_n^\varepsilon(3, z, t) \\ & := \lim_{z \rightarrow 0} \sum_{k=0}^{\lfloor n/2 \rfloor} \sum_{\substack{1 \leq i_1 < \dots < i_k \leq n \\ (i_h)_{h=1}^k \cap (i'_h)_{h=1}^k = \emptyset; (i'_h-1)_{h=1}^k \cap (i'_h)_{h=1}^k = \emptyset; i_h < i'_h, h=1, \dots, k}} \sum_{\substack{1 \leq i'_1 < \dots < i'_k \leq n \\ (i'_h)_{h=1}^k \cap (i_h)_{h=1}^k = \emptyset; (i'_h)_{h=1}^k \cup (i'_h)_{h=1}^k = \emptyset}} \\ & \quad \sum_{k'''=0}^{n-2k} \sum_{\substack{1 \leq i'''_1 < \dots < i'''_k \leq n \\ (i'''_h)_{h=1}^k \cap (i_h)_{h=1}^k \cup (i'_h)_{h=1}^k = \emptyset}} \\ & \quad \sum_{m=0}^{n-2k-k'''} \sum_{\substack{1 \leq q_1 < \dots < q_m \leq n \\ (q_h)_{h=1}^m \subset \{1, \dots, n\} \setminus ((i_h, i'_h)_{h=1}^k \cup (i'''_h)_{h=1}^k); (q_h-1)_{h=1}^m \cap ((i'_h, i'_{h-1})_{h=1}^k \cup (i'''_h)_{h=1}^k) = \emptyset}} \\ & \quad z^{2(n-k-m)} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \\ & \quad \sum_{\sigma \in S_k} \prod_{h=1}^k \langle Q^- S_{t_{\sigma_h}} g_{\varepsilon(i_{\sigma_h})}, Q^- S_{t_h} g_{1-\varepsilon(i_h)} \rangle, \\ & \quad \prod_{h=1}^m \langle S_{t_{h-1}} Q + g_{1-\varepsilon(q_{h-1})}, S_{t_h} Q + g_{\varepsilon(q_h)} \rangle \cdot \prod_{h=1}^k \langle S_{t_{h-1}} Q + g_{1-\varepsilon(i'_h-1)}, S_{t_h} Q + g_{\varepsilon(i'_h)} \rangle \\ & \quad \prod_{\alpha \in \{1, \dots, n\} \setminus ((i_h, i'_h)_{h=1}^k \cup (i'''_h)_{h=1}^k \cup (q_h)_{h=1}^m)} \int_{S/z^2}^{T/z^2} du \langle S_u Q + f, S_{t_\alpha} Q + g_{\varepsilon(\alpha)} \rangle \end{aligned}$$

$$\begin{aligned}
& \prod_{\alpha \in \{1, \dots, n\} \setminus (\{i'_h\}_{h=1}^k \cup \{i''_h\}_{h=1}^{k''} \cup \{q_h - 1\}_{h=1}^m \cup \{i'_h - 1\}_{h=1}^k)} \int_{S'/z^2}^{T'/z^2} du \langle S_u Q + g_{1-\varepsilon(\alpha)}, S_u Q + f' \rangle \cdot \\
& \quad \prod_{h=1}^{k'''} \langle Q^- g_{\varepsilon(i''_h)}, Q^- g_{1-\varepsilon(i''_h)} \rangle_i \\
& \quad \langle W\left(z \int_{S/z^2}^{T/z^2} Q + S_u f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi_F^*, \\
& \quad W\left(z \int_{S'/z^2}^{T'/z^2} Q + S_u f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi_F^* \rangle
\end{aligned}$$

where  $\{i'_h - 1\}_{h=1}^k \cap \{i'_h\}_{h=1}^k = \emptyset$  dues to  $\{p'_h\}_{h=1}^k \subset \{1, \dots, n\} \setminus \{i'_h\}_{h=1}^k$ ;  $\{q_h - 1\}_{h=1}^m \cap \{i'_h - 1, i'_h\}_{h=1}^k = \emptyset$  dues to  $\{p_h\}_{h=1}^m \subset \{1, \dots, n\} \setminus \{i'_h\}_{h=1}^k$  and  $|\{p_h\}_{h=1}^m \cup \{p'_h\}_{h=1}^k| = m + k$ .

*Remark.* In (4.21), we consider the integral of the function

$$\prod_{h=1}^m |\langle S_{t_{p_h}} Q + g_{1-\varepsilon(p_h)}, S_{t_{p_h}} Q + g_{\varepsilon(q_h)} \rangle| \cdot \prod_{h=1}^k |\langle S_{t_{p'_h}} Q + g_{1-\varepsilon(p'_h)}, S_{t_{i'_h}} Q + g_{\varepsilon(i'_h)} \rangle|$$

but not of the function

$$(4.24) \quad \prod_{h=1}^m |\langle S_{t_{p_h}} Q + g_{1-\varepsilon(p_h)}, S_{t_{p_h}} Q + g_{\varepsilon(q_h)} \rangle| \cdot \prod_{h=1}^k |\langle Q^- S_{t_{\sigma(h)}} g_{\varepsilon(t_{\sigma(h)})}, Q^- S_{t_{i'_h}} g_{1-\varepsilon(i'_h)} \rangle_i|$$

this is due to the fact that if in (4.24)  $p_h = q_h - 1$  for any  $h = 1, \dots, m$  but there exists a  $h \in \{1, \dots, k\}$  such that  $i_{\sigma(h)} < i'_h - 1$ , the limit

$$(4.25) \quad \lim_{z \rightarrow 0} z^{2(n-k-m)} \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n$$

$$\begin{aligned}
& \prod_{h=1}^m |\langle S_{t_{p_h}} Q + g_{1-\varepsilon(p_h)}, S_{t_{p_h}} Q + g_{\varepsilon(q_h)} \rangle| \cdot \left| \prod_{h=1}^k |\langle S_{t_{p'_h}} Q + g_{1-\varepsilon(p'_h)}, S_{t_{i'_h}} Q + g_{\varepsilon(i'_h)} \rangle|\right| \\
& \quad \left| \prod_{h=1}^k |\langle Q^- S_{t_{\sigma(h)}} g_{\varepsilon(t_{\sigma(h)})}, Q^- S_{t_{i'_h}} g_{1-\varepsilon(i'_h)} \rangle_i|\right|
\end{aligned}$$

may be not zero. For example,  $n = 4$ ,  $k = 1$ ,  $m = 2$ ,  $i_1 = 1$ ,  $i'_1 = 4$ ,  $q_1 = 2$ ,  $q_1 = 3$ , then, (4.25) becomes

$$\begin{aligned}
(4.26) \quad & \lim_{z \rightarrow 0} z^{2(4-2-1)} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \int_0^{t_2} dt_3 \int_0^{t_3} dt_4 \\
& |\langle S_{t_1} Q + g_{1-\varepsilon(1)}, S_{t_2} Q + g_{\varepsilon(2)} \rangle| \cdot |\langle S_{t_2} Q + g_{1-\varepsilon(2)}, S_{t_3} Q + g_{\varepsilon(3)} \rangle| \cdot \\
& |\langle S_{t_3} Q + g_{1-\varepsilon(3)}, S_{t_4} Q + g_{\varepsilon(4)} \rangle| \cdot |\langle Q^- S_{t_1} g_{\varepsilon(1)}, Q^- S_{t_4} g_{1-\varepsilon(4)} \rangle_i|
\end{aligned}$$

$$\begin{aligned}
&= \lim_{z \rightarrow 0} \int_0^t dt_1 \int_{-t_1/z^2}^0 dt_2 |\langle Q+g_{1-\varepsilon(1)}, S_{t_2}Q+g_{\varepsilon(2)} \rangle| \\
&\quad \int_{-t_1/z^2-t_2}^0 dt_3 |\langle Q+g_{1-\varepsilon(2)}, S_{t_3}Q+g_{\varepsilon(3)} \rangle| \\
&\quad \int_{-t_1/z^2-t_2-t_3}^0 dt_4 |\langle Q+g_{1-\varepsilon(3)}, S_{t_4}Q+g_{\varepsilon(4)} \rangle| \cdot |\langle Q^-g_{\varepsilon(1)}, Q^-S_{t_4+t_3+t_2}g_{1-\varepsilon(4)} \rangle_\epsilon|.
\end{aligned}$$

We shall prove that this kind of limit exists and is, usually, not equal to zero.

Our fifth step is to prove that as  $z \rightarrow 0$  only those terms can remain, in which the set of indices  $\{i_h, i'_h\}_{h=1}^k$  satisfies

$$(4.27) \quad i_1 < i'_1 < \cdots < i_k < i'_k.$$

**THEOREM (4.8).** *In the right hand side of (4.22), those terms in which (4.27) does not hold will tend to zero as  $z \rightarrow 0$ .*

Before proving the theorem we first prove a lemma:

**LEMMA (4.9).** *Suppose that  $f \in L^1(\mathbf{R}_+)$  and is bounded and  $m \geq 3$ , then*

(4.28)

$$z^{-2(m'+1)} \int_0^t dt_1 \cdots \int_0^{t_{m-1}} dt_m f\left(\frac{t_m - t_1}{z^2}\right) f\left(\frac{t_m - t_{m-1}}{z^2}\right) \cdot \prod_{h=1}^{m'} f\left(\frac{t_{q_h} - t_{q_h-1}}{z^2}\right) \rightarrow 0$$

for  $m' < m-2$ , where,  $2 \leq q_1 < \cdots < q_{m'} \leq m-1$ .

*Proof.* If  $q_1 > 2$  or  $q_{m'} < m-1$ , by the boundedness of  $f$ , the left hand side of (4.28) is less or equal to

$$(4.29) \quad C \cdot z^{-2(m'+1)} \int_0^t dt_1 \cdots \int_0^{t_{m-1}} dt_m f\left(\frac{t_m - t_1}{z^2}\right) \cdot \prod_{h=1}^{m'} f\left(\frac{t_{q_h} - t_{q_h-1}}{z^2}\right)$$

where  $C$  is a constant. It is clear that (4.29) is a type II term in the sense of [1], therefore by the same arguments as those of the proof of Lemma (3.3) in [1] (4.28) follows.

Now, suppose that

$$q_1 = 2 \quad q_{m'} = m-1.$$

Introduce the *connected decomposition*

$$\{q_h\}_{h=1}^{m'} = \{q_h\}_{h=1}^{x_1} \cup \{q_h\}_{h=x_1+1}^{x_2} \cup \cdots \cup \{q_h\}_{h=x_{y-1}+1}^{m'}$$

characterized by the following properties:

- (i)  $q_1 = q_2 - 1 = \cdots = q_{x_1} - (x_1 - 1), \dots, q_{x_{y-1}} = q_{x_{y-1}+1} - 1 = \cdots = q_{m'} - (m' - x_{y-1} - 1);$
- (ii)  $q_{x_1} + 1 < q_{x_1+1}, \dots, q_{x_{y-1}} + 1 < q_{x_{y-1}+1}.$

Then, similarly to the proof of Lemma (3.3) of [1], one has

$$\begin{aligned}
 (4.30) \quad & z^{-2(m'+1)} \int_0^t dt_1 \cdots \int_0^{t_{m-1}} dt_m f\left(\frac{t_m - t_1}{z^2}\right) f\left(\frac{t_m - t_{m-1}}{z^2}\right) \cdot \prod_{h=1}^{m'} f\left(\frac{t_{q_h} - t_{q_h-1}}{z^2}\right) \\
 & \leq z^{-2} \int_0^t dt_1 \cdots \int_0^{t'_{q_1-1}} dt'_{q_1-1} \int_{-t'_{q_1-1}/z^2}^0 f(t'_{q_1}) dt'_{q_1} \cdots \\
 & \quad \int_{-t'_{q_1-1}/z^2}^0 f(t_{q_{x_1}}) dt'_{q_{x_1}} \int_0^{t'_{q_1-1}} dt'_{q_{x_1+1}} \\
 & \cdots \int_0^{t'_{q_{x_1+1}-1}} dt'_{q_{x_1+1}-1} \int_{-t'_{q_{x_1+1}-1}/z^2}^0 f(t'_{q_{x_1+1}}) dt'_{q_{x_1+1}} \cdots \int_{-t'_{q_{x_1+1}-1}/z^2}^0 f(t'_{q_{x_2}}) dt'_{q_{x_2}} \cdots \\
 & \quad \int_0^{t'_{q_{x_{y-1}}-1}} dt'_{q_{x_{y-1}}-1} \int_{-t'_{q_{x_{y-1}}-1}/z^2}^0 f(t'_{q_{x_{y-1}}}) dt'_{q_{x_{y-1}}} \cdots \\
 & \int_{-t'_{q_{x_{y-1}}-1}/z^2}^0 f(t'_{q_{m'}}) dt'_{q_{m'}} \int_0^{t'_{q_{x_{y-1}}-1+z^2(t'_{q_{x_{y-1}}+...+t'_{q_{m'}})}} dt_m f\left(\frac{t_m - t_1}{z^2}\right) f\left(\frac{t_m - t_{m-1}}{z^2}\right)
 \end{aligned}$$

where, since  $q_{m'} = m - 1$ , then,

$$t_{m-1} := t'_{q_{x_{y-1}}-1} + z^2(t'_{q_{x_{y-1}}} + \cdots + t'_{q_{m'}}).$$

With the change of variable

$$(4.31) \quad (t_m - t_1)/z^2 = s_m$$

the right hand side of (4.30) is majorized by

$$\begin{aligned}
 (4.32) \quad & C_n \cdot \int_0^t dt_1 \cdots \int_0^{t'_{q_1-1}} dt'_{q_1-1} \int_0^{t'_{q_1-1}} dt'_{q_{x_1+1}} \cdots \\
 & \cdots \int_0^{t'_{q_{x_{y-1}}-1}} dt'_{q_{x_{y-1}}-1} \cdots \int_{-t_1/z^2}^{-\left(t_1-t'_{q_{x_{y-1}}-1}\right)/z^2+t'_{q_{x_{y-1}}+...+t'_{q_{m'}}}} ds_m f(s_m)
 \end{aligned}$$

and this vanishes as  $z \rightarrow 0$ .

*Proof of Theorem (4.8).* It is enough to show that if either there exists a  $h = 1, \dots, k-1$ , such that

$$(4.33) \quad \left| \{i'_h\}_{h=1}^k \cap \{i_h + 1, \dots, i_{h+1} - 1\} \right| \neq 1$$

or there exists a  $h = 1, \dots, k-1$ , such that

$$(4.34) \quad \left| \{i'_h\}_{h=1}^k \cap \{i'_h + 1, \dots, i'_{h+1} - 1\} \right| \neq 1$$

then,

$$(4.35)$$

$$\lim_{z \rightarrow 0} z^{2(n-k-m)} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \prod_{h=1}^m | \langle S_{t_{q_h}}, Q + g_{1-\varepsilon(q_h-1)}, S_{t_{q_h}}, Q + g_{\varepsilon(q_h)} \rangle |$$

$$\prod_{h=1}^k |\langle S_{t_{i_h-1}} Q + g_{1-\varepsilon(i_h-1)}, S_{t_{i_h}} Q + g_{\varepsilon(i_h)} \rangle| \prod_{h=1}^k |\langle Q - S_{t_{i_h}} g_{\varepsilon(i_h)}, Q - S_{t_{i_h}} g_{1-\varepsilon(i_h)} \rangle| = 0.$$

We shall prove (4.35) separately distinguishing 4 cases.

(i) There exists a  $h = 1, \dots, k-1$ , such that

$$(4.36) \quad \left| \{i'_h\}_{h=1}^k \cap \{i_h + 1, \dots, i_{h+1} - 1\} \right| = 0.$$

In this case, denoting by  $h_0$  the minimum  $h$  satisfying (4.36), since  $i_h < i'_h$  and  $i'_h \notin \{i_h\}_{h=1}^k$  for any  $h$ , we have

$$(4.37) \quad i'_{h_0-1} < i_{h_0} < i_{h_0+1} < i'_{h_0}$$

and therefore

$$(4.38) \quad z^{2(n-k-m)} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n$$

$$\prod_{h=1}^m |\langle S_{t_{i_h-1}} Q + g_{1-\varepsilon(i_h-1)}, S_{t_{i_h}} Q + g_{\varepsilon(i_h)} \rangle| \cdot$$

$$\prod_{h=1}^k |\langle S_{t_{i_h-1}} Q + g_{1-\varepsilon(i_h-1)}, S_{t_{i_h}} Q + g_{\varepsilon(i_h)} \rangle| \cdot$$

$$\leq C_n \cdot z^{2(n-k-m)} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n$$

$$\prod_{h=1}^m |\langle S_{t_{i_h-1}} Q + g_{1-\varepsilon(i_h-1)}, S_{t_{i_h}} Q + g_{\varepsilon(i_h)} \rangle| \cdot$$

$$\prod_{h \in \{1, \dots, h_0, \dots, k\}} |\langle S_{t_{i_h-1}} Q + g_{1-\varepsilon(i_h-1)}, S_{t_{i_h}} Q + g_{\varepsilon(i_h)} \rangle| \cdot$$

$$|\langle Q - S_{t_{i_h}} g_{\varepsilon(i_h)}, Q - S_{t_{i_h}} g_{1-\varepsilon(i_h)} \rangle| =: J_n(1, t)$$

where,  $C_n$  is a constant. Now, we shall show that  $J_n(1, t)$  goes to zero as  $z \rightarrow 0$ . In the following, we denote  $\{i'_h\}_{h=1}^k \cup \{q_h\}_{h=1}^m$  as  $\{\bar{q}_h\}_{h=1}^{m+k}$ . By (4.36), one knows that

$$(4.39) \quad \{i'_h, i'_h - 1\}_{h \in \{1, \dots, h_0, \dots, k\}} \cap \{i_{h_0} + 1, \dots, i_{h_0+1} - 1\} = \emptyset.$$

Moreover, with the change of variable (4.10a) and enlarging  $t_{h_0-1}$  to  $t$ , one finds that

$$(4.40) \quad j_n(1, t) = C_n \cdot z^{-2(k+m)} \cdot \int_0^t dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n$$

$$\prod_{h=1}^m |\langle Q + g_{1-\varepsilon(q_h-1)}, S_{\frac{t_{i_h}-t_{i_h-1}}{z^2}} Q + g_{\varepsilon(q_h)} \rangle| \cdot$$

$$\prod_{h \in \{1, \dots, h_0, \dots, k\}} |\langle Q + g_{1-\varepsilon(i_h-1)}, S_{\frac{t_{i_h}-t_{i_h-1}}{z^2}} Q + g_{\varepsilon(i_h)} \rangle|$$

$$\begin{aligned}
& |\langle Q^- g_{\varepsilon(i_{h_0})}, Q^- S_{\frac{t_{i_{h_0}} - t_{i_{h_0}}}{z^2}} g_{1-\varepsilon(i'_{h_0})} \rangle_\epsilon| \\
& \leq C_n \cdot z^{-2(k+m)} \cdot \int_0^t dt_1 \cdots \int_0^{t_{h_0-1}} dt_{h_0-1} \cdot \int_0^t dt_{h_0} \cdots \int_0^{t_{n-1}} dt_n \\
& \quad \prod_{h=1}^m |\langle Q_+ g_{1-\varepsilon(q_{h-1})}, S_{\frac{t_{i_h} - t_{i_h}-1}{z^2}} Q_+ g_{\varepsilon(q_h)} \rangle| \cdot \\
& \quad \prod_{h=1, \dots, h_0, \dots, k} |\langle Q_+ g_{1-\varepsilon(i'_{h-1})}, S_{\frac{t_{i_h} - t_{i_h}-1}{z^2}} Q_+ g_{\varepsilon(i'_h)} \rangle| \\
& \quad |\langle Q^- g_{\varepsilon(i_{h_0})}, Q^- S_{\frac{t_{i_{h_0}} - t_{i_{h_0}}}{z^2}} g_{1-\varepsilon(i'_{h_0})} \rangle_\epsilon|.
\end{aligned}$$

Putting

$$(4.41) \quad p := |\{h \in \{1, \dots, m\} : i_{h_0} < q_h < i'_{h_0}\}|$$

and

$$(4.42) \quad \{\beta_h\}_{h=1}^p := \{q_h : i_{h_0} < q_h < i'_{h_0}, h = 1, \dots, m\}.$$

Then,

$$\begin{aligned}
(4.43) \quad J_n(1, t) & \leq C'_n \cdot z^{-2(p+1)} \cdot \int_0^t dt_{i_{h_0}} \cdots \int_0^{t_{i_{h_0}-1}} dt_{i_{h_0}} \\
& \quad \prod_{h=1}^p |\langle Q_+ g_{1-\varepsilon(\beta_{h-1})}, S_{\frac{t_{i_h} - t_{i_h}-1}{z^2}} Q_+ g_{\varepsilon(\beta_h)} \rangle| \cdot \\
& \quad |\langle Q_+ g_{1-\varepsilon(i'_{h_0}-1)}, S_{\frac{t_{i_h} - t_{i_h}-1}{z^2}} Q_+ g_{\varepsilon(i'_{h_0})} \rangle| \cdot |\langle Q^- g_{\varepsilon(i_{h_0})}, Q^- S_{\frac{t_{i_{h_0}} - t_{i_{h_0}}}{z^2}} g_{1-\varepsilon(i'_{h_0})} \rangle_\epsilon|.
\end{aligned}$$

Applying Lemma (4.8) to the right hand side of (4.43), we know that term goes to zero as  $z \rightarrow 0$ .

(ii) There exists a  $h = 1, \dots, k-1$ , such that

$$(4.44) \quad \left| \{i'_h\}_{h=1}^k \cap \{i_h + 1, \dots, i_{h+1} - 1\} \right| = d \geq 2.$$

In this case, denoting by  $h_0$  the minimum  $h$  satisfying (4.44), then since  $i_h < i'_h$  for any  $h = 1, \dots, k$ , we know that not only  $i'_{h_0} \in \{i_{h_0} + 1, \dots, i_{h_0+1} - 1\}$  but also  $i'_{h_0-1} \in \{i_{h_0} + 1, \dots, i_{h_0+1} - 1\}$ , i.e.

$$(4.45) \quad i_{h_0-1} < i_{h_0} < i'_{h_0-1} < i'_{h_0}.$$

Considering the piece  $i'_{h_0-1}, \dots, i'_{h_0}$ , one gets (4.43) again. This implies (4.35).

(iii) There exists a  $h = 1, \dots, k-1$ , such that

$$(4.46) \quad \left| \{i'_h\}_{h=1}^k \cap \{i'_h + 1, \dots, i'_{h+1} - 1\} \right| = 0.$$

In this case,  $i_{h+1} < i'_h$ , considering the piece  $i_h, \dots, i'_h$ , one gets (4.43) again.

(iv) There exists a  $h = 1, \dots, k-1$ , such that

$$(4.47) \quad \left| \{i_h\}_{h=1}^k \cap \{i'_h + 1, \dots, i'_{h+1} - 1\} \right| \geq 2.$$

In this case, since  $i_h < i'_h$ ,  $h = 1, \dots, k$ , we can write (4.40) as

$$(4.48) \quad \left| \{i_j\}_{j=h+1}^k \cap \{i'_h + 1, \dots, i'_{h+1} - 1\} \right| \geq 2$$

therefore there exist  $h_1, h_2 \in \{h + 1, \dots, k\}$  such that

$$(4.49) \quad i'_h < i_{h_1} < i_{h_2} < i'_{h+1}$$

considering the piece  $i_{h_1}, \dots, i'_{h+1}$ , one gets (4.43) again.

From the above arguments our proof follows.

Summing up, we know that as  $z \rightarrow 0$  the limit of  $I_n^\varepsilon$  is equal to the limit of the following quantity:

$$(4.50) \quad I_n^\varepsilon(4, z, t) := \sum_{k=0}^{[n/2]} \sum_{1 \leq i_1 < i'_1 < \dots < i_k < i'_k \leq n} \sum_{k'''=0}^{n-2k} \sum_{\substack{1 \leq i'''_1 < \dots < i'''_{k'''} \leq n \\ (i''')_{h=1}^k \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^k) = \emptyset}} \sum_{\substack{1 \leq q_1 < \dots < q_m \leq n \\ (q_h)_{h=1}^m \subset \{1, \dots, n\} \setminus ((i_h, i'_h)_{h=1}^k \cup (i'''_h)_{h=1}^{k'''} \cup (q_{h-1})_{h=1}^m \cap ((i_h, i'_{h-1})_{h=1}^k \cup (i'''_h)_{h=1}^{k'''})) = \emptyset}} z^{2(n-k-m)} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \prod_{h=1}^k |\langle Q^- S_{t_h} g_{\varepsilon(i_h)}, Q^- S_{t_h} g_{1-\varepsilon(i'_h)} \rangle_c| \prod_{h=1}^m |\langle S_{t_{h-1}} Q + g_{1-\varepsilon(q_{h-1})}, S_{t_h} Q + g_{\varepsilon(q_h)} \rangle \cdot \prod_{h=1}^k \langle S_{t_{h-1}} Q + g_{1-\varepsilon(i'_{h-1})}, S_{t_h} Q + g_{\varepsilon(i'_h)} \rangle| \prod_{\alpha \in \{1, \dots, n\} \setminus ((i_h)_{h=1}^k \cup (i'''_h)_{h=1}^{k'''} \cup (q_{h-1})_{h=1}^m \cup (i'_{h-1})_{h=1}^k)} \int_{S/z^2}^{T/z^2} du \langle S_u Q + f, S_{t_\alpha} Q + g_{\varepsilon(\alpha)} \rangle \prod_{h=1}^{k'''} \langle Q^- g_{\varepsilon(i'''_h)}, Q^- g_{1-\varepsilon(i'''_h)} \rangle_c \langle W \left( z \int_{S/z^2}^{T/z^2} Q + S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F^c, W \left( z \int_{S'/z^2}^{T'/z^2} Q + S_u f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi_F^c \rangle.$$

Now let us investigate the limit. In order to do this we shall first prove two Lemmata.

LEMMA (4.10). *For each  $m \in \mathbb{N}$ ,  $\{f_h\}_{h=1}^{m+1} \subset L^1(\mathbf{R})$  and bounded, the limit*

(4.51)

$$\lim_{z \rightarrow 0} z^{-2m} \int_0^t dt_1 \cdots \int_0^{t_m} dt_{m+1} f_1 \left( \frac{t_{m+1} - t_1}{z^2} \right) f_{m+1} \left( \frac{t_{m+1} - t_m}{z^2} \right) \cdot \prod_{h=1}^{m-1} f_{h+1} \left( \frac{t_{h+1} - t_h}{z^2} \right)$$

exists.

*Proof.* With the change of variables

$$(4.52) \quad (t_{h+1} - t_h)/z^2 \hookrightarrow t_{h+1}, \quad h = 1, \dots, m$$

we have that

(4.53)

$$\begin{aligned} z^{-2m} \int_0^t dt_1 \cdots \int_0^{t_m} dt_{m+1} f_1 \left( \frac{t_{m+1} - t_1}{z^2} \right) f_{m+1} \left( \frac{t_{m+1} - t_m}{z^2} \right) \cdot \prod_{h=1}^{m-1} f_{h+1} \left( \frac{t_{h+1} - t_h}{z^2} \right) \\ = \int_0^t dt_1 \cdots \int_{-t_1/z^2}^0 dt_2 f_2(t_2) \int_{-t_1/z^2 - t_2}^0 dt_3 f_3(t_3) \cdots \\ \int_{-t_1/z^2 - t_2 - \cdots - t_m}^0 dt_{m+1} f_1(t_{m+1} + \cdots + t_2) f_{m+1}(t_{m+1}) \\ =: M(m, z, t). \end{aligned}$$

Moreover,

$$\begin{aligned} (4.54) \quad & |M(m, z_1, t) - M(m, z_2, t)| \\ & \leq \left| \int_0^t dt_1 \cdots \int_{-t_1/z_1^2}^0 dt_2 f_2(t_2) \int_{-t_1/z_1^2 - t_2}^0 dt_3 f_3(t_3) \cdots \right. \\ & \quad \left. \int_{-t_1/z_1^2 - t_2 - \cdots - t_m}^0 dt_{m+1} f_1(t_{m+1} + \cdots + t_2) f_{m+1}(t_{m+1}) \right. \\ & \quad \left. - \int_0^t dt_1 \cdots \int_{-t_1/z_2^2}^0 dt_2 f_2(t_2) \int_{-t_1/z_2^2 - t_2}^0 dt_3 f_3(t_3) \cdots \right. \\ & \quad \left. \int_{-t_1/z_2^2 - t_2 - \cdots - t_m}^0 dt_{m+1} f_1(t_{m+1} + \cdots + t_2) f_{m+1}(t_{m+1}) \right. \\ & \quad \left. + \int_0^t dt_1 \left| \int_{-t_1/z_2^2}^{-t_1/z_1^2} dt_2 |f_2(t_2)| \right| \cdot \left( \max_{1 \leq h \leq m+1} \int_{-\infty}^0 |f_h| dt \right)^{m-1} \sup_{t \in \mathbf{R}} |f(t)| \right| \\ & \leq \cdots \leq m \cdot \int_0^t dt_1 \left| \int_{-t_1/z_2^2}^{-t_1/z_1^2} dt_2 |f_2(t_2)| \right| \cdot \left( \max_{1 \leq h \leq m+1} \int_{-\infty}^0 |f_h| dt \right)^{m-1} \sup_{t \in \mathbf{R}} |f(t)| \\ & \quad \longrightarrow 0 \end{aligned}$$

as  $z_1, z_2 \rightarrow 0$ . Therefore by the Cauchy principle the proof is finished.

LEMMA (4.11). *With the above symbols and assumptions*

$$(4.55) \quad \lim_{z \rightarrow 0} M(m, z, t) = \int_0^t dt_1 \int_{-\infty}^0 dt_2 f_2(t_2) \cdots \int_{-\infty}^0 dt_m f_m(t_m) \\ \int_{-\infty}^0 dt_{m+1} f_{m+1}(t_{m+1}) f_1(t_{m+1} + \cdots + t_2).$$

*Proof.*

$$(4.56) \quad \left| M(m, z, t) - \int_0^t dt_1 \int_{-\infty}^0 dt_2 f_2(t_2) \cdots \int_{-\infty}^0 dt_{m+1} f_{m+1}(t_{m+1}) f_1(t_{m+1} + \cdots + t_2) \right| \\ \leq \left| \int_0^t dt_1 \cdots \int_{-T}^0 dt_2 f_2(t_2) \int_{-t_1/z_1^2-t_2}^0 dt_3 f_3(t_3) \cdots \right. \\ \left. \int_{-t_1/z_1^2-t_2-\cdots-t_m}^0 dt_{m+1} f_1(t_{m+1} + \cdots + t_2) f_{m+1}(t_{m+1}) \right| \\ - \int_0^t dt_1 \int_{-\infty}^0 dt_2 f_2(t_2) \cdots \int_{-\infty}^0 dt_{m+1} f_{m+1}(t_{m+1}) f_1(t_{m+1} + \cdots + t_2) \\ + C_m \left| \int_0^t dt_1 \int_{-T}^{-t_1/z^2} |f_2(t_2)| dt_2 \right| \\ \leq \left| \int_0^t dt_1 \int_{-T}^0 dt_2 f_2(t_2) \int_{-T}^0 dt_3 f_3(t_3) \int_{-t_1/z_1^2-t_2-t_3}^0 dt_4 f_4(t_4) \cdots \right. \\ \left. \int_{-t_1/z_1^2-t_2-\cdots-t_m}^0 dt_{m+1} f_1(t_{m+1} + \cdots + t_2) f_{m+1}(t_{m+1}) \right| \\ - \int_0^t dt_1 \int_{-\infty}^0 dt_2 f_2(t_2) \cdots \int_{-\infty}^0 dt_{m+1} f_{m+1}(t_{m+1}) f_1(t_{m+1} + \cdots + t_2) \\ + C_m \left| \int_0^t dt_1 \int_{-T}^0 |f_2(t_2)| dt_2 \int_{-T}^{-t_1/z^2-t_2} |f_3(t_3)| dt_3 \right| \\ + C_m \left| \int_0^t dt_1 \int_{-T}^{-t_1/z^2} |f_2(t_2)| dt_2 \right| \\ \leq \cdots \leq \cdots \\ \leq C_m \left| \int_0^t dt_1 \int_{-T}^{-t_1/z^2} |f_2(t_2)| dt_2 \right| \\ + C_m \left| \int_0^t dt_1 \int_{-T}^0 |f_2(t_2)| dt_2 \int_{-T}^{-t_1/z^2-t_2} |f_3(t_3)| dt_3 \right| \\ + \cdots + \\ + C_m \left| \int_0^t dt_1 \int_{-T}^0 |f_2(t_2)| dt_2 \int_{-T}^0 |f_3(t_3)| dt_3 \cdots \right|$$

$$\begin{aligned}
& \left| \int_{-T}^{-t_1/z^2-t_2-\dots-t_m} |f_{m+1}(t_{m+1})| dt_{m+1} \right| \\
& + \left| \int_0^t dt_1 \int_{-T}^0 dt_2 f_2(t_2) \cdots \int_{-T}^0 dt_{m+1} f_{m+1}(t_{m+1}) f_1(t_{m+1} + \dots + t_2) - \right. \\
& \left. - \left| \int_0^t dt_1 \int_{-\infty}^0 dt_2 f_2(t_2) \cdots \int_{-\infty}^0 dt_{m+1} f_{m+1}(t_{m+1}) f_1(t_{m+1} + \dots + t_2) \right| \right|
\end{aligned}$$

where,

$$(4.57) \quad C_m := \left( \max_{h=1,\dots,m+1} \int_{-\infty}^0 |f_h(t)| dt \vee \max_{h=1,\dots,m+1} \sup_{t \in \mathbf{R}} |f_h(t)| \vee 1 \right)^m.$$

For each  $\eta > 0$ , we take  $T$  such that

$$(4.58) \quad \max_{h=1,\dots,m} \int_{-\infty}^{-T} |f_h(t)| dt < \eta$$

then,

$$(4.59)$$

$$\begin{aligned}
& \lim_{z \rightarrow 0} \left| M(m, z, t) - \int_0^t dt_1 \int_{-\infty}^0 dt_2 f_2(t_2) \cdots \int_{-\infty}^0 dt_{m+1} f_{m+1}(t_{m+1}) f_1(t_{m+1} + \dots + t_2) \right| \\
& \leq \eta \cdot t(C_m + C_m^2 + \dots + C_m^m)
\end{aligned}$$

this shows the validity of (4.55).

Using the two Lemmata, we can make our sixth step:

THEOREM (4.12).

$$\begin{aligned}
& \lim_{z \rightarrow 0} I_n^\varepsilon = \sum_{k=0}^{[n/2]} \sum_{1 \leq i_1 < i'_1 < \dots < i_k < i'_k \leq n} \sum_{k'''=0}^{n-2k} \sum_{\substack{1 \leq i'''_1 < \dots < i'''_k \leq n \\ (i'''_h)_{h=1}^{k'''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^k) = \emptyset}} \\
& \sum_{\substack{m=0 \\ (q_h)_{h=1}^m \subset \{1, \dots, n\} \setminus ((i_h, i'_h)_{h=1}^k \cup (i''_h)_{h=1}^{k'''}); (q_h-1)_{h=1}^m \cap ((i'_h, i'_h-1)_{h=1}^k \cup (i''_h)_{h=1}^{k'''})) = \emptyset}} \sum_{1 \leq q_1 < \dots < q_m \leq n} \\
& \int_{0 \leq t_{n-1} \leq \dots \leq \widehat{t_{i'_k}} \leq \dots \leq \widehat{t_{q_m}} \leq \dots \leq \widehat{t_{q_1}} \leq \dots \leq \widehat{t_{i'_1}} \leq \dots \leq t_i \leq t} dt_1 \dots \widehat{dt}_{i'_1} \dots \widehat{dt}_{q_1} \dots \widehat{dt}_{q_m} \dots \widehat{dt}_{i'_k} \dots dt_n \\
& (4.60) \quad \prod_{h=1}^k M(\varepsilon, i_h, i'_h, \{q_h\}_{h=1}^m) \cdot N(\varepsilon, \{i_{h+1}, i'_h\}_{h=0}^k, \{q_h\}_{h=1}^m) \\
& \prod_{h=1}^{k'''} \langle g_{1-\varepsilon(i''_h)}, e^{-\frac{1}{2}\beta H} g_{\varepsilon(i''_h)} \rangle \cdot \langle W(\chi_{|S, T|} \otimes f) \Psi, W(\chi_{|S', T'|} \otimes f') \Psi \rangle
\end{aligned}$$

with

$$(4.61) \quad M(\varepsilon, i_h, i'_h, \{q_h\}_{h=1}^m) := \int_{-\infty}^0 dt_{i_h+1} \dots \int_{-\infty}^0 dt_{i'_h}$$

$$\prod_{\alpha=0}^{i_h-i_{h-1}-1} \langle g_{1-\varepsilon(i_h+\alpha)}, S_{t_{\alpha+\alpha+1}} g_{\varepsilon(i_h+\alpha+1)} \rangle \overline{\langle g_{\varepsilon(i_h)}, S_{t_h+\dots+t_{\alpha+1}} e^{-\frac{1}{2}\beta H} g_{1-\varepsilon(i'_h)} \rangle}.$$

Moreover, denoting

$$(4.62) \quad \{\beta_h\}_{h=1}^{\bar{m}} := \{q_h : q_h \notin \bigcup_{h=1}^k \{i_n + 1, \dots, i'_h - 1\}, h = 1, \dots, m\}$$

$$(4.63) \quad \bar{m} = m - \sum_{h=1}^k (i'_h - i_h - 1)$$

then  $\{\beta_h\}_{h=1}^{\bar{m}}$  has the connected decomposition

$$(4.64) \quad \{\beta_h\}_{h=1}^{\bar{m}} = \{\beta_h\}_{h=1}^{r_1} \cup \{\beta_h\}_{h=r_1+1}^{r_2} \cup \dots \cup \{\beta_h\}_{h=r_{x-1}+1}^{r_x}$$

the quantity  $N\{\varepsilon, \{i_{h+1}, i'_h\}_{h=0}^k, \{q_h\}_{h=1}^m\}$  is defined by the following expression:

$$(4.65) \quad \begin{aligned} & \prod_{\alpha \in \{1, \dots, n\} \setminus ((i'_h, i_h)_{h=1}^k \cup (i'''_h)_{h=1}^{k'''} \cup (q_h)_{h=1}^m)} (f | g_{\varepsilon(\alpha)}) \cdot \chi_{|S, T|}(t_\alpha) \\ & \prod_{\alpha \in \{(1, \dots, n)\} \setminus ((i'_h, i'_h-1)_{h=1}^k \cup (i'''_h)_{h=1}^{k'''} \cup (q_h-1)_{h=1}^m) \cap \{1, \dots, \beta_{1-2}\}} (g_{1-\varepsilon(\alpha)} | f') \cdot \chi_{|S', T'|}(t_\alpha) \\ & \cdot \chi_{|S', T'|}(t_{\beta_{1-1}}) (g_{1-\varepsilon(\beta_{r_1})} | f') \\ & \prod_{\alpha \in \{(1, \dots, n)\} \setminus ((i'_h, i'_h-1)_{h=1}^k \cup (i'''_h)_{h=1}^{k'''} \cup (q_h-1)_{h=1}^m) \cap \{\beta_{r_1+1}, \dots, \beta_{r_{x-1}+1-2}\}} (g_{1-\varepsilon(\alpha)} | f') \cdot \chi_{|S', T'|}(t_\alpha) \\ & \dots \dots \\ & \cdot \chi_{|S', T'|}(t_{\beta_{r_{x-1}+1-1}}) (g_{1-\varepsilon(\beta_{r_x})} | f') \\ & \prod_{\alpha \in \{(1, \dots, n)\} \setminus ((i'_h, i'_h-1)_{h=1}^k \cup (q_h-1)_{h=1}^m) \cap \{\beta_{r_{x+1}+1}, \dots, n\}} (g_{1-\varepsilon(\alpha)} | f') \cdot \chi_{|S', T'|}(t_\alpha). \end{aligned}$$

*Proof.* Using Lemma (4.11), the proof of the lemma (3.4) in [1] and dominated convergence, it is enough to show for each subset  $R_z$  of  $\mathbf{R}$ , and  $\xi, \eta \in K$ ,

$$(4.66) \quad \lim_{z \rightarrow 0} \int_{R_z} \langle Q_+ \xi, S_t Q_+ \eta \rangle dt = \lim_{z \rightarrow 0} \int_{R_z} \langle \xi, S_t \eta \rangle dt.$$

In fact

$$(4.67) \quad \begin{aligned} & \left| \int_{R_z} \langle Q_+ \xi, S_t Q_+ \eta \rangle dt - \int_{R_z} \langle \xi, S_t \eta \rangle dt \right| \\ & \leq \int_{R_z} \left| \langle Q_+ \xi, S_t Q_+ \eta \rangle - \langle \xi, S_t \eta \rangle \right| dt \end{aligned}$$

and

$$(4.68) \quad Q_+^2 = (1 - z^2 e^{-\frac{1}{2}\beta H})^{-1} = \sum_{n=0}^{\infty} z^{2n} e^{-\frac{1}{2}\beta n H}.$$

So,

$$(4.69) \quad \int_{R_z} \left| \langle Q_+ \xi, S_t Q_+ \eta \rangle - \langle \xi, S_t \eta \rangle \right| dt \leq z^2 \sum_{n=1}^{\infty} z^{2(n-1)}$$

$$\times \int_{-\infty}^{\infty} |\langle \xi, S_t e^{-\frac{1}{2}\beta n H} \eta \rangle| dt = z^2 \cdot O(1) \longrightarrow 0$$

## §5. The uniform estimate

Having investigated the low density limit term by term, the present section will be devoted to study the uniform estimate.

Applying (3.24), (3.25) to (3.22), it will be obtained that

$$\begin{aligned}
(5.1) \quad & | \langle W \left( z \int_{S/z^2}^{T/z^2} Q + S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- - S_u f du \right) \Phi_F^\epsilon, \\
& \quad \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n (I_n^\epsilon + II_n^\epsilon) \cdot \\
& \quad \cdot W \left( z \int_{S'/z^2}^{T'/z^2} Q + S_u f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- - S_u f' du \right) \Phi_F^\epsilon \rangle | \leq \\
& \leq \sum_{k=0}^n \sum_{1 \leq i_1 < \dots < i_k \leq n} \sum_{k'=0}^{n-k} \sum_{\substack{1 \leq i'_1 < \dots < i'_{k'} \leq n \\ (i_h)_{h=1}^{k'} \cap (i'_h)_{h=1}^{k'} = \emptyset}} \sum_{k''=0}^{n-k-k'} \sum_{\substack{1 \leq i''_1 < \dots < i''_{k''} \leq n \\ (i''_h)_{h=1}^{k''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'}) = \emptyset}} \\
& \quad \sum_{k'''=0}^{n-k-k'-k''} \sum_{\substack{1 \leq i'''_1 < \dots < i'''_{k'''} \leq n \\ (i'''_h)_{h=1}^{k'''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'} \cup (i''_h)_{h=1}^{k''}) = \emptyset}} \\
& \quad \sum_{m=0}^{n-k-k'-k''-k'''} \sum_{m'=0}^{k' \wedge (n-k'-k''-k'''-m)} \sum_{d'=0}^{k' \wedge (k+k')} \sum_{d''=0}^{k'' \wedge (k-k''-d')} \sum_{d=0}^{d'} (d' - \bar{d})! \\
& \quad C_1^{2(n-m-m'-d'-d'')} \cdot z^{2(n-m-m'-d'-d''+k'+k'')} \cdot \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \\
& \quad \prod_{h=1}^{d+d''+m+m'} |\langle PS_{t_{h+1}} g_{1-\epsilon(\alpha_h)}, PS_{t_h} g_{\epsilon(\beta_h)} \rangle| \\
& \quad | \langle W \left( z \int_{S/z^2}^{T/z^2} Q + S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- - S_u f du \right) \Phi_F^\epsilon, \\
& \quad W \left( z \int_{S'/z^2}^{T'/z^2} Q + S_u f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- - S_u f' du \right) \Phi_F^\epsilon \rangle |
\end{aligned}$$

where, the factor  $(d' - \bar{d})$  is due to the fact that all the elements in

$$\{p_h\}_{h=1}^m \cup \{p'_h\}_{h=1}^{m'} \cup \{\tilde{p}_h\}_{h=1}^{d'} \cup \{\tilde{p}'_h\}_{h=1}^{d''} \setminus \{\alpha_h\}_{h=1}^{d+d''+m+m'}$$

being chose freely and  $P = Q_+$  or  $Q^-$ .

In the following, for each  $n \in \mathbf{N}$  and  $\epsilon \in \{0, 1\}^n$ , we denote the left hand side

of (5.1) by  $\Delta(n, \varepsilon, t)$  then, one has

THEOREM (5.1). *For each  $n \in \mathbf{N}$ ,*

$$(5.2) \quad \Delta(n, \varepsilon, t) \leq n^5 \cdot 8^n \max_{0 \leq m \leq n} \left( \|g\|_s + o_z(1) \right)^{2m} t^{n-m}$$

where,  $o_z(1)$  tends to zero as  $z \rightarrow 0$  and  $\|g\|_s^2$  is defined in (1.15).

*Proof.* Put

$$(5.3) \quad f(t) := \sum_{\varepsilon \in \{0,1\}} \max_{P=Q_+,\ell^{-1}Q_-} \left| \langle Pg_\varepsilon, S_t Pg_\varepsilon \rangle \right|$$

then,

$$(5.4) \quad \int_{-\infty}^{\infty} f(t) dt = \sum_{\varepsilon \in \{0,1\}} \max_{P=Q_+,\ell^{-1}Q_-} \int_{-\infty}^{\infty} \left| \langle Pg_\varepsilon, S_t Pg_\varepsilon \rangle \right| dt$$

this is controlled by

$$(5.5) \quad 2 \cdot \|g\|_s^2 + o_z(1)$$

for  $z$  small enough. Moreover,  $f$  is a bounded symmetric function, therefore using Lemma (9.1) of [0] to the quantity

$$\begin{aligned} & \sum_{\substack{1 \leq \alpha_1, \dots, \alpha_h \leq n; \alpha_h < \beta_h, h=1, \dots, \bar{d} + d'' + m + m' \\ (\alpha_h)_{h=1}^{\bar{d} + d'' + m + m' \subset (1, \dots, n) \setminus ((i'_h)_{h=1}^{k'} \cup (i''_h)_{h=1}^{k''})}} z^{2(n-m-m'-d'-d''+k'+k'')} \\ & \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \prod_{h=1}^{\bar{d} + d'' + m + m'} \left| \langle S_{t_{\alpha_h}} Pg_{1-\varepsilon(\alpha_h)}, S_{t_{\beta_h}} Pg_{\varepsilon(\beta_h)} \rangle \right| \end{aligned}$$

we find that

$$\begin{aligned} (5.6) \quad \Delta(n, \varepsilon, t) & \leq \sum_{k=0}^n \sum_{1 \leq i_1 < \dots < i_k \leq n} \sum_{k'=0}^{n-k} \sum_{1 \leq i'_1 < \dots < i'_{k'} \leq n} \sum_{k''=0}^{n-k-k'} \sum_{\substack{1 \leq i''_1 < \dots < i''_{k''} \leq n \\ (i_h)_{h=1}^k \cap (i'_h)_{h=1}^{k'} = \emptyset \\ (i''_h)_{h=1}^{k''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'}) = \emptyset}} \\ & \sum_{k''=0}^{n-k-k'-k''} \sum_{\substack{1 \leq i'''_1 < \dots < i'''_{k'''} \leq n \\ (i'''_h)_{h=1}^{k'''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'} \cup (i''_h)_{h=1}^{k''}) = \emptyset}} \\ & \sum_{m'=0}^{n-k-k''-k'''} \sum_{m'=0}^{k' \wedge (n-k'-k''-k''')-m} \sum_{d'=0}^{k' \wedge (k+k'')} \sum_{d''=0}^{k'' \wedge (k+k''-d')} \sum_{\bar{d}=0}^{d'} \\ & \sum_{\substack{1 \leq \beta_1 < \dots < \beta_{\bar{d}+d''+m+m'} \leq n \\ (\beta_h)_{h=1}^{\bar{d}+d''+m+m' \subset (1, \dots, n) \setminus ((i_h)_{h=1}^k \cup (i'''_h)_{h=1}^{k''''})}} 2^{n-k-k'''} (d' - \bar{d})! \cdot c_1^{2(n-m-m'-d'-d'')} \cdot z^{2(k'+k''+\bar{d}-d')} \\ & \frac{t^{n-\bar{d}-d''-m-m'}}{(n - \bar{d} - d'' - m - m')!} \cdot \left( \|g\|_s + o_z(1) \right)^{2(\bar{d}+d''+m+m')} \end{aligned}$$

where,

$$c_1 := 1 + \max_{\varepsilon \in \{0,1\}; Q' = -\frac{1}{2}\beta H, 1; F = f, f'} \int_{-\infty}^{\infty} |\langle g_{\varepsilon}, S_t Q' F \rangle| dt.$$

Notice that the set

$$\{p_h\}_{h=1}^m \cup \{\bar{p}_h\}_{h=1}^{m'} \cup \{\tilde{p}_h\}_{h=1}^{d'} \cup \{\bar{\tilde{p}}_h\}_{h=1}^{d''}$$

labels the annihilation operator which are used to produce scalar products, therefore we should have at least  $m + m' + d' + d''$  creators, but each fixed time corresponds to two operators, this implies that

$$(5.8) \quad m + m' + d' + d'' + m + m' + d' + d'' \leq 2n$$

i.e.

$$(5.8a) \quad m + m' + d' + d'' \leq n$$

therefore,

$$\begin{aligned} & \frac{(d' - d)! \cdot c_1^{2(n-m-m'-d'-d'')} \cdot z^{2(k'+k''+d-d')}}{(n - \bar{d} - d'' - m - m')!} \\ & \leq \frac{(d' - d)! \cdot c_1^{2(n-m-m'-d'-d'')}}{(n - d' - d'' - m - m' + (d' - \bar{d}))!} \\ (5.9) \quad & \leq \frac{c_1^{2(n-m-m'-d'-d'')}}{(n - d' - d'' - m - m')!} = O(1). \end{aligned}$$

Moreover, the sum

$$\sum_{m=0}^{n-k-k'-k''-k'''} \sum_{m'=0}^{k' \wedge (n-k'-k''-k'''-m)} \sum_{d'=0}^{k' \wedge (k+k'')} \sum_{d''=0}^{k'' \wedge (k+k''-d')} \sum_{d=0}^{d'}$$

is less than  $n^5$  and

$$\begin{aligned} (5.10) \quad & \sum_{k=0}^n \sum_{1 \leq i_1 < \dots < i_k \leq n} \sum_{k'=0}^{n-k} \sum_{\substack{1 \leq i'_1 < \dots < i'_{k'} \leq n \\ (i_h)_{h=1}^{k'} \cap (i'_h)_{h=1}^{k'} = \emptyset}} \sum_{\substack{k''=0 \\ 1 \leq i''_1 < \dots < i''_{k''} \leq n \\ (i''_h)_{h=1}^{k''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'}) = \emptyset}} \sum_{\substack{n-k-k' \\ k'''=0 \\ 1 \leq i'''_1 < \dots < i'''_{k'''} \leq n \\ (i'''_h)_{h=1}^{k'''} \cap ((i_h)_{h=1}^k \cup (i'_h)_{h=1}^{k'} \cup (i''_h)_{h=1}^{k''}) = \emptyset}} 2^{n-k-k'''} \\ & = \sum_{k=0}^n 2^{n-k} \binom{n}{k} \sum_{k'=0}^{n-k} \binom{n-k}{k'} \sum_{k''=0}^{n-k-k'} \binom{n-k-k'}{k''} \sum_{k'''=0}^{n-k-k'-k''} \binom{n-k-k'-k''}{k'''} 2^{-k'''} \\ & = \sum_{k=0}^n 2^{n-k} \binom{n}{k} \sum_{k'=0}^{n-k} \binom{n-k}{k'} \sum_{k''=0}^{n-k-k'} \binom{n-k-k'}{k''} (3/2)^{n-k-k'-k''} \end{aligned}$$

$$\begin{aligned}
&= \sum_{k=0}^n 2^{n-k} \binom{n}{k} \sum_{k'=0}^{n-k} \binom{n-k}{k'} (5/2)^{n-k-k'} \\
&= \sum_{k=0}^n 2^{n-k} \binom{n}{k} (7/2)^{n-k} = \sum_{k=0}^n \binom{n}{k} 7^{n-k} = 8^n
\end{aligned}$$

so the proof is finished.

THEOREM (5.2). *For each  $r \in \{0, \pm 1, \pm 2\}$ ,  $\sigma \in \{0, 1\}$ ,*

$$\begin{aligned}
(5.11) \quad &| \langle W \left( z \int_{S/z^2}^{T/z^2} Q_+ S_u f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\
&\frac{1}{z^2} \cdot z^{|r|} A_r(S_{t/z^2} g_\sigma, S_{t/z^2} g_{1-\sigma}) \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n (I_n^\varepsilon + II_n^\varepsilon) \cdot \\
&\cdot W \left( z \int_{S'/z^2}^{T'/z^2} Q_+ S_u f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle | \leq \\
&\leq n^6 \cdot 8^n \max_{0 \leq m \leq n} \left( \|g\|_s + o_z(1) \right)^{2m} t^{n-m}.
\end{aligned}$$

*Proof.* The proof is almost the same as ones of Theorem (5.1) and the difference is only replacing

$$\begin{aligned}
&\frac{t^{n-\bar{d}-d''-m-m'}}{(n-\bar{d}-d''-m-m')!} \\
\text{by } &\frac{t^{n-\bar{d}-d''-m-m'-1}}{(n-\bar{d}-d''-m-m'-1)!}
\end{aligned}$$

## §6. The low density limit and its properties

In the section we shall

- i) prove that the limit (1.13) exists and formulate its explicit form;
- ii) find a differential (or integro) equation satisfied by the limit (1.13).

THEOREM (6.1). *For each  $g_0, g_1 \in K$ ,  $t \geq 0$ ,  $D \in B(H_0)$  satisfying (1.15), and each  $f, f' \in K$ ,  $S, T, S', T'' \in \mathbf{R}$ ,  $u, v \in H_0$ , the low density limit*

$$(6.1) \quad \lim_{z \rightarrow 0} \langle u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u f du \right) \Phi_z, U_{t/z^2} v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u f' du \right) \Phi_z \rangle$$

*exists and is equal to*

$$(6.2) \quad \sum_{n=0}^{\infty} \sum_{\alpha \in \{0, 1\}} \langle u, D_{\varepsilon(1)} \cdots D_{\varepsilon(n)} v \rangle$$

$$\begin{aligned}
& \sum_{k=0}^{[n/2]} \sum_{1 \leq i_1 < \dots < i_k < i'_k \leq n} \sum_{l=1}^{n-2k} \sum_{\substack{1 \leq j_1 < \dots < j_l \leq n \\ (j_h)_{h=1}^l \subset \{1, \dots, n\} \setminus ((i_h, i'_h)_{h=1}^k)}} \\
& \sum_{m=\sum_{h=1}^k (i'_h - i_h - 1)}^{n-2k-l} \sum_{\substack{1 \leq q_1 < \dots < q_m \leq n \\ (q_h)_{h=1}^m \subset \{1, \dots, n\} \setminus ((i_h, i'_h)_{h=1}^k \cup (j_h)_{h=1}^l; (q_h-1)_{h=1}^m \cap ((i'_h, i'_h-1)_{h=1}^k = \emptyset)}} \\
& \int_{0 \leq t_{n-1} \leq \dots \leq \widehat{t_{i'_k}} \leq \dots \leq \widehat{t_{q_m}} \leq \dots \leq \widehat{t_{q_1}} \leq \dots \leq \widehat{t_{i'_1}} \leq \dots \leq t_1 \leq t} dt_1 \cdots \widehat{dt_{i'_1}} \cdots \widehat{dt_{q_1}} \cdots \widehat{dt_{q_m}} \cdots \widehat{dt_{i'_k}} \cdots dt_n \\
& \prod_{h=1}^k M(\varepsilon, i_h, i'_h, \{q_h\}_{h=1}^m) \cdot N(\varepsilon, \{i_{h+1}, i'_h\}_{h=0}^k, \{q_h\}_{h=1}^m) \\
& \prod_{h=1}^l \langle g_{\varepsilon(j_h)}, g_{1-\varepsilon(j_h)} \rangle \langle W(\chi_{|S,T|} \otimes f) \Psi, W(\chi_{|S',T'|} \otimes f') \Psi' \rangle
\end{aligned}$$

where,  $M(\varepsilon, i_h, i'_h, \{q_h\}_{h=1}^m)$ ,  $h = 1, \dots, m$  and  $N(\varepsilon, \{i_{h+1}, i'_h\}_{h=0}^k, \{q_h\}_{h=1}^m)$  are defined in (4.61) and (4.65).

*Proof.*

$$\begin{aligned}
(6.3) \quad & \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, U_{t/z^2} v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle \\
& = \sum_{n=0}^{\infty} \sum_{\varepsilon \in (0,1)} \langle u, D_{\varepsilon(1)} \cdots D_{\varepsilon(n)} v \rangle \\
& \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, \int_0^{t/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \\
& A^+(S_{t_1} g_{\varepsilon(1)}) A(S_{t_1} g_{1-\varepsilon(1)}) \cdots A^+(S_{t_n} g_{\varepsilon(n)}) A(S_{t_n} g_{1-\varepsilon(n)}) v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle.
\end{aligned}$$

By the uniform estimate,

$$\begin{aligned}
(6.4) \quad & \lim_{z \rightarrow 0} \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, U_{t/z^2} v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle \\
& = \sum_{n=0}^{\infty} \sum_{\alpha \in (0,1)} \langle u, D_{\varepsilon(1)} \cdots D_{\varepsilon(n)} u \rangle \\
& \lim_{z \rightarrow 0} \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, \int_0^{t'/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n \\
& A^+(S_{t_1} g_{\varepsilon(1)}) A(S_{t_1} g_{1-\varepsilon(1)}) \cdots A^+(S_{t_n} g_{\varepsilon(n)}) A(S_{t_n} g_{1-\varepsilon(n)}) v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle.
\end{aligned}$$

Applying Theorem (4.12) to (6.4), we finish the proof at once.

This theorem shows that for each  $u, v \in H_0$ , there exists a  $G(t) \in H_0$ , such that

$$(6.5) \quad \langle u, G(t) \rangle \\ = \lim_{z \rightarrow 0} \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, U_{t/z^2} v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle.$$

For each  $z > 0$ , defining

$$(6.6) \quad \langle u, G_z(t) \rangle \\ := \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, U_{t/z^2} v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle$$

then

$$(6.7) \quad \langle u, G(0) \rangle = \lim_{z \rightarrow 0} \langle u, G_z(0) \rangle = \\ = \lim_{z \rightarrow 0} \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle \\ = \langle u, v \rangle \langle W(\chi_{|S, T|} \otimes f) \Psi, W(\chi_{|S', T'|} \otimes f') \Psi \rangle.$$

So,

$$(6.8) \quad \langle u, G(t) \rangle = \lim_{z \rightarrow 0} \langle u, G_z(t) \rangle = \langle u, G(0) \rangle \\ + \lim_{z \rightarrow 0} \int_0^t \frac{d}{ds} \langle u, G_z(s) \rangle ds.$$

Moreover, for each  $z > 0$ ,  $n \in \mathbf{N}$ ,

$$(6.9) \quad \left| \frac{d}{ds} \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, \int_0^{s/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n V(t_1) \cdots V(t_n) v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle \right| = \\ = \left| \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, \int_0^{s/z^2} dt_2 \int_0^{t_2} dt_3 \cdots \int_0^{t_{n-1}} dt_n \frac{1}{z^2} V(s/z^2) V(t_2) \cdots V(t_n) v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle \right|.$$

Hence from Theorem (5.2) follows that

$$(6.10) \quad \frac{d}{ds} \langle u, G_z(s) \rangle = \sum_{n=1}^{\infty} \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, \frac{d}{ds} \int_0^{s/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n (-i)^n V(t_1) \cdots V(t_n) v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle$$

$$\begin{aligned}
&= \sum_{n=1}^{\infty} \frac{-i}{z^2} \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, \\
V(s/z^2) &\int_0^{s/z^2} dt_2 \int_0^{t_2} dt_3 \cdots \int_0^{t_{n-1}} dt_n (-i)^{n-1} V(t_2) \cdots V(t_n) \\
&\quad v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle \\
&= \frac{-i}{z^2} \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_z, V(s/z^2) U_{s/z^2} v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi_z \rangle.
\end{aligned}$$

Moreover, by expanding  $V$  to the sum of the products of creation and annihilation operators according to (1.15) and (1.10), we find that

$$\begin{aligned}
(6.11) \quad &\frac{d}{ds} \langle u, G_z(s) \rangle = \frac{1}{z^2} \langle u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q_+ f du\right) \Phi_F \\
&\quad \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F \rangle \\
&\quad \sum_{\varepsilon \in \{0,1\}} D_\varepsilon \otimes \left( A^+(S_{s/z^2} Q_+ g_\varepsilon) A(S_{s/z^2} Q_+ g_{1-\varepsilon}) \otimes 1 \right. \\
&\quad z \cdot A^+(S_{s/z^2} Q_+ g_\varepsilon) \otimes A^+(Q^- S_{s/z^2} g_{1-\varepsilon}) + z \cdot A(S_{s/z^2} Q_+ g_{1-\varepsilon}) \otimes A(Q^- S_{s/z^2} g_\varepsilon) \\
&\quad \left. + z^2 1 \otimes (A^+(Q^- S_{s/z^2} g_{1-\varepsilon}) A(Q^- S_{s/z^2} g_\varepsilon) + \langle Q^- g_\varepsilon, Q^- g_{1-\varepsilon} \rangle_i) \right) U_{s/z^2} \\
&\quad v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} S_u Q^- f' du\right) \Phi'_F \rangle \\
&:= \frac{1}{z^2} I_z + \frac{1}{z} II_z + \frac{1}{z} III_z + IV_z.
\end{aligned}$$

Now our first step is to deal with  $\frac{1}{z^2} I_z$ . We split  $\frac{1}{z^2} I_z$  into a sum of two terms, one of them corresponds to the case of the creator  $A^+(S_{s/z^2} Q_+ g_\varepsilon)$  acting on the coherent vector  $W(z \int_{S/z^2}^{T/z^2} S_u Q_+ f du) \Phi_F$  and the annihilation operator  $A^+(S_{s/z^2} Q_+ g_{1-\varepsilon})$  acting on the coherent vector  $W(z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du) \Phi'_F$ ; the other one corresponds to the case of the creator  $A^+(S_{s/z^2} Q_+ g_\varepsilon)$  acting on the coherent vector  $W(z \int_{S/z^2}^{T/z^2} S_u Q_+ f du) \Phi_F$  and the annihilation operator  $A^+(S_{s/z^2} Q_+ g_{1-\varepsilon})$  commuting with the operator  $U_{s/z^2}$ , i.e.

(6.12)

$$\frac{1}{z^2} I_z = \sum_{\varepsilon \in \{0,1\}} \langle D_\varepsilon^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q_+ f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F \rangle$$

$$\begin{aligned}
& \int_{S/z^2}^{T/z^2} \langle S_u Q + f, S_{S/z^2} Q + g_\varepsilon \rangle du \cdot \int_{S'/z^2}^{T'/z^2} \langle S_{S/z^2} Q + g_{1-\varepsilon}, S_u Q + f' \rangle du \cdot U_{S/z^2} \\
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle + \\
& + \sum_{\varepsilon \in \{0, 1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F \rangle + \\
& \frac{1}{z} \int_{S/z^2}^{T/z^2} \langle S_u Q + f, S_{S/z^2} Q + g_\varepsilon \rangle du \cdot [1 \otimes A(S_{S/z^2} Q + g_{1-\varepsilon}) \otimes, U_{S/z^2}] \\
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle \\
& := I_z(a) + I_z(b).
\end{aligned}$$

It is obvious that

$$(6.13) \quad \lim_{z \rightarrow 0} I_z(a) = \sum_{\varepsilon \in \{0, 1\}} \chi_{|S, T|}(s)(f | g_\varepsilon) \cdot \chi_{|S', T'|}(s)(g_{1-\varepsilon} | f') \langle D_\varepsilon^+ u, G(s) \rangle \text{ a.e.}$$

Moreover denoting for each  $n \in \mathbf{N}$ ,

$$\begin{aligned}
I_z(n, a) &:= \sum_{\varepsilon \in \{0, 1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \\
&\quad \times \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\
& \int_{S/z^2}^{T/z^2} \langle S_u Q + f, S_{S/z^2} Q + g_\varepsilon \rangle du \cdot \int_{S'/z^2}^{T'/z^2} \langle S_{S/z^2} Q + g_{1-\varepsilon}, S_u Q + f' \rangle du \cdot \\
& \quad \int_0^{S/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_{n-1}} dt_n V(t_1) \cdots V(t_n) \\
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle
\end{aligned}$$

then the limit  $\lim_{z \rightarrow 0} I_z(n, a)$  exists.

In order to obtain the limit

$$(6.14) \quad \lim_{z \rightarrow 0} I_z(b)$$

we need the following

LEMMA (6.2). *The limit*

$$(6.15) \quad \lim_{z \rightarrow 0} \sum_{\varepsilon \in \{0, 1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F,$$

$$\frac{1}{z} \left[ 1 \otimes A(S_{s/z^2} Q + g_{1-\varepsilon}) \otimes 1, U_{s/z^2} \right] \\ v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi_F^\epsilon \rangle$$

exists.

*Proof.* By the uniform estimate (Theorem (5.2)), it is enough to show that for each  $n \in \mathbb{N}$ ,

$$(6.16) \quad \lim_{z \rightarrow 0} \sum_{\varepsilon \in \{0,1\}} \left\langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F^\epsilon, \right. \\ \left. \int_0^{s/z^2} dt_1 \cdots \int_0^{t_{n-1}} dt_n \frac{1}{z} (-i)^n \left[ 1 \otimes A(S_{s/z^2} Q + g_{1-\varepsilon}) \otimes 1, V(t_1) \cdots V(t_n) \right] \right. \\ \left. v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi_F^\epsilon \right\rangle$$

exists.

Denoting the limit (6.16) by

$$(6.17) \quad \lim_{z \rightarrow 0} J(n, z, s)$$

let us prove the lemma by induction.

First of all,

$$(6.18) \quad J(1, z, s) = \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \left\langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F^\epsilon, \right. \\ \left. \int_0^{s/z^2} dt_1 D_{\varepsilon(1)} \otimes \frac{1}{z} \left[ A(S_{s/z^2} Q + g_{1-\varepsilon}) \otimes 1, \right. \right. \\ \left. \left. \left( A^+(S_{t_1} Q + g_{\varepsilon(1)}) A(S_{t_1} Q + g_{1-\varepsilon(1)}) \otimes 1 + \right. \right. \right. \\ \left. \left. \left. z \left( A^+(S_{t_1} Q + g_{\varepsilon(1)}) \otimes A^+(Q^- S_{t_1} g_{1-\varepsilon(1)}) + A(S_{t_1} Q + g_{1-\varepsilon(1)}) \otimes A(Q^- S_{t_1} g_{\varepsilon(1)}) \right) + \right. \right. \right. \\ \left. \left. \left. + z^2 1 \otimes (\langle Q^- S_{t_1} g_{\varepsilon(1)}, Q^- S_{t_1} g_{1-\varepsilon(1)} \rangle + A^+(Q^- S_{t_1} g_{1-\varepsilon(1)}) A(Q^- S_{t_1} g_{\varepsilon(1)})) \right) \right] \right\rangle \\ v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi_F^\epsilon \rangle \\ := J_1(1, z, s) + J_2(1, z, s) + J_3(1, z, s) + J_4(1, z, s).$$

Notice that  $J_3(1, z, s) = J_4(1, z, s) = 0$ , now let us investigate the first two

terms.

$$\begin{aligned}
(6.19) \quad J_1(1, z, s) &= \sum_{\varepsilon, \varepsilon(1) \in \{0, 1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u, v \rangle \\
&\quad \langle W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F, \int_0^{s/z^2} dt_1 \frac{1}{z} \left[ A(S_{s/z^2} Q + g_{1-\varepsilon}), A^+(S_{t_1} Q + g_{\varepsilon(1)}) \right] \\
&\quad \langle A(S_{t_1} Q + g_{1-\varepsilon(1)}) W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \rangle \\
&\quad \langle W \left( z \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F, W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi_F \rangle, \\
&= \sum_{\varepsilon, \varepsilon(1) \in \{0, 1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u, v \rangle \\
&\quad \int_0^{s/z^2} dt_1 \langle S_{s/z^2} Q + g_{1-\varepsilon}, S_{t_1} Q + g_{\varepsilon(1)} \rangle \int_{S'/z^2}^{T'/z^2} \langle S_{t_1} Q + g_{1-\varepsilon(1)}, S_u Q + f' \rangle du \\
&\quad \langle W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F, W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \rangle \\
&\quad \langle W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F, W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi_F \rangle.
\end{aligned}$$

With the change of variable

$$(6.19a) \quad t_1 - s/z^2 = s_1$$

the right hand side of (6.19) becomes

$$\begin{aligned}
(6.20) \quad &\sum_{\varepsilon, \varepsilon(1) \in \{0, 1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u, v \rangle \\
&\int_{-s/z^2}^0 ds_1 \langle Q + g_{1-\varepsilon}, S_{s_1} Q + g_{\varepsilon(1)} \rangle \int_{S'/z^2}^{T/z^2} \langle S_{s_1+s/z^2} Q + g_{1-\varepsilon(1)}, S_u Q + f' \rangle du \\
&\quad \langle W \left( z \int_{S/z^2}^{T/z^2} S_u f du \right) \Phi_z, W \left( z \int_{S'/z^2}^{T'/z^2} S_u f' du \right) \Phi_z \rangle.
\end{aligned}$$

Again with the change of variable

$$(6.21) \quad u - s_1 - s/z^2 = v$$

(6.20) becomes

$$\begin{aligned}
(6.22a) \quad &\sum_{\varepsilon, \varepsilon(1) \in \{0, 1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u, v \rangle \\
&\int_{-s/z^2}^0 ds_1 \langle Q + g_{1-\varepsilon}, S_{s_1} Q + g_{\varepsilon(1)} \rangle \int_{(S'-s)/z^2-s_1}^{(T'-s)/z^2-s_1} \langle Q + g_{1-\varepsilon(1)}, S_u Q + f' \rangle dv \\
&\quad \langle W \left( z \int_{S/z^2}^{T/z^2} S_u f du \right) \Phi_z, W \left( z \int_{S'/z^2}^{T'/z^2} S_u f' du \right) \Phi_z \rangle
\end{aligned}$$

which tends to

$$(6.22) \quad \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u, v \rangle \int_{-\infty}^0 ds_1 \langle g_{1-\varepsilon}, S_{s_1} g_{\varepsilon(1)} \rangle (g_{1-\varepsilon(1)} | f') \cdot \chi_{[S', T']} (s) \\ \langle W(\chi_{[S, T]} \otimes f) \Psi, W(\chi_{[S', T']} \otimes f') \Psi \rangle.$$

Moreover,

$$(6.23) \quad J_2(1, z, s) = \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \\ \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q_+ f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F, \\ \int_0^{s/z^2} dt_1 1 \otimes \left[ A(S_{s/z^2} Q + g_{1-\varepsilon}), A^+(S_{t_1} Q + g_{\varepsilon(1)}) \right] \otimes A^+(Q^- S_{t_1} g_{1-\varepsilon(1)}) \\ v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \\ = \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u, v \rangle \\ z^2 \int_{S/z^2}^{T/z^2} \langle Q^- S_u f, Q^- S_{t_1} g_{1-\varepsilon(1)} \rangle \epsilon du \int_0^{s/z^2} dt_1 \langle S_{s/z^2} Q + g_{1-\varepsilon}, S_{t_1} Q + g_{\varepsilon(1)} \rangle \\ \langle W\left(z \int_{S/z^2}^{T/z^2} S_u f du\right) \Phi_Q, W\left(z \int_{S'/z^2}^{T'/z^2} S_u f' du\right) \Phi'_Q \rangle.$$

With the same change of variables (6.19) and (6.21), one knows that the right hand side of (6.23) is equal to  $z^2 \cdot O(1)$  and tends to zero.

Assuming that the limit (6.16) exists for  $n$ , let see the situation in  $n+1$ . By the same arguments as in (6.17), one can write  $J(n+1, z, s)$  as a sum of  $J_1(n+1, z, s)$  and  $J_2(n+1, z, s)$ , where

$$(6.24) \quad J_1(n+1, z, s) := \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \\ \langle D_\varepsilon^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q_+ f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F, \\ \int_0^{s/z^2} dt_1 \cdots \int_0^{t_n} dt_{n+1} D_{\varepsilon(1)} \otimes \frac{1}{z} \left[ A(S_{s/z^2} Q + g_{1-\varepsilon}), A^+(S_{t_1} Q + g_{\varepsilon(1)}) \right] \\ A(S_{t_1} Q + g_{1-\varepsilon(1)}) \otimes 1 V(t_2) \cdots V(t_{n+1}) (-i)^n \\ v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle$$

and

$$(6.25) \quad J_2(n+1, z, s) := \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}}$$

$$\begin{aligned}
& \langle D_\varepsilon^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q + f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F, \\
& \int_0^{s/z^2} dt_1 \int_0^{t_1} dt_2 \cdots \int_0^{t_n} dt_{n+1} D_{\varepsilon(1)} \otimes [A(S_{s/z^2} Q + g_{1-\varepsilon}), A^+(S_{t_1} Q + g_{\varepsilon(1)})] \\
& 1 \otimes 1 \otimes A^+(Q^- S_{t_1} g_{1-\varepsilon}) V(t_2) \cdots V(t_{n+1}) (-i)^n \\
& v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle.
\end{aligned}$$

In (6.25), we apply the creator  $A^+(Q^- S_{t_1} g_{1-\varepsilon})$  to the coherent vector

$$W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F$$

and change of variable

$$(6.26) \quad t_1 - s/z^2 =: t'$$

one finds that the module of  $J_2(n+1, z, s)$  is less than or equal to

$$\begin{aligned}
(6.27) \quad & \sum_{\varepsilon, \varepsilon(1) \in \{0, 1\}} \left| \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q + f du\right) \Phi_F \right. \\
& \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F, \int_{-s/z^2}^0 dt' \langle Q + g_{1-\varepsilon}, S_{t'} Q + g_{\varepsilon(1)} \rangle \\
& z^2 \int_{S/z^2}^{T/z^2} \langle Q^- S_u f, Q^- S_{t'-s/z^2} g_{1-\varepsilon} \rangle, \int_0^{t'+s/z^2} dt_2 \cdots \int_0^{t_n} dt_{n+1} V(t_2) \cdots V(t_{n+1}) \\
& v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle \Big| \\
& = z^2 \cdot O(1) \longrightarrow 0.
\end{aligned}$$

In the formula (6.24), the term  $[A(S_{s/z^2} Q + g_{1-\varepsilon}), A^+(S_{t_1} Q + g_{\varepsilon(1)})]$  is equal to the scalar product  $\langle S_{s/z^2} Q + g_{1-\varepsilon}, S_{t_1} Q + g_{\varepsilon(1)} \rangle$  and the operator

$$1 \otimes A(S_{t_1} Q + g_{1-\varepsilon}) \otimes 1 V(t_2) \cdots V(t_{n+1})$$

is equal to the sum of the following two terms:

$$(6.28a) \quad V(t_2) \cdots V(t_{n+1}) 1 \otimes A(S_{t_1} Q + g_{1-\varepsilon}) \otimes 1$$

and

$$(6.28b) \quad [1 \otimes A(S_{t_1} Q + g_{1-\varepsilon}) \otimes 1, V(t_2) \cdots V(t_{n+1})]$$

therefore

$$\begin{aligned}
(6.29) \quad J_1(n+1, z, s) = & \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \\
& \langle D_\varepsilon^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q_+ f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F, \\
& (-i)^n \int_0^{s/z^2} dt_1 \cdots \int_0^{t_n} dt_{n+1} D_{\varepsilon(1)} \otimes \frac{1}{z} \langle S_{s/z^2} Q_+ g_{1-\varepsilon}, S_{t_1} Q_+ g_{\varepsilon(1)} \rangle \\
& \left( V(t_2) \cdots V(t_{n+1}) 1 \otimes A(S_{t_1} Q_+ g_{1-\varepsilon(1)}) \otimes 1 + \right. \\
& \left. + [1 \otimes A(S_{t_1} Q_+ g_{1-\varepsilon(1)}) \otimes 1, V(t_2) \cdots V(t_{n+1})] \right) \\
& v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle.
\end{aligned}$$

By applying the annihilation operator  $A(S_{t_1} Q_+ g_{1-\varepsilon(1)})$  on the coherent vector

$$W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du\right) \Phi_F$$

the first term of (6.29) becomes

$$\begin{aligned}
(6.30) \quad & \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q_+ f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F, \\
& \int_0^{s/z^2} dt_1 \cdots \int_0^{t_n} dt_{n+1} \frac{1}{z} \langle S_{s/z^2} Q_+ g_{1-\varepsilon}, S_{t_1} Q_+ g_{\varepsilon(1)} \rangle \\
& (-i)^n V(t_2) \cdots V(t_{n+1}) z \int_{S'/z^2}^{T'/z^2} \langle S_{t_1} Q_+ g_{1-\varepsilon(1)}, S_u Q_+ f' \rangle du \\
& v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle.
\end{aligned}$$

With the change of variable (6.26) and using Lemma (6.3) of [2], (6.30) becomes

$$\begin{aligned}
& \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q_+ f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F, \\
& \int_{-s/z^2}^0 dt' \langle Q_+ g_{1-\varepsilon}, S_{t'} Q_+ g_{\varepsilon(1)} \rangle \int_0^{s/z^2} dt_2 \cdots \int_0^{t_n} dt_{n+1} V(t_2) \cdots V(t_{n+1}) (-i)^n \\
& \int_{S'/z^2}^{T'/z^2} \langle S_{t'+s/z^2} Q_+ g_{1-\varepsilon(1)}, S_u Q_+ f' \rangle du \\
& v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle.
\end{aligned}$$

Thus the conclusion of Section 4 and the fact that

$$\begin{aligned} & \int_{-s/z^2}^0 dt' \langle Q + g_{1-\varepsilon}, S_{t'} Q + g_{\varepsilon(1)} \rangle \int_{s'/z^2}^{T'/z^2} \langle S_{t'+3/z^2} Q + g_{1-\varepsilon(1)}, S_u Q + f' \rangle du \\ & \longrightarrow \int_{-\infty}^0 dt' \langle g_{1-\varepsilon}, S_{t'} g_{\varepsilon(1)} \rangle \chi_{[s', T']} (s) (g_{1-\varepsilon(1)} | f'), \text{ a.e.} \end{aligned}$$

shows that the limit of (6.30) exists.

Similar arguments show that by induction the limit of the second term of (6.30) exists.

Summing up we finish the proof.

LEMMA (6.3).

$$(6.33) \quad \begin{aligned} & \lim_{z \rightarrow 0} \sum_{\varepsilon \in \{0,1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F \rangle \\ & \quad \left[ 1 \otimes 1 \otimes A(Q^- S_{s/z^2} g_\varepsilon), U_{s/z^2} \right] \\ & v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle = 0. \end{aligned}$$

*Proof.* By the uniform estimate (Theorem (5.2)) it is enough to show that for each  $n \in \mathbf{N}$ ,

$$(6.34) \quad \begin{aligned} & \sum_{\varepsilon \in \{0,1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\ & \int_0^{s/z^2} dt_1 \cdots \int_0^{t_{n-1}} dt_n (-i)^n \left[ 1 \otimes 1 \otimes A(Q^- S_{s/z^2} g_\varepsilon), V(t_1) \cdots V(t_n) \right] \\ & v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle \longrightarrow 0, \end{aligned}$$

The left hand side of (6.34) is equal to

$$(6.35) \quad \begin{aligned} & \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\ & \int_0^{s/z^2} dt_1 \cdots \int_0^{t_{n-1}} dt_n (-i)^{n-1} \left( z \langle Q^- S_{s/z^2} g_\varepsilon, Q^- S_{t_1} g_{\varepsilon(1)} \rangle, \right. \\ & \quad \left. 1 \otimes A^+(Q^- S_{t_1} g_{1-\varepsilon(1)}) \otimes 1 V(t_2) \cdots V(t_n) + \right. \\ & \quad \left. + z^2 \langle Q^- S_{s/z^2} g_\varepsilon, Q^- S_{t_1} g_{1-\varepsilon(1)} \rangle, V(t_2) \cdots V(t_n) 1 \otimes A(Q^- S_{t_1} g_{\varepsilon(1)}) \otimes 1 + \right. \\ & \quad \left. + z^2 \langle Q^- S_{s/z^2} g_\varepsilon, Q^- S_{t_1} g_{1-\varepsilon(1)} \rangle, \left[ 1 \otimes 1 \otimes A(Q^- S_{t_1} g_{\varepsilon(1)}) V(t_2) \cdots V(t_n) \right] \right) \end{aligned}$$

$$v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle.$$

The first two terms of (6.35) are both equal to

$$(6.36) \quad z^2 \cdot O(1) \longrightarrow 0$$

and moreover the same arguments as those in the proof of Lemma (6.2) show that the third term of (6.35) is  $z^2 O(1)$ , therefore we end our proof.

We can obtain more from the proof of Lemma (6.2), in fact the proof shows how does get the limit (6.14). Now let us realize it.

By definition

$$(6.37) \quad I_z(b) = \sum_{n=1}^{\infty} \sum_{\epsilon \in \{0,1\}} \langle D_{\epsilon}^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q + f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F, \\ \int_0^{s/z^2} dt_1 \cdots \int_0^{t_{n-1}} dt_n \int_{S/z^2}^{T/z^2} \langle S_u Q + f, S_{s/z^2} Q + g_{\epsilon} \rangle du \\ \frac{1}{z} (-i)^n \left[ 1 \otimes A(S_{s/z^2} Q + g_{1-\epsilon}) \otimes 1, V(t_1) \cdots V(t_n) \right] \\ v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle.$$

By Lemma (6.2), the fact that

$$(6.38) \quad \int_{S/z^2}^{T/z^2} \langle S_u Q + f, S_{s/z^2} Q + g_{\epsilon} \rangle du \longrightarrow \chi_{[s,T]}(s) \cdot (f|g_{\epsilon}), \text{ a.e.}$$

and an argument similar to the one used in (6.24), ..., (6.30), we know that the limit of  $I_z(b)$  is equal to limit of

$$(6.39) \quad \sum_{n=0}^{\infty} \sum_{\epsilon, \epsilon(1) \in \{0,1\}} \langle D_{\epsilon(1)}^+ D_{\epsilon}^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q + f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F, \\ \chi_{[s,T]}(s) \cdot (f|g_{\epsilon}) \int_{-s/z^2}^0 dt' \langle Q + g_{1-\epsilon}, S_{t'} Q + g_{\epsilon(1)} \rangle \\ (-i)^n \int_0^{s/z^2} dt_2 \cdots \int_0^{t_n} dt_{n+1} V(t_2) \cdots V(t_{n-1}) \\ \times \int_{S'/z^2}^{T'/z^2} \langle S_{t'+s/z^2} Q + g_{1-\epsilon(1)}, S_u Q + f' \rangle du \\ v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle.$$

$$\begin{aligned}
& + \sum_{n=1}^{\infty} \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_{\varepsilon}^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q_+ f du \right) \Phi_F \otimes \\
& \quad W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\
& \chi_{[S,T]}(s) \cdot (f|g_{\varepsilon}) \int_0^{s/z^2} dt_2 \cdots \int_0^{t_n} dt_{n+1} \int_{-s/z^2}^0 dt' \langle Q_+ g_{1-\varepsilon}, S_{t'} Q_+ g_{\varepsilon(1)} \rangle \\
& (-i)^n \frac{1}{z} [1 \otimes A(S_{t'+s/z^2} Q_+ g_{1-\varepsilon(1)}) \otimes 1, V(t_2) \cdots V(t_{n+1})] \\
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F.
\end{aligned}$$

Using Lemma (6.3) of [2], we know that the limit of (6.39) is equal to the limit of

$$\begin{aligned}
& (6.40) \quad \sum_{n=0}^{\infty} \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_{\varepsilon}^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q_+ f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\
& \chi_{[S,T]}(s) \cdot (f|g_{\varepsilon}) \int_{-\infty}^0 dt' \langle g_{1-\varepsilon}, S_{t'} g_{\varepsilon(1)} \rangle \\
& (-i)^n \int_0^{s/z^2} dt_2 \cdots \int_0^{t_n} dt_{n+1} V(t_2) \cdots V(t_{n+1}) \chi_{[S',T']} (g_{1-\varepsilon(1)} | f') \\
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F + \\
& + \sum_{n=1}^{\infty} \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_{\varepsilon}^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q_+ f du \right) \Phi_F \otimes \\
& \quad W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\
& \chi_{[S,T]}(s) \cdot (f|g_{\varepsilon}) \int_{-\infty}^0 dt' \langle g_{1-\varepsilon}, S_{t'} g_{\varepsilon(1)} \rangle \\
& (-i)^n \frac{1}{z} \int_0^{s/z^2} dt_2 \cdots \int_0^{t_n} dt_{n+1} [1 \otimes A(S_{s/z^2} Q_+ g_{1-\varepsilon(1)}) \otimes 1, V(t_2) \cdots V(t_{n+1})] \\
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \\
& = \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_{\varepsilon}^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q_+ f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\
& \chi_{[S,T]}(s) \cdot (f|g_{\varepsilon}) \chi_{[S',T']} (g_{1-\varepsilon(1)} | f') (g_{1-\varepsilon} | g_{\varepsilon(1)}) - \\
& U_{S/z^2} v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F
\end{aligned}$$

$$\begin{aligned}
& + \sum_{\varepsilon \in \{0,1\}} \langle D_{1-\varepsilon}^+ D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F' , \\
& \frac{1}{z} \chi_{[S,T]}(s) \cdot (f | g_\varepsilon)(g_{1-\varepsilon} | g_{1-\varepsilon}) - [1 \otimes A(S_{S/z^2} Q + g_{1-\varepsilon(1)}) \otimes 1, U_{S/z^2}] \\
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi_F' \rangle .
\end{aligned}$$

As  $z \rightarrow 0$ , the first term of the right hand side of (6.40) goes to

(6.41)

$$\sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u, G(s) \rangle \chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \chi_{[S',T']} (s) (g_{1-\varepsilon(1)} | f') (g_{1-\varepsilon} | g_{\varepsilon(1)}) -$$

and the second term of the right hand side of (6.40) is of the same type as  $I_z(b)$ . The only difference is the new factor  $(g_{1-\varepsilon} | g_{\varepsilon(1)})_-$ . So by repeating the same arguments about  $I_z(b)$  on the second term of the right hand side of (6.40), we obtain the following result:

LEMMA (6.4).

$$\begin{aligned}
(6.42) \quad \lim_{z \rightarrow 0} I_z(b) = & \sum_{\varepsilon \in \{0,1\}} \sum_{n=0}^{\infty} \sum_{\sigma \in \{0,1\}^n} \langle D_\varepsilon^+ D_{\sigma(n)}^+ \cdots D_{\sigma(1)}^+ D_\varepsilon^+ u, G(s) \rangle \\
& (g_{1-\varepsilon} | g_{\sigma(1)})_- \cdot (g_{1-\sigma(1)} | g_{\sigma(2)})_- \cdots (g_{1-\sigma(n)} | g_{\varepsilon})_- \\
& \chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \chi_{[S',T']} (s) \cdot (g_{1-\varepsilon} | f') \\
& + \sum_{\varepsilon \in \{0,1\}} \sum_{n=0}^{\infty} \sum_{\sigma \in \{0,1\}^n} \langle D_{1-\varepsilon}^+ D_{\sigma(n)}^+ \cdots D_{\sigma(1)}^+ D_\varepsilon^+ u, G(s) \rangle \\
& (g_{1-\varepsilon} | g_{\sigma(1)})_- \cdot (g_{1-\sigma(1)} | g_{\sigma(2)})_- \cdots (g_{1-\sigma(n)} | g_{1-\varepsilon})_- \\
& \chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \chi_{[S',T']} (s) \cdot (g_\varepsilon | f') .
\end{aligned}$$

*Proof.* By the above arguments, one has

$$\begin{aligned}
(6.43) \quad \lim_{z \rightarrow 0} I_z(b) = & \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u, G(s) \rangle \\
& \chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \chi_{[S',T']} (g_{1-\varepsilon(1)} | f') (g_{1-\varepsilon} | g_{\varepsilon(1)})_- + \\
& + \lim_{z \rightarrow 0} \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes \\
& W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F' ,
\end{aligned}$$

$$\begin{aligned}
& \frac{1}{z} \chi_{[S,T]}(s) \cdot (f | g_\varepsilon)(g_{1-\varepsilon} | g_{\varepsilon(1)}) - [1 \otimes A(S_{s/z^2}Q + g_{1-\varepsilon(1)}) \otimes 1, U_{s/z^2}] \\
& v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle \\
& = \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u, G(s) \rangle \chi_{[S,T]}(s) \cdot (f | g_\varepsilon)(g_{1-\varepsilon} | g_{\varepsilon(1)}) - \chi_{[S',T']} (s) (g_{1-\varepsilon(1)} | f') + \\
& + \sum_{\varepsilon, \varepsilon(1), \varepsilon(2) \in \{0,1\}} \langle D_{\varepsilon(2)}^+ D_{\varepsilon(1)}^+ D_\varepsilon^+ u, G(s) \rangle (g_{1-\varepsilon} | g_{\varepsilon(1)}) - (g_{1-\varepsilon(1)} | g_{\varepsilon(2)}) - \\
& \quad \chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \chi_{[S',T']} (s) (g_{1-\varepsilon(2)} | f') + \\
& + \lim_{z \rightarrow 0} \sum_{\varepsilon, \varepsilon(1), \varepsilon(2) \in \{0,1\}} \\
& \quad \langle D_{\varepsilon(2)}^+ D_{\varepsilon(1)}^+ D_\varepsilon^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q + f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F, \\
& \quad \chi_{[S,T]}(s) \cdot (f | g_\varepsilon)(g_{1-\varepsilon} | g_{\varepsilon(1)}) - \cdot (g_{1-\varepsilon(1)} | g_{\varepsilon(2)}) - \\
& \quad \frac{1}{z} [1 \otimes A(S_{s/z^2}Q + g_{1-\varepsilon(2)}) \otimes 1, U_{s/z^2}] \\
& v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle.
\end{aligned}$$

Iterating, we obtain that

$$\begin{aligned}
(6.43) \quad & \lim_{z \rightarrow 0} I_z(b) = \sum_{\varepsilon, \varepsilon(1) \in \{0,1\}} \langle D_{\varepsilon(1)}^+ D_\varepsilon^+ u, G(s) \rangle \\
& \chi_{[S,T]}(s) \cdot (f | g_\varepsilon)(g_{1-\varepsilon} | g_{\varepsilon(1)}) - \chi_{[S',T']} (s) (g_{1-\varepsilon(1)} | f') + \\
& + \sum_{\varepsilon, \varepsilon(1), \varepsilon(2) \in \{0,1\}} \langle D_{\varepsilon(2)}^+ D_{\varepsilon(1)}^+ D_\varepsilon^+ u, G(s) \rangle (g_{1-\varepsilon} | g_{\varepsilon(1)}) - (g_{1-\varepsilon(1)} | g_{\varepsilon(2)}) - \\
& \quad \chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \chi_{[S',T']} (s) (g_{1-\varepsilon(2)} | f') + \\
& + \sum_{\varepsilon, \varepsilon(1), \varepsilon(2), \varepsilon(3) \in \{0,1\}} \langle D_{\varepsilon(3)}^+ D_{\varepsilon(2)}^+ D_{\varepsilon(1)}^+ D_\varepsilon^+ u, G(s) \rangle \\
& (g_{1-\varepsilon} | g_{\varepsilon(1)}) - \cdot (g_{1-\varepsilon(1)} | g_{\varepsilon(2)}) - \cdot (g_{1-\varepsilon(2)} | g_{\varepsilon(3)}) - \\
& \quad \chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \cdot \chi_{[S',T']} (s) (g_{1-\varepsilon(3)} | f') + \\
& + \dots + \\
& = \sum_{n=1}^{\infty} \sum_{\varepsilon, \varepsilon(1), \dots, \varepsilon(n) \in \{0,1\}} \langle D_{\varepsilon(n)}^+ \cdot \dots \cdot D_{\varepsilon(1)}^+ D_\varepsilon^+ u, G(s) \rangle \\
& (g_{1-\varepsilon} | g_{\varepsilon(1)}) - \cdot (g_{1-\varepsilon(1)} | g_{\varepsilon(2)}) - \cdot \dots \cdot (g_{1-\varepsilon(n-1)} | g_{\varepsilon(n)}) -
\end{aligned}$$

$$\chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \cdot \chi_{[S',T']}(\bar{s})(g_{1-\varepsilon(n)} | f')$$

where,  $\varepsilon(0) := \varepsilon$ .

We split the right hand side of (6.43) into two terms according to

$$(6.44a) \quad \varepsilon(n) = \varepsilon$$

or

$$(6.44b) \quad \varepsilon(n) = 1 - \varepsilon$$

then the right hand side of (6.43) is equal to

$$(6.45) \quad \sum_{n=1}^{\infty} \sum_{\varepsilon, \varepsilon(1), \dots, \varepsilon(n-1) \in \{0,1\}} \langle D_\varepsilon^+ D_{\varepsilon(n-1)}^+ \cdots D_{\varepsilon(1)}^+ D_\varepsilon^+ u, G(s) \rangle$$

$$(g_{1-\varepsilon} | g_{\varepsilon(1)})_- \cdot (g_{1-\varepsilon(1)} | g_{\varepsilon(2)})_- \cdots (g_{1-\varepsilon(n-1)} | g_\varepsilon)_-$$

$$\chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \chi_{[S',T']}(\bar{s}) \cdot (g_{1-\varepsilon} | f')$$

$$+ \sum_{n=1}^{\infty} \sum_{\varepsilon, \varepsilon(1), \dots, \varepsilon(n-1) \in \{0,1\}} \langle D_{1-\varepsilon}^+ D_{\varepsilon(n-1)}^+ \cdots D_{\varepsilon(1)}^+ D_\varepsilon^+ u, G(s) \rangle$$

$$(g_{1-\varepsilon} | g_{\varepsilon(1)})_- \cdot (g_{1-\varepsilon(1)} | g_{\varepsilon(2)})_- \cdots (g_{1-\varepsilon(n-1)} | g_{1-\varepsilon})_-$$

$$\chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \cdot \chi_{[S',T']}(\bar{s}) \cdot (g_{1-\varepsilon} | f')$$

$$= \sum_{\varepsilon \in \{1,0\}} \sum_{n=0}^{\infty} \sum_{\sigma \in \{0,1\}^n} \langle D_\varepsilon^+ D_{\sigma(n)}^+ \cdots D_{\sigma(1)}^+ D_\varepsilon^+ u, G(s) \rangle$$

$$(g_{1-\varepsilon} | g_{\varepsilon(1)})_- \cdot (g_{1-\sigma(1)} | g_{\sigma(2)})_- \cdots (g_{1-\sigma(n)} | g_\varepsilon)_-$$

$$\chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \cdot \chi_{[S',T']}(\bar{s}) \cdot (g_{1-\varepsilon} | f')$$

$$+ \sum_{\varepsilon \in \{1,0\}} \sum_{n=1}^{\infty} \sum_{\sigma \in \{0,1\}^n} \langle D_{1-\varepsilon}^+ D_{\sigma(n)}^+ \cdots D_{\sigma(1)}^+ D_\varepsilon^+ u, G(s) \rangle$$

$$(g_{1-\varepsilon} | g_{\sigma(1)})_- \cdot (g_{1-\sigma(1)} | g_{\sigma(2)})_- \cdots (g_{1-\sigma(n)} | g_{1-\varepsilon})_-$$

$$(\chi_{[S,T]}(s) \cdot (f | g_\varepsilon) \cdot \chi_{[S',T']}(\bar{s}) \cdot (g_\varepsilon | f'))$$

where,  $\sigma(0) := \varepsilon$ . This finish the proof of (6.42).

LEMMA (6.5).

$$(6.46) \quad \lim_{z \rightarrow 0} \frac{1}{z} \Pi_z = 0.$$

*Proof.*

$$(6.47)$$

$$\frac{1}{z} \Pi_z = \sum_{\varepsilon \in \{0,1\}} \frac{1}{z} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q_+ f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F^*,$$

$$\begin{aligned}
& 1 \otimes A^+(S_{s/z^2}Q + g_\varepsilon) \otimes A^+(Q^- S_{s/z^2}g_{1-\varepsilon}) U_{s/z^2} \\
& v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle \\
& = \langle D_\varepsilon^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q + f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du\right) \Phi'_F, \\
& \quad \sum_{\varepsilon \in \{0,1\}} z^2 \int_{S/z^2}^{T/z^2} \langle S_u Q + f, S_{s/z^2}Q + g_\varepsilon \rangle du \cdot \\
& \quad \int_{S/z^2}^{T/z^2} \langle Q^- S_u f, Q^- S_{s/z^2}g_{1-\varepsilon} \rangle_\ell du \cdot U_{s/z^2} \\
& v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle \\
& = z^2 \cdot O(1) \longrightarrow 0 \text{ a.e.}
\end{aligned}$$

LEMMA (6.6).

$$(6.48) \quad \lim_{z \rightarrow 0} IV_z = \sum_{\varepsilon \in \{0,1\}} \langle D_\varepsilon^+ u, G(s) \rangle \langle g_{1-\varepsilon}, e^{-\frac{1}{2}\beta H} g_\varepsilon \rangle.$$

*Proof.* It is enough to prove that the quantity  
(6.49)

$$\begin{aligned}
IV(z, s) := & \left| \langle D_\varepsilon^+ u \otimes W\left(z \int_{S/z^2}^{T/z^2} S_u Q + f du\right) \Phi_F \otimes W\left(z^2 \int_{S/z^2}^{T/z^2} S_u Q^- f du\right) \Phi'_F, \right. \\
& \quad \left. 1 \otimes 1 \otimes A^+(S_{s/z^2}Q^- g_{1-\varepsilon}) A(S_{s/z^2}Q^- g_\varepsilon) U_{s/z^2} \right. \\
& v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} S_u Q^- f' du\right) \Phi'_F \rangle \right|
\end{aligned}$$

tends to zero (a.e.) as  $z \rightarrow 0$ .

Since the integral

$$(6.50) \quad \int_0^t ds IV(z, s)$$

is a term of type II in the sense of Section 3 ( $k'' = 0$ ), one gets that

$$(6.51) \quad \lim_{z \rightarrow 0} \int_0^t ds IV(z, s) = 0.$$

By the uniform estimate, we obtain

$$(6.52) \quad 0 = \int_0^t ds \lim_{z \rightarrow 0} IV(z, s).$$

This result and the positivity of  $\text{IV}(z, s)$  concludes the proof.

Our next step is to investigate the limit

$$(6.53) \quad \lim_{z \rightarrow 0} \frac{1}{z} \text{III}_z.$$

By definition

$$(6.54) \quad \begin{aligned} \frac{1}{z} \text{III}_z = & \frac{1}{z} \sum_{\varepsilon \in \{0, 1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q_+ f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\ & 1 \otimes A(S_{s/z^2} Q_+ g_{1-\varepsilon}) \otimes A(Q^- S_{s/z^2} g_\varepsilon) \cdot U_{s/z^2} \\ & v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle \end{aligned}$$

where, one can write the product

$$1 \otimes A(S_{s/z^2} Q_+ g_{1-\varepsilon}) \otimes A(Q^- S_{s/z^2} g_\varepsilon) \cdot U_{s/z^2}$$

to a sum of four terms:

$$(6.55) \quad \begin{aligned} & U_{s/z^2} 1 \otimes A(S_{s/z^2} Q_+ g_{1-\varepsilon}) \otimes A(Q^- S_{s/z^2} g_\varepsilon) + \\ & + [1 \otimes A(S_{s/z^2} Q_+ g_{1-\varepsilon}) \otimes 1, U_{s/z^2}] 1 \otimes 1 \otimes A(Q^- S_{s/z^2} g_\varepsilon) + \\ & + [1 \otimes 1 \otimes A(Q^- S_{s/z^2} g_\varepsilon), U_{s/z^2}] 1 \otimes A(S_{s/z^2} Q_+ g_{1-\varepsilon}) \otimes 1 + \\ & + [1 \otimes A(S_{s/z^2} Q_+ g_{1-\varepsilon}) \otimes A(Q^- S_{s/z^2} g_\varepsilon) \cdot U_{s/z^2}]. \end{aligned}$$

Respectively,  $\frac{1}{z} \text{III}_z$  can be written as a sum of four terms, namely

$$(6.56) \quad \text{III}_z(a) + \text{III}_z(b) + \text{III}_z(c) + \text{III}_z(d)$$

where,

$$(6.57a) \quad \begin{aligned} \text{III}_z(a) := & \frac{1}{z} \sum_{\varepsilon \in \{0, 1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q_+ f du \right) \Phi_F \otimes \\ & W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \end{aligned}$$

$$\begin{aligned} & U_{s/z^2} 1 \otimes A(S_{s/z^2} Q_+ g_{1-\varepsilon}) \otimes A(Q^- S_{s/z^2} g_\varepsilon) \\ & v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q_+ f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle \end{aligned}$$

(6.57b)

$$\text{III}_z(\text{b}) := \frac{1}{z} \sum_{\varepsilon \in \{0,1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\ [1 \otimes A(S_{S/z^2} Q + g_{1-\varepsilon}) \otimes 1, U_{S/z^2}] 1 \otimes 1 \otimes A(Q^- S_{S/z^2} g_\varepsilon) \\ v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle$$

(6.57c)

$$\text{III}_z(\text{c}) := \frac{1}{z} \sum_{\varepsilon \in \{0,1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\ [1 \otimes 1 \otimes A(Q^- S_{S/z^2} g_{1-\varepsilon}), U_{S/z^2}] 1 \otimes A(S_{S/z^2} Q + g_{1-\varepsilon}) \otimes 1 \\ v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle$$

and

$$(6.57d) \quad \text{III}_z(\text{d}) := \frac{1}{z} \sum_{\varepsilon \in \{0,1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes \\ W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\ [1 \otimes A(S_{S/z^2} Q + g_{1-\varepsilon}) \otimes A(Q^- S_{S/z^2} g_\varepsilon) \cdot U_{S/z^2}] \\ v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle.$$

For the four terms we have that

LEMMA (6.7).

$$(6.58) \quad \text{III}_z(a) = z^2 \cdot O(1) \longrightarrow 0.$$

*Proof.* In the right hand side of (6.57a), applying the two annihilation operators on the coherent vectors and we obtain that

(6.59)

$$\text{III}_z(\text{a}) = \frac{1}{z} \sum_{\varepsilon \in \{0,1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\ U_{S/z^2} z \int_{S'/z^2}^{T'/z^2} \langle S_{S/z^2} Q + g_{1-\varepsilon}, S_u Q + f' \rangle du \cdot \\ z^2 \int_{S'/z^2}^{T'/z^2} \langle Q^- S_{S/z^2} g_\varepsilon, Q^- S_u f' \rangle, du$$

$$\begin{aligned}
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle \\
& = z^2 \cdot \sum_{\varepsilon \in \{0,1\}} \int_{S'/z^2}^{T'/z^2} \langle S_{s/z^2} Q + g_{1-\varepsilon}, S_u Q + f' \rangle du \cdot \\
& \quad \cdot \int_{S'/z^2}^{T'/z^2} \langle Q^- S_{s/z^2} g_\varepsilon, Q^- S_u f' \rangle_\epsilon du \\
& \quad \langle D_\varepsilon^+ u, G_z(s) \rangle.
\end{aligned}$$

This gives (6.58).

LEMMA (6.8).

$$(6.60) \quad \text{III}_z(\mathbf{b}) = z^2 \cdot O(1) \longrightarrow 0.$$

*Proof.* In the right hand side of (6.57b), apply the annihilation operator  $A(Q^- S_{s/z^2} g_\varepsilon)$  on the coherent vector

$$W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F$$

one finds that

$$\begin{aligned}
(6.61) \quad \text{III}_z(\mathbf{b}) &= \sum_{\varepsilon \in \{0,1\}} z^2 \int_{S/z^2}^{T/z^2} \langle Q^- S_{s/z^2} g_\varepsilon, Q^- S_u f' \rangle_\epsilon du \\
&\quad \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f' du \right) \Phi'_F \rangle \\
&\quad \frac{1}{z} [1 \otimes A(S_{s/z^2} Q + g_{1-\varepsilon}) \otimes 1, U_{s/z^2}] \\
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle.
\end{aligned}$$

This formula and Lemma (6.2) imply (6.60).

LEMMA (6.9).

$$(6.62) \quad \text{III}_z(\mathbf{c}) \longrightarrow 0.$$

*Proof.* This Lemma is a direct result of Lemma (6.3). Our next goal is to obtain the limit of  $\text{III}_z(\mathbf{d})$

LEMMA (6.10). *For  $g_0, g_1, t$  satisfying the condition  $(*)$ , the limit*

$$(6.63) \quad \lim_{z \rightarrow 0} \int_0^t \text{III}_z(\mathbf{d}) ds$$

exists and is equal to

$$(6.64) \quad \sum_{\varepsilon \in \{0,1\}} \int_0^t dt_0 \langle u, D_3(\varepsilon) G(t_0) \rangle$$

where,

$$(6.65) \quad D_3(\varepsilon) := \sum_{k=1}^{\infty} \sum_{\sigma \in \{0,1\}^k} D_\varepsilon D_{\sigma(1)} \cdots D_{\sigma(k)} \int_{-\infty}^0 ds_1 \cdots \int_{-\infty}^0 ds_k \langle g_{1-\varepsilon}, S_{s_1} g_{\sigma(1)} \rangle \\ \langle g_{1-\sigma(1)}, S_{s_2} g_{\sigma(2)} \rangle \cdots \langle g_{1-\sigma(k-1)}, S_{s_k} g_{1-\sigma(k)} \rangle \cdot \overline{\langle g_\varepsilon, S_{s_{k+1}} \cdots S_{s_k} g_{\sigma(k)} \rangle}.$$

*Proof.* With change of variable

$$(6.66) \quad s/z^2 = t_0$$

one gets

$$(6.67) \quad \int_0^t \text{III}_z(d) ds = \frac{1}{z} \sum_{\varepsilon \in \{0,1\}} \\ \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi'_F, \\ \int_0^t ds \left[ 1 \otimes A(S_{s/z^2} Q + g_{1-\varepsilon}) \otimes A(Q^- S_{s/z^2} g_\varepsilon), U_{s/z^2} \right] \\ v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle \\ = \sum_{\varepsilon \in \{0,1\}} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/Z^2}^{T/Z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/Z^2}^{T/Z^2} Q^- S_u f du \right) \Phi'_F, \\ \int_0^{t/z^2} dt_0 z \left[ 1 \otimes A(S_{t_0} Q + g_{1-\varepsilon}) \otimes A(Q^- S_{t_0} g_\varepsilon), U_{t_0} \right] \\ v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle \\ = \sum_{\varepsilon \in \{0,1\}} \sum_{n=0}^{\infty} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/Z^2}^{T/Z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/Z^2}^{T/Z^2} Q^- S_u f du \right) \Phi'_F, \\ (-i)^n z \int_0^{t/z^2} dt_0 \int_0^{t_0} dt_1 \cdots \int_0^{t_{n-1}} dt_n \\ \times \left[ 1 \otimes A(S_{t_0} Q + g_{1-\varepsilon}) \otimes A(Q^- S_{t_0} g_\varepsilon), V(t_1) \cdots V(t_n) \right] \\ v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi'_F \rangle.$$

Thus by the uniform estimate, we can exchange the order of the limit of  $z \rightarrow 0$  and the sum over  $n \in \mathbf{N}$ .

Notice that for any operators  $A, B, X$ ,

$$(6.68) \quad AB = BA \implies [AB, X] = [A, [B, X]]$$

therefore

$$\begin{aligned}
(6.69) \quad & \left[ 1 \otimes A(S_{t_0}Q + g_{1-\varepsilon}) \otimes A[Q^- S_{t_0}g_\varepsilon], V(t_1) \cdots V(t_n) \right] \\
&= \left[ 1 \otimes A(S_{t_0}Q + g_{1-\varepsilon}) \otimes 1, [1 \otimes 1 \otimes A[Q^- S_{t_0}g_\varepsilon], V(t_1) \cdots V(t_n)] \right] \\
&\quad = \sum_{k=1}^n \left[ 1 \otimes A(S_{t_0}Q + g_{1-\varepsilon}) \otimes 1, V(t_1) \cdots V(t_{k-1}) \right. \\
&\quad \left. [1 \otimes 1 \otimes A(Q^- S_{t_0}g_\varepsilon), V(t_k)] V(t_{k+1}) \cdots V(t_n) \right] \\
&= \sum_{k=1}^n \sum_{\varepsilon(k) \in \{0,1\}} \left[ 1 \otimes A(S_{t_0}Q + g_{1-\varepsilon}) \otimes 1, V(t_1) \cdots V(t_{k-1}) \right. \\
&\quad \left. [1 \otimes 1 \otimes A(Q^- S_{t_0}g_\varepsilon), i \left( z A^+(S_{t_k}Q + g_{1-\varepsilon(k)}) \otimes A^+(Q^- S_{t_k}g_{\varepsilon(k)}) \right. \right. \\
&\quad \left. \left. + z^2 1 \otimes 1 \otimes A^+(Q^- S_{t_k}g_{1-\varepsilon(k)}) A(Q^- S_{t_k}g_{\varepsilon(k)}) \right)] V(t_{k+1}) \cdots V(t_n) \right].
\end{aligned}$$

Respectively, the right hand side of (6.67) becomes

$$\begin{aligned}
(6.70) \quad & \sum_{\varepsilon \in \{0,1\}} \sum_{n=0}^{\infty} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z_2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F^\varepsilon, \\
& (-i)^{n-1} z \int_0^{t/z^2} dt_0 \int_0^{t_0} dt_1 \cdots \int_0^{t_{n-1}} dt_n \sum_{k=1}^n \sum_{\varepsilon(k) \in \{0,1\}} \langle Q^- S_{t_0}g_\varepsilon, Q^- S_{t_k}g_{\varepsilon(k)} \rangle, \\
& \left[ 1 \otimes A(S_{t_0}Q + g_{1-\varepsilon}) \otimes 1, V(t_1) \cdots V(t_{k-1}) z \cdot 1 \otimes A^+(S_{t_k}Q + g_{1-\varepsilon(k)}) \otimes 1 \right] \\
& V(t_{k-1}) \cdots V(t_n) v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z}^{T'/z^2} Q^- S_u f' du \right) \Phi_F^\varepsilon, \\
& + \sum_{\varepsilon \in \{0,1\}} \sum_{n=0}^{\infty} \langle D_\varepsilon^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z_2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F^\varepsilon, \\
& (-i)^{n-1} z \int_0^{t/z^2} dt_0 \int_0^{t_0} dt_1 \cdots \int_0^{t_{n-1}} dt_n \\
& \sum_{k=1}^n \sum_{\varepsilon(k) \in \{0,1\}} \langle Q^- S_{t_0}g_\varepsilon, Q^- S_{t_k}g_{\varepsilon(k)} \rangle, V(t_1) \cdots V(t_{k-1}) z \cdot 1 \otimes \\
& \otimes A^+(S_{t_k}Q + g_{1-\varepsilon(k)}) \otimes 1 \\
& \left[ 1 \otimes A(S_{t_0}Q + g_{1-\varepsilon}) \otimes 1, V(t_{k-1}) \cdots V(t_n) \right] \\
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z}^{T'/z^2} Q^- S_u f' du \right) \Phi_F^\varepsilon
\end{aligned}$$

$$\begin{aligned}
& + \sum_{\varepsilon \in \{0,1\}} \sum_{n=0}^{\infty} \langle D_{\varepsilon}^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q - S_u f du \right) \Phi'_F, \\
& (-i)^{n-1} z \int_0^{t/z^2} dt_0 \int_0^{t_0} dt_1 \cdots \int_0^{t_{n-1}} dt_n \sum_{k=1}^n \sum_{\varepsilon(k) \in \{0,1\}} \left[ 1 \otimes A(S_{t_0} Q + g_{1-\varepsilon}) \otimes 1, \right. \\
& \quad V(t_1) \cdots V(t_{k-1}) \\
& [1 \otimes 1 \otimes A(Q - S_{t_0} g_{\varepsilon}), z^2 1 \otimes 1 \otimes A^+(Q - S_{t_k} g_{1-\varepsilon(k)}) A(Q - S_{t_k} g_{\varepsilon(k)})] \\
& \quad \times V(t_{k+1}) \cdots V(t_n) \Big] \\
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q - S_u f' du \right) \Phi'_F \rangle.
\end{aligned}$$

Moreover, the third term of (6.70) is a type II term in the sense explained in Section 3 ( $k'' > 0$ ), so it goes to zero as  $z \rightarrow 0$ . The second term of (6.70) corresponds to the situation in which there exists some  $p_h$  or  $p'_h$  (here, it is 0) such that  $q_h > p_h + 1$  or  $q'_h > p'_h + 1$ .

Therefore this term tends to zero as  $z \rightarrow 0$ .

Now let us consider the first term of (6.70). In the language of Theorem (4.8),  $t_0$  is some  $t_i$  and  $t_k$  is some  $t_i$ , therefore we know that one needs only to consider the situation

$$i_1 < i'_1 < i_2 < i'_2 < \cdots < i_k < i'_k$$

and the limit of the first term as  $z \rightarrow 0$  is equal to

$$\begin{aligned}
& (6.71) \quad \sum_{n=1}^{\infty} \sum_{\varepsilon \in \{0,1\}} \lim_{z \rightarrow 0} \langle D_{\varepsilon}^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q - S_u f du \right) \Phi'_F, \\
& (-i)^{n-1} z \int_0^{t/z^2} dt_0 \int_0^{t_0} dt_1 \cdots \int_0^{t_{n-1}} dt_n \sum_{k=1}^n \sum_{\sigma(k) \in \{0,1\}^k} \langle Q - S_{t_0} g_{\varepsilon}, Q - S_{t_k} g_{\sigma(k)} \rangle, \\
& z D_{\sigma(1)} \cdots D_{\sigma(k)} \otimes \left[ A(S_{t_0} Q + g_{1-\varepsilon}), A^+(S_{t_1} Q + g_{\sigma(1)}) A(S_{t_1} Q + g_{1-\sigma(1)}) \cdots \right. \\
& \quad \left. A^+(S_{t_{k-1}} Q + g_{\sigma(k-1)}) A(S_{t_{k-1}} Q + g_{1-\sigma(k-1)}) A^+(S_{t_k} Q + g_{1-\sigma(k)}) \right] \otimes 1 V(t_{k-1}) \cdots V(t_n) \\
& v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q - S_u f' du \right) \Phi'_F \rangle.
\end{aligned}$$

By Theorem (4.8), we know that one needs only to consider the case in which the operator

$$(6.72) \quad \left[ A(S_{t_0} Q + g_{1-\varepsilon}), A^+(S_{t_1} Q + g_{\sigma(1)}) A(S_{t_1} Q + g_{1-\sigma(1)}) \cdots \right]$$

$$A^+(S_{t_{k-1}}Q + g_{\sigma(k-1)}) A(S_{t_{k-1}}Q + g_{1-\sigma(k-1)}) A^+(S_{t_k}Q - g_{1-\sigma(k)}) \Big]$$

is replaced by its pure scalar product term

$$(6.73) \quad \langle S_{t_0}Q + g_{1-\varepsilon}, S_{t_1}Q + g_{\sigma(1)} \rangle \cdot \langle S_{t_1}Q + g_{1-\sigma(1)}, S_{t_2}Q + g_{\sigma(2)} \rangle \cdots \\ \cdots \langle S_{t_{k-1}}Q + g_{1-\sigma(k-1)}, S_{t_k}Q + g_{1-\sigma(k)} \rangle$$

therefore one has

$$(6.74) \quad \lim_{z \rightarrow 0} \int_0^t \text{III}_z(d) ds \\ = \sum_{n=0}^{\infty} \sum_{\varepsilon \in \{0,1\}} \lim_{z \rightarrow 0} \langle D_{\varepsilon}^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F^*, \\ (-i)^{n-1} z^2 \int_0^{t/z^2} dt_0 \int_0^{t_0} dt_1 \cdots \int_0^{t_{n-1}} dt_n \sum_{k=1}^n \sum_{\varepsilon(k) \in \{0,1\}^k} \langle Q^- S_{t_0} g_{\varepsilon}, Q^- S_{t_k} g_{\sigma(k)} \rangle, \\ D_{\sigma(1)} \cdots D_{\sigma(k)} \otimes 1 \langle S_{t_0}Q + g_{1-\varepsilon}, S_{t_1}Q + g_{\sigma(1)} \rangle \cdot \\ \cdot \langle S_{t_1}Q + g_{1-\sigma(1)}, S_{t_2}Q + g_{\sigma(2)} \rangle \cdots \\ \cdots \langle S_{t_{k-1}}Q + g_{1-\sigma(k-1)}, S_{t_k}Q + g_{1-\sigma(k)} \rangle \\ V(t_{k+1}) \cdots V(t_n) v \otimes W \left( z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du \right) \Phi_F \otimes W \left( z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du \right) \Phi_F^*.$$

In the right hand side of (6.74), changing the order of sum for  $n=1, 2, \dots$  and  $k=1, \dots, n$  and with the change of variables

$$(6.75) \quad z^2 t_h \hookrightarrow t_h, h = 0, 1, \dots, k$$

we obtain that

$$(6.76) \quad \lim_{z \rightarrow 0} \int_0^t \text{III}_z(d) ds = \sum_{k=1}^{\infty} \sum_{\varepsilon \in \{0,1\}} \sum_{\sigma \in \{0,1\}^k} \lim_{z \rightarrow 0} \\ \langle D_{\sigma(k)}^+ \cdots D_{\sigma(1)}^+ D_{\varepsilon}^+ u \otimes W \left( z \int_{S/z^2}^{T/z^2} S_u Q + f du \right) \Phi_F \otimes W \left( z^2 \int_{S/z^2}^{T/z^2} Q^- S_u f du \right) \Phi_F^*, \\ z^{-2k} \int_0^t dt_0 \int_0^{t_0} dt_1 \cdots \int_0^{t_{k-1}} dt_k \langle S_{t_0/z^2} Q + g_{1-\varepsilon}, S_{t_1/z^2} Q + g_{\sigma(1)} \rangle \\ \langle S_{t_1/z^2} Q + g_{1-\sigma(1)}, S_{t_2/z^2} Q + g_{\sigma(2)} \rangle \cdots \langle S_{t_{k-1}/z^2} Q + g_{1-\sigma(k-1)}, S_{t_k/z^2} Q + g_{1-\sigma(k)} \rangle \\ \langle Q^- S_{t_0} g_{\varepsilon}, Q^- S_{t_k} g_{\sigma(k)} \rangle, \\ \sum_{n=k}^{\infty} (-i)^{n-k} \int_0^{t_k/z^2} dt_{k+1} \cdots \int_0^{t_{n-1}} dt_n V(t_{k+1}) \cdots V(t_n)$$

$$v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F.$$

In the right hand side of (6.76), with the change of variables

$$(6.77) \quad s_h := (t_h - t_{h-1})/z^2, \quad h = 1, \dots, k$$

and applying Lemma (6.3) of [2], we find that

$$\begin{aligned} \lim_{z \rightarrow 0} \int_0^t \text{III}_z(d) ds &= \sum_{k=1}^{\infty} \sum_{\varepsilon \in \{0,1\}} \sum_{\sigma \in \{0,1\}^k} \int_0^t dt_0 \\ &\quad \int_{-\infty}^0 ds_1 \cdots \int_{-\infty}^0 ds_k \langle g_{1-\varepsilon}, S_{s_1} Q + g_{\sigma(1)} \rangle \\ &\quad \langle g_{1-\sigma(1)}, S_{s_2} Q + g_{\sigma(2)} \rangle \cdots \langle g_{1-\sigma(k-1)}, S_{s_k} Q + g_{1-\sigma(k)} \rangle \cdot \overline{\langle g_{\varepsilon}, S_{s_k+\dots+s_1} g_{\sigma(k)} \rangle} \\ \lim_{z \rightarrow 0} \langle D_{\sigma(k)}^+ \cdots D_{\sigma(1)}^+ D_{\varepsilon}^+ u \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F, \\ U_{t_0/z^2} v \otimes W\left(z \int_{S'/z^2}^{T'/z^2} S_u Q + f' du\right) \Phi_F \otimes W\left(z^2 \int_{S'/z^2}^{T'/z^2} Q^- S_u f' du\right) \Phi'_F \rangle \\ &= \sum_{\varepsilon \in \{0,1\}} \sum_{k=1}^{\infty} \sum_{\sigma \in \{0,1\}^k} \int_0^t dt_0 \langle D_{\sigma(k)}^+ \cdots D_{\sigma(1)}^+ D_{\varepsilon}^+ u, G(t_0) \rangle \\ &\quad \int_{-\infty}^0 ds_1 \cdots \int_{-\infty}^0 ds_k \langle g_{1-\varepsilon}, S_{s_1} g_{\sigma(1)} \rangle \\ &\quad \langle g_{1-\sigma(1)}, S_{s_2} Q + g_{\sigma(2)} \rangle \cdots \langle g_{1-\sigma(k-1)}, S_{s_k} Q + g_{1-\sigma(k)} \rangle \cdot \overline{\langle g_{\varepsilon}, S_{s_k+\dots+s_1} g_{\sigma(k)} \rangle} \end{aligned}$$

this ends the proof of (6.64).

Finally, combining together (6.7), (6.9), (6.11), (6.12), (6.13), Lemma (6.2)–Lemma (6.10), we get the following

THEOREM (6.11). For any  $t$ ,  $g_0$ ,  $g_1$  satisfied the condition (1.15),

$$\begin{aligned} (6.79) \quad \langle u, G(t) \rangle &= \langle u, G(0) \rangle + \sum_{\varepsilon \in \{0,1\}} \int_0^t ds \\ &\quad \left( \chi_{[S,T]}(s) \cdot \chi_{[S',T']} (s) \cdot (g_{\varepsilon} | f') \cdot (f | g_{\varepsilon}) \langle D_1^+(\varepsilon) u, G(s) \rangle + \right. \\ &\quad + \chi_{[S,T]}(s) \cdot \chi_{[S',T']} (s) \cdot (f | g_{\varepsilon}) \cdot (g_{1-\varepsilon} | f') \cdot \langle D_2^+(\varepsilon) u, G(s) \rangle + \\ &\quad \left. + \langle (D_3(\varepsilon) + D_{\varepsilon} \langle g_{\varepsilon}, e^{-\frac{1}{2}\beta H} g_{1-\varepsilon} \rangle)^+ u, G(s) \rangle \right) \end{aligned}$$

where,  $D_3(\varepsilon)$  defined by (6.65),

$$(6.80) \quad D_1(\varepsilon) := D_{\varepsilon} +$$

$$+ \sum_{n=0}^{\infty} \sum_{\sigma \in \{0,1\}^n} D_{\varepsilon} D_{\sigma(1)} \cdots D_{\sigma(n)} D_{1-\varepsilon}$$

$$(g_{1-\varepsilon} | g_{\sigma(1)})_- \cdot (g_{1-\sigma(1)} | g_{\sigma(2)})_- \cdot \cdots \cdot (g_{1-\sigma(n)} | g_{1-\varepsilon})_-$$

and

$$(6.81) \quad D_2(\varepsilon) := \sum_{n=0}^{\infty} \sum_{\sigma \in \{0,1\}^n} D_\varepsilon D_{\sigma(1)} \cdot \cdots \cdot D_{\sigma(n)} D_\varepsilon$$

$$(g_{1-\varepsilon} | g_{\sigma(1)})_- \cdot (g_{1-\sigma(1)} | g_{\sigma(2)})_- \cdot \cdots \cdot (g_{1-\sigma(n)} | g_\varepsilon)_-$$

where,  $\sigma(0) := \varepsilon$ .

### § 7. The quantum stochastic differential equation

In the section, we consider the quantum stochastic differential equation (q.s.d.e.)

$$(7.1) \quad U(t) = 1 + \sum_{\varepsilon \in \{0,1\}} \int_0^t \left[ D_1(\varepsilon) \otimes dN_s(g_\varepsilon, g_{1-\varepsilon}) + \right.$$

$$\left. + D_2(\varepsilon) \otimes dN_s(g_\varepsilon, g_\varepsilon) + (D_3(\varepsilon) + D_\varepsilon \langle g_{1-\varepsilon}, e^{-\frac{1}{2}\beta H} g_\varepsilon \rangle) \otimes 1 ds \right] U(s)$$

on  $H_0 \otimes \Gamma(L^2(\mathbf{R}) \otimes (\mathbf{K}, (\cdot | \cdot)))$ , where,  $N$  is the gauge process and

$$(7.2) \quad N_s(g, g') := N_s(\chi_{[0,s]} \otimes |g\rangle \langle g'|).$$

$D_1(\varepsilon)$ ,  $D_2(\varepsilon)$  and  $D_3(\varepsilon)$  are defined in § 6. By [11], we know that the q.s.d.e. (7.1) has a unique solution  $U(t)$  which can be obtained by iterative.

*Proof of Theorem (1.1).* Theorem (6.1) has shown the low density limit (1.13) exists. Now, we shall prove that it is equal to (1.14). Clearly, (1.14) is continuous for  $u, v \in H_0$ , so one can write it to

$$\langle u, F(t) \rangle$$

where,  $F(t) \in H_0$ . Hence one has

$$(7.3) \quad \langle u, F(0) \rangle = \langle u \otimes W(X_{[s,t]} \otimes f) \Psi, v \otimes W(\chi_{[s',t']} \otimes f') \Psi \rangle$$

$$= \langle u, G(0) \rangle.$$

Moreover, by (1.16)

$$(7.4) \quad \langle u, F(t) \rangle = \langle u, F(0) \rangle + \sum_{\varepsilon \in \{0,1\}} \int_0^t \langle u \otimes W(\chi_{[s,t]} \otimes f') \Psi,$$

$$\left( D_1(\varepsilon) \otimes dN_s(g_\varepsilon, g_{1-\varepsilon}) + \right.$$

$$\left. + D_2(\varepsilon) \otimes dN_s(g_\varepsilon, g_\varepsilon) + (D_3(\varepsilon) + \langle g_{1-\varepsilon}, e^{-\frac{1}{2}\beta H} g_\varepsilon \rangle) \otimes 1 ds \right)$$

$$\times U(s)v \otimes W(\chi_{[s',t']} \otimes f') \Psi \rangle.$$

Apply the theorem (4.2) of [11] to (7.4), one obtains

$$(7.5) \quad \begin{aligned} \langle u, F(t) \rangle &= \langle u, F(0) \rangle + \sum_{\varepsilon \in \{0,1\}} \int_0^t ds \\ &\quad \left( \chi_{[s,t]}(s) \cdot \chi_{[s',t']} (s) \cdot (g_\varepsilon | f') \cdot (f | g_\varepsilon) \langle D_1^+(\varepsilon) u, F(s) \rangle + \right. \\ &\quad + \chi_{[s,t]}(s) \cdot \chi_{[s',t']} (s) \cdot (f | g_\varepsilon)_- \cdot (g_{1-\varepsilon} | f') \cdot \langle D_2^+(\varepsilon) u, F(s) \rangle + \\ &\quad \left. + \langle (D_3(\varepsilon) + D_\varepsilon \langle g_{1-\varepsilon}, e^{-\frac{1}{2}\beta H} g_\varepsilon \rangle)^+ u, F(s) \rangle \right). \end{aligned}$$

Since (7.5) has unique solution, so (7.8) has a unique solution. Therefore,

$$\langle u, F(t) \rangle = \langle u, G(t) \rangle \quad t \geq 0.$$
