**Group Representations in Probability and Statistics***by Persi Diaconis*

This monograph is an expanded version of lecture notes delivered over the past eight years at Harvard, Stanford, and Ohio State Universities delving into the uses of group theory, particularly non-commutative Fourier analysis, in probability and statistics. It presents useful tools for applied problems and develops familiarity with one of the most active areas in modern mathematics. This volume will be available in December 1988.

**Contents**

## Introduction

## Basics of Representations and Characters

Definitions and examples; The basic theorems; Decomposition of the regular representation and Fourier inversion; Number of irreducible representations; Products of groups

## Random Walks on Groups

Examples; The basic setup; Some explicit computations; Random transpositions; The Markov chain connection; Random walks on homogeneous spaces and Gelfand pairs; Some references; First hitting times

## Probabilistic Arguments

Introduction—strong uniform times; Examples of strong uniform times; A closer look at strong uniform times; An analysis of real riffle shuffles; Coupling; First hits and first time to cover all; Some open problems on random walk and strong uniform times

## Examples of Data on Permutations and Homogeneous Spaces

Permutation data; Partially ranked data; The  $d$ -sphere  $S^d$ ; Other groups; Statistics on groups

## Metrics on Groups, and Their Statistical Uses

Applications of metrics; Some metrics on permutations; General constructions of metrics; Metrics on homogeneous spaces; Some philosophy

## Representation Theory of the Symmetric Group

Construction of the irreducible representations of the symmetric group; More on representations of  $S_n$

## Spectral Analysis

Data on groups; Data on homogeneous spaces; Analysis of variance; Thoughts about spectral analysis

## Models

Exponential families from representations; Data on spheres; Models for permutations and partially ranked data; Other models for ranked data; Theory and practical details

## References
