THE ANNALS *of* STATISTICS

An Official Journal of
The Institute of Mathematical Statistics

PAGE

Special Invited Paper

Edgeworth expansions in nonparametric statistics ..... P. J. Bickel 1

Articles

Improving on equivariant estimators ..... J. F. Brewster and J. V. Zidek 21
Probability inequalities for the sum in sampling without replacement ..... R. J. Serfling 39
The invariance principle for one-sample rank-order statistics ..... Pranab Kumar Sen 49
Asymptotically efficient adaptive rank estimates in location models ..... Rudolf Beran 63
Asymptotic sufficiency of the vector of ranks in the Bahadur sense ..... Jaroslav Hájek 75
Multivariate distributions with exponential minimums ..... James D. Esary and Albert W. Marshall 84
Estimation of models of autoregressive signal plus white noise ..... Marcello Pagano 99
Asymptotic expansions of the non-null distributions of likelihood ratio criteria for covariance matrices ..... C. G. Khatri and M. C. Srivastava 109
Rate of convergence in the sequence-compound squared-distance loss estimation problem for a family of m-variate normal distributions ..... V. Susarla 118
Control charts based on weighted sums ..... Tze Leung Lai 134
Resistant and susceptible BIB designs ..... A. Hedayat and P. W. M. John 148
On maximal rewards and ϵ-optimal policies in continuous time Markov decision chains ..... Mark R. Lembersky 159

Short Communications

Note on Anderson's sequential procedures with triangular boundary ..... Václav Fabian 170
Robustness of the Wilcoxon test to a certain dependency between samples ..... Myles Hollander, Gordon Pledger and Pi-Erh Lin 177
The intersection of random spheres and the noncentral radial error distribution for spherical models ..... Andre G. Laurent 182
Minimax estimation of powers of the variance of a normal population under squared error loss ..... William E. Strawderman 190
On symmetric compound decision rules for dichotomies ..... J. B. Copas 199
Hyperadmissibility in survey sampling ..... Jan Lanke and M. K. Ramakrishnan 205
A convergence theorem in the theory of D-optimum experimental designs ..... A. Pázman 216
On stationary policies—The general case ..... Michael Orkin 219

Note

Correction to "Minimax texts and the Neyman-Pearson lemma for capacities" ..... Peter J. Huber and Volker Strassen 223

Vol. 2, No. 1—January 1974

Institute of Mathematical Statistics is collaborating with JSTOR to digitize, preserve, and extend access to *The Annals of Statistics.* www.jstor.org

THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.

OFFICERS

President:
Lucien LeCam, Department of Statistics, University of California, Berkeley, California 94720

President-Elect:
R. R. Bahadur, Indian Statistical Institute, 538 Vojana Bhavan, Parliament Street, New Delhi-1, India

Executive Secretary:
Leo Katz, Statistical Laboratory, Michigan State University, East Lansing, Michigan 48823

Program Secretary:
R. V. Hogg, Department of Statistics, University of Iowa, Iowa City, Iowa 52240

Treasurer:
Robert Elashoff, MR IV—Room 131, University of California, San Francisco, California 94122

Editor: *Annals of Statistics*
I. Richard Savage, Department of Statistics, The Florida State University, Tallahassee, Florida 32306

Editor: *Annals of Probability*
Ronald Pyke, Department of Mathematics, University of Washington, Seattle, Washington 98195

Managing Editor:
K. J. C. Smith, Department of Statistics, University of North Carolina, Chapel Hill, North Carolina 27514

Membership. Membership dues including a subscription to one *Annals* and *The Institute of Mathematical Statistics Bulletin* are $18.00 per year for residents of the United States or Canada and $12.00 per year for residents of other countries. Special rates of $9.00 per year are available to students. Rates in each category are one-third higher for members who wish both *Annals* as well as the *Bulletin*. Inquiries regarding membership in the Institute should be sent to the Treasurer of the Institute.

Subscription Rates. Current volumes (six issues per calendar year) of the *Annals of Probability* and the *Annals of Statistics* are each $25.00. Members of the Institute of Mathematical Statistics pay different rates (see above). Single issues are $5.00. Back numbers of both *Annals* and the *Annals of Mathematical Statistics* (Volume 1 through 43) may be purchased from the Treasurer.

The Annals of Statistics, Volume 2, Number 1, January 1974. Published bimonthly in January, March, May, July, September, and November by The Institute of Mathematical Statistics, MR IV—Room 131, University of California, S.F., San Francisco, California 94122.

Mail to the *Annals of Statistics* should be addressed to either the Editor, Managing Editor or the Treasurer as described above. It should *not* be addressed to Waverly Press.

PRINTED AT THE
WAVERLY PRESS, INC., BALTIMORE, MARYLAND 21202 U.S.A.
Second-class postage paid at San Francisco, California and at additional mailing offices

PAST EDITORS OF THE ANNALS OF STATISTICS

INGRAM OLKIN, 1972–1973

Published bimonthly by the Institute of Mathematical Statistics in January, March, May, July, September and November.

EDITORIAL POLICY

The main aim of the *Annals of Statistics* and the *Annals of Probability* is to publish original contributions related to the theory of statistics and probability. The emphasis is on quality, importance and interest; formal novelty and mathematical correctness alone are not sufficient. Particularly appropriate for the *Annals* are important theoretical papers and applied contributions which either stimulate theoretical interest in important new problems or make substantial progress in existing applied areas. Of special interest are authoritative expository or survey articles, whether on theoretical areas of vigorous recent development, or on specific applications. All papers are refereed.

THE ANNALS OF STATISTICS

INSTRUCTIONS FOR AUTHORS

Submission of Papers. Papers to be submitted for publication should be sent to the Editor of the *Annals of Statistics*. (For current address, see the latest issue of the *Annals*.) The original (or xerox copy) should be submitted with two additional copies on paper that will take ink corrections. The manuscript will *not* normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

Preparation of Manuscripts. Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

Submission of Reference Papers. Copies (preferably two) of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

Title and Abbreviated Title. The title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be "A Limit Theorem for Conditioned Recurrent Random Walk Attracted to a Stable Law," with the running head "Limit Theorem for Recurrent Random Walk" or possibly "Recurrent Random Walk Attracted to a Stable Law", depending on the emphasis to be conveyed.

Summary. Each manuscript is required to contain a summary, which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of a summary will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading "Summary", followed by the title of the paper. Formulas should be used as sparingly as possible. The summary should not make reference to results or formulas in the body of the paper—it should be self-contained.

Footnotes. Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced, on a separate page.

Key Words. Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1970 subject classifications. Primary—; Secondary—.
Key words and phrases.

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use, as an Appendix to *Mathematical Reviews* Index to Volume 39, June 1970. (See, also, *The Notices of the American Mathematical Society*, June 1970, pp. 616–618, for more details.) The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

List of Symbols. A completely typewritten list of symbols, identified typographically, not mathematically, should be attached to the manuscript on a separate page. Distinguish between "oh" and "zero"; "ell" and "one"; "kappa" and "kay", etc. Indicate also when special type is required (Greek, German, script, boldface, etc.); other letters will be set in italics.

Figures and Tables. Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

Formulas. Fractions in the text are preferably written with the solidus or negative exponent; thus, $(a + b)/(c + d)$ is preferred to $\frac{a+b}{c+d}$, and $(2\pi)^{-1}$ or $1/(2\pi)$ to $\frac{1}{2\pi}$. Also, $a^{b(c)}$ and $a_{b(c)}$ are preferred to a^{bc} and a_{bc}, respectively. Complicated exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

References. References should be typed double-spaced and should follow the style:

[5] Wilks, S. S. (1938). The large-sample distribution of the likelihood ratio for testing composite hypotheses. *Ann. Statist.* 1 60–62.

In textual material, the format "... Wilks (1938) ..." is normally preferred to "... Wilks [5] ...". Multiple references can be distinguished as "... Wilks (1938a) ...". Abbreviations for journals should be taken from *Mathematical Reviews* Index to Volume 40, 1970, pp. 1683–1702.

Proofs. Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the *Annals of Statistics*. (For current address, see the latest issue of the *Annals*.)
