

The Annals of Probability

Vol. 15

July 1987

No. 3

Articles

- The Glivenko-Cantelli problem MICHEL TALAGRAND
A refinement of the KMT inequality for the uniform empirical process
DAVID M. MASON AND WILLEM R. VAN ZWET
- The contribution to the sum of the summand of maximum modulus . . WILLIAM E. PRUITT
A central limit theorem under metric entropy with L_2 bracketing MINA OSSIANDER
Edgeworth expansion for Student's t statistic under minimal moment conditions
PETER HALL
- A law of the iterated logarithm for sums of extreme values from a distribution with a
regularly varying upper tail ERICH HAEUSLER AND DAVID M. MASON
- Recurrence, transience and bounded harmonic functions for diffusions
in the plane ROSS G. PINSKY
Asymptotic properties of some multidimensional diffusions CHARLES R. CLARK
On the means of approach to the boundary of Brownian motion M. CRANSTON
Singular perturbations of degenerate diffusions CAROL BEZUIDENHOUT
Stopping times of Bessel processes R. DANTE DEBLASSIE
A conditional limit theorem for the frontier of a branching Brownian motion
S. P. LALLEY AND T. SELLKE
- Decoupling inequalities for polynomial chaos STANISLAW KWAPIEN
Double stochastic integrals, random quadratic forms and random series
in Orlicz spaces STANISLAW KWAPIEN AND WOJBOR A. WOYCZYNSKI
Quadratic variation for a class of $L \log^+ L$ -bounded two-parameter martingales
NIKOS E. FRANGOS AND PETER IMKELLER
- A decomposition theorem for binary Markov random fields
BRUCE HAJEK AND TOBY BERGER
- Decomposition of binary random fields and zeros of partition functions
CHARLES M. NEWMAN
- Edge fluctuations for the one dimensional supercritical contact process
ANTONIO GALVES AND ERRICO PRESUTTI
- Absence of a stationary distribution for the edge process of subcritical oriented
percolation in two dimensions ROBERTO HENRIQUE SCHONMANN
- Random walks arising in random number generation
F. R. K. CHUNG, PERSI DIACONIS AND R. L. GRAHAM
- One-dimensional circuit-switched networks F. P. KELLEY
On probabilistic analysis of a coalesced hashing algorithm B. PITTEL
On a problem of Kahane about the image of Gaussian Taylor series J. S. HWANG
An extension of Spitzer's integral representation theorem with an application
ABDULHAMID A. ALZAID, C. RADHAKRISHNA RAO AND D. N. SHANBHAG
- Majorization, randomness and dependence for multivariate distributions HARRY JOE

Book Review

- Review of *Point Processes and their Statistical Inference* by Alan F. Karr
PETER DONNELLY

Corrections

- The influence of Mark Kac on probability theory HARRY KESTEN
Local nondeterminism and the zeros of Gaussian processes JACK CUZICK
On the average number of real roots of a random algebraic equation K. FARAHMAND

IMS LECTURE NOTES — MONOGRAPH SERIES

This series provides an avenue for the rapid, but carefully refereed, publication of important research results in comprehensive form and expository style. These volumes should be of great value to researchers and advanced students in statistics, probability, and related fields. The series editor is Shanti S. Gupta, Purdue University.

7 APPROXIMATE COMPUTATION OF EXPECTATIONS

by *Charles Stein*

An abstract approach to the approximate computation of expectations.

One aim of the theory of probability is the effective computation of probabilities that are given in principle.

This volume presents an abstract approach to this issue keeping in mind the interaction of theoretical ideas and concrete problems.

164 Pages

List Price \$20

8 ADAPTIVE STATISTICAL PROCEDURES AND RELATED TOPICS

edited by *John Van Ryzin*

Proceedings of the Symposium on Adaptive Statistical Procedures and Related Topics, Brookhaven National Laboratory, June 1985.

This symposium was held in honor of the 70th birthday of Herbert Robbins and covers the broad range of topics to which he has made fundamental contributions including stochastic approximation, empirical Bayes and sequential analysis. This volume contains 36 papers (five in abstract form) by students and/or colleagues of Robbins.

9 FUNDAMENTALS OF STATISTICAL EXPONENTIAL FAMILIES WITH APPLICATIONS IN STATISTICAL DECISION THEORY

by *Lawrence D. Brown*

A systematic treatment of the analytical and probabilistic properties of exponential families.

Many if not most of the successful mathematical formulations of statistical questions involve specific exponential families of distributions. This volume examines these mathematical formulations from the perspective of general exponential families with a variety of statistical applications in mind.

& ADDITIONAL TITLES

Previously published: Volume 1, *Essays on the Prediction Process* by Frank Knight (\$15/members \$9); Volume 2, *Survival Analysis* edited by John Crowley and Richard A. Johnson (\$25/members \$15); Volume 3, *Empirical Processes* by Peter Gaenssler (\$20/members \$12); Volume 4, *Zonal Polynomials* by Akimichi Takemura (\$15/members \$9); Volume 5, *Inequalities in Statistics and Probability* edited by Y. L. Tong (\$25/members \$15); Volume 6, *The Likelihood Principle* by James Berger and Robert Wolpert (\$25/members \$15). Forthcoming: *Differential Geometry in Statistical Inference* by S. Amari, O. Barndorff-Nielsen, R. Kass, S. Lauritzen, and C. R. Rao; *Group Theory in Statistics* by P. Diaconis.

Prepaid orders for individual volumes and requests for standing order enrollment (eligible for 20% prepublication discounts from list prices) should be sent to
