

Keyword Index

- analytic and Lipschitz functions; efficiency; mean integrated squared error; mean squared error; 273
- anticipating stochastic differential equation; anticipating stochastic integral; Azéma's martingale; homogeneous chaos; multiple stochastic integral; normal martingales; stochastic integration by parts; structure equation; variational derivative; 81
- anticipating stochastic integral; Azéma's martingale; homogeneous chaos; multiple stochastic integral; normal martingales; stochastic integration by parts; structure equation; variational derivative; anticipating stochastic differential equation; 81
- asymptotic distribution; blur; maximum likelihood; orthogonalization; 185
- asymptotic local minimax risk; density estimation; Kaplan–Meier estimator; kernel; random censorship; 519
- Azéma's martingale; homogeneous chaos; multiple stochastic integral; normal martingales; stochastic integration by parts; structure equation; variational derivative; anticipating stochastic differential equation; anticipating stochastic integral; 81
- B*-spline surface; bias compensation; epicentre; objective Bayesian smoothing; penalized sum of squares; 167
- Bahadur efficiency; Chernoff's function; large-deviation efficiency; large-deviation principle; minimax risk; statistical experiments; 203
- bandwidth choice; local linear regression; mean squared error; nonlinear regression; optimal design; sequential design; 3
- Bayes estimates; model selection; binary regression; Consistency; 411
- bias compensation; epicentre; objective Bayesian smoothing; penalized sum of squares; *B*-spline surface; 167
- binary regression; Consistency; Bayes estimates; model selection; 411
- blocking methods; bootstrap; kernel methods; resampling; time series; variance estimation; 305
- blur; maximum likelihood; orthogonalization; asymptotic distribution; 185
- bootstrap; kernel methods; resampling; time series; variance estimation; blocking methods; 305
- Brownian motion; law of the iterated logarithm; Lévy's area process; 115
- Chernoff's function; large-deviation efficiency; large-deviation principle; minimax risk; statistical experiments; Bahadur efficiency; 203
- conditional expectation; kernel estimator; Nadaraya–Watson estimator; nonparametric regression; strong convergence; strong law of large numbers; universal convergence; 143
- conditional independence; graphical Markov model; quasi-linear dependence; separation criteria; triangular matrix decomposition; 477
- conditional inference; Laplace's approximation; likelihood ancillary; relative error; saddlepoint approximation; tail-area approximation; 35
- Consistency; Bayes estimates; model selection; binary regression; 411
- continuous local martingales; Markov moments; windings of planar random process; 461
- convex sets; dilation; measure metric; ordering of distributions; random determinants; random convex sets; 377
- density estimation; Kaplan–Meier estimator; kernel; random censorship; asymptotic local minimax risk; 519
- diffusion processes; discrete time observations; empirical distributions; limit theorems; mathematical finance; stochastic volatility; 283
- dilation; measure metric; ordering of distributions; random determinants; random convex sets; convex sets; 377
- discrete time observations; empirical distributions; limit theorems; mathematical finance; stochastic volatility; diffusion processes; 283
- efficiency; mean integrated squared error; mean squared error; analytic and Lipschitz functions; 273

- empirical distributions; limit theorems; mathematical finance; stochastic volatility; diffusion processes; discrete time observations; 283
- empirical processes; finite-dimensional metric space; maximum likelihood estimation; minimum contrast estimators; nonparametric estimation; rates of convergence; sieves; 329
- epicentre; objective Bayesian smoothing; penalized sum of squares; B -spline surface; bias compensation; 167
- finite-dimensional metric space; maximum likelihood estimation; minimum contrast estimators; nonparametric estimation; rates of convergence; sieves; empirical processes; 329
- graphical Markov model; quasi-linear dependence; separation criteria; triangular matrix decomposition; conditional independence; 477
- Groebner basis; succession probability; Laplace; Markov chain; 401
- homogeneous chaos; multiple stochastic integral; normal martingales; stochastic integration by parts; structure equation; variational derivative; anticipating stochastic differential equation; anticipating stochastic integral; Azéma's martingale; 81
- jump-point estimation; nonparametric regression; optimal constant; tapered orthogonal series estimator; 15
- Kaplan–Meier estimator; kernel; random censorship; asymptotic local minimax risk; density estimation; 519
- kernel; random censorship; asymptotic local minimax risk; density estimation; Kaplan–Meier estimator; 519
- kernel estimator; Nadaraya–Watson estimator; nonparametric regression; strong convergence; strong law of large numbers; universal convergence; conditional expectation; 143
- kernel methods; resampling; time series; variance estimation; blocking methods; bootstrap; 305
- Laplace's approximation; likelihood ancillary; relative error; saddlepoint approximation; tail-area approximation; conditional inference; 35
- Laplace; Markov chain; Groebner basis; succession probability; 401
- large-deviation efficiency; large-deviation principle; minimax risk; statistical experiments; Bahadur efficiency; Chernoff's function; 203
- large-deviation principle; minimax risk; statistical experiments; Bahadur efficiency; Chernoff's function; large-deviation efficiency; 203
- law of the iterated logarithm; Lévy's area process; Brownian motion; 115
- Lévy's area process; Brownian motion; law of the iterated logarithm; 115
- likelihood ancillary; relative error; saddlepoint approximation; tail-area approximation; conditional inference; Laplace's approximation; 35
- limit theorems; mathematical finance; stochastic volatility; diffusion processes; discrete time observations; empirical distributions; 283
- local linear regression; mean squared error; nonlinear regression; optimal design; sequential design; bandwidth choice; 3
- Malliavin's calculus; partial differential equations involving measure data; stochastic partial differential equations; variational inequalities; 445
- Markov chain; Groebner basis; succession probability; Laplace; 401
- Markov moments; windings of planar random process; continuous local martingales; 461
- mathematical finance; stochastic volatility; diffusion processes; discrete time observations; empirical distributions; limit theorems; 283
- maximum likelihood; orthogonalization; asymptotic distribution; blur; 185
- maximum likelihood estimation; minimum contrast estimators; nonparametric estimation; rates of convergence; sieves; empirical processes; finite-dimensional metric space; 329
- mean squared error; analytic and Lipschitz functions; efficiency; mean integrated squared error; 273
- measure metric; ordering of distributions; random determinants; random convex sets; convex sets; dilation; 377

- mean integrated squared error; mean squared error; analytic and Lipschitz functions; efficiency; 273
- mean squared error; nonlinear regression; optimal design; sequential design; bandwidth choice; local linear regression; 3
- minimum contrast estimators; nonparametric estimation; rates of convergence; sieves; empirical processes; finite-dimensional metric space; maximum likelihood estimation; 329
- minimax risk; statistical experiments; Bahadur efficiency; Chernoff's function; large-deviation efficiency; large-deviation principle; 203
- model selection; binary regression; Consistency; Bayes estimates; 411
- multiple stochastic integral; normal martingales; stochastic integration by parts; structure equation; variational derivative; anticipating stochastic differential equation; anticipating stochastic integral; Azéma's martingale; homogeneous chaos; 81
- Nadaraya–Watson estimator; nonparametric regression; strong convergence; strong law of large numbers; universal convergence; conditional expectation; kernel estimator; 143
- nonlinear regression; optimal design; sequential design; bandwidth choice; local linear regression; mean squared error; 3
- nonparametric estimation; rates of convergence; sieves; empirical processes; finite-dimensional metric space; maximum likelihood estimation; minimum contrast estimators; 329
- nonparametric regression; strong convergence; strong law of large numbers; universal convergence; conditional expectation; kernel estimator; Nadaraya–Watson estimator; 143
- nonparametric regression; optimal constant; tapered orthogonal series estimator; jump-point estimation; 15
- normal martingales; stochastic integration by parts; structure equation; variational derivative; anticipating stochastic differential equation; anticipating stochastic integral; Azéma's martingale; homogeneous chaos; multiple stochastic integral; 81
- objective Bayesian smoothing; penalized sum of squares; B -spline surface; bias compensation; epicentre; 167
- optimal design; sequential design; bandwidth choice; local linear regression; mean squared error; nonlinear regression; 3
- optimal constant; tapered orthogonal series estimator; jump-point estimation; nonparametric regression; 15
- ordering of distributions; random determinants; random convex sets; convex sets; dilation; measure metric; 377
- orthogonalization; asymptotic distribution; blur; maximum likelihood; 185
- partially specified model; semimartingale; survival analysis; partial likelihood; 65
- partial differential equations involving measure data; stochastic partial differential equations; variational inequalities; Malliavin's calculus; 445
- partial likelihood; partially specified model; semimartingale; survival analysis; 65
- penalized sum of squares; B -spline surface; bias compensation; epicentre; objective Bayesian smoothing; 167
- quasi-linear dependence; separation criteria; triangular matrix decomposition; conditional independence; graphical Markov model; 477
- random censorship; asymptotic local minimax risk; density estimation; Kaplan–Meier estimator; kernel; 519
- random convex sets; convex sets; dilation; measure metric; ordering of distributions; random determinants; 377
- random determinants; random convex sets; convex sets; dilation; measure metric; ordering of distributions; 377
- rates of convergence; sieves; empirical processes; finite-dimensional metric space; maximum likelihood estimation; minimum contrast estimators; nonparametric estimation; 329
- relative error; saddlepoint approximation; tail-area approximation; conditional inference; Laplace's approximation; likelihood ancillary; 35
- resampling; time series; variance estimation; blocking methods; bootstrap; kernel methods; 305
- saddle-point approximation; serial correlation; serial correlogram; 497

- saddlepoint approximation; tail-area approximation; conditional inference; Laplace's approximation; likelihood ancillary; relative error; 35
- self-similar processes; small tails; stable processes; stationary increments; 127
- semimartingale; survival analysis; partial likelihood; partially specified model; 65
- separation criteria; triangular matrix decomposition; conditional independence; graphical Markov model; quasi-linear dependence; 477
- sequential design; bandwidth choice; local linear regression; mean squared error; nonlinear regression; optimal design; 3
- serial correlation; serial correlogram; saddle-point approximation; 497
- serial correlogram; saddle-point approximation; serial correlation; 497
- small tails; stable processes; stationary increments; self-similar processes; 127
- stable processes; stationary increments; self-similar processes; small tails; 127
- stationary increments; self-similar processes; small tails; stable processes; 127
- statistical experiments; Bahadur efficiency; Chernoff's function; large-deviation efficiency; large-deviation principle; minimax risk; 203
- stochastic integration by parts; structure equation; variational derivative; anticipating stochastic differential equation; anticipating stochastic integral; Azéma's martingale; homogeneous chaos; multiple stochastic integral; normal martingales; 81
- stochastic partial differential equations; variational inequalities; Malliavin's calculus; partial differential equations involving measure data; 445
- stochastic volatility; diffusion processes; discrete time observations; empirical distributions; limit theorems; mathematical finance; 283
- strong convergence; strong law of large numbers; universal convergence; conditional expectation; kernel estimator; Nadaraya–Watson estimator; nonparametric regression; 143
- strong law of large numbers; universal convergence; conditional expectation; kernel estimator; Nadaraya–Watson estimator; nonparametric regression; strong convergence; 143
- structure equation; variational derivative; anticipating stochastic differential equation; anticipating stochastic integral; Azéma's martingale; homogeneous chaos; multiple stochastic integral; normal martingales; stochastic integration by parts; 81
- succession probability; Laplace; Markov chain; Groebner basis; 401
- survival analysis; partial likelihood; partially specified model; semimartingale; 65
- tail-area approximation; conditional inference; Laplace's approximation; likelihood ancillary; relative error; saddlepoint approximation; 35
- tapered orthogonal series estimator; jump-point estimation; nonparametric regression; optimal constant; 15
- time series; variance estimation; blocking methods; bootstrap; kernel methods; resampling; 305
- triangular matrix decomposition; conditional independence; graphical Markov model; quasi-linear dependence; separation criteria; 477
- universal convergence; conditional expectation; kernel estimator; Nadaraya–Watson estimator; nonparametric regression; strong convergence; strong law of large numbers; 143
- variance estimation; blocking methods; bootstrap; kernel methods; resampling; time series; 305
- variational inequalities; Malliavin's calculus; partial differential equations involving measure data; stochastic partial differential equations; 445
- variational derivative; anticipating stochastic differential equation; anticipating stochastic integral; Azéma's martingale; homogeneous chaos; multiple stochastic integral; normal martingales; stochastic integration by parts; structure equation; 81
- windings of planar random process; continuous local martingales; Markov moments; 461
