

## INDEX for Volume 97

W. Ballmann, <i>On eta-functions for nilmanifolds</i> .....	1
S. Bloch, A. Huang, B. H. Lian, V. Srinivas, & S.-T. Yau, <i>On the holonomic rank problem</i> .....	11
A. Bolsinov & D. Tsonev, <i>On a new class of holonomy groups in pseudo-Riemannian geometry</i> .....	377
S. Brendle, <i>Rotational symmetry of Ricci solitons in higher dimensions</i> .....	191
D.-C. Chang, S.-C. Chang, & J. Tie, <i>Calabi-Yau theorem and Hodge-Laplacian heat equation in a closed strictly pseudoconvex CR manifold</i> .....	395
A. Dancer, F. Kirwan, & A. Swann, <i>Twistor spaces for hyperkähler implosions</i> .....	37
E. V. Ferapontov & B. S. Kruglikov, <i>Dispersionless integrable systems in 3D and Einstein-Weyl geometry</i> .....	215
R. J. Gardner, D. Hug, & W. Weil, <i>The Orlicz-Brunn-Minkowski theory: A general framework, additions, and inequalities</i> .....	427
P. Goodey & W. Weil, <i>Sums of sections, surface area measures, and the general Minkowski problem</i> .....	477
N. Hitchin & L. P. Schaposnik, <i>Nonabelianization of Higgs bundles</i>	79
F. Luo & S. P. Tan, <i>A dilogarithm identity on moduli spaces of curves</i> .....	255
H. Ma & Y. Ohnita, <i>Hamiltonian stability of the Gauss images of homogeneous isoparametric hypersurfaces. I</i> .....	275
Y. Manin & M. Marcolli, <i>Kolmogorov complexity and the asymptotic bound for error-correcting codes</i> .....	91
F. Martín & B. White, <i>Properly embedded, area-minimizing surfaces in hyperbolic 3-space</i> .....	515
S. Müller & M. Röger, <i>Confined structures of least bending energy</i>	109
M. Sáez & O.C. Schnürer, <i>Mean curvature flow without singularities</i> .....	545
D. Sullivan, <i>3D incompressible fluids: Combinatorial models, eigenspace models, and a conjecture about well-posedness of the 3D zero viscosity limit</i> .....	141
L. Verdiani & W. Ziller, <i>Concavity and rigidity in non-negative curvature</i> .....	349
C. Voisin, <i>Bloch's conjecture for Catanese and Barlow surfaces</i> ..	149
D. Zagier, <i>Lines on the Dwork quintic pencil and its higher degree analogues</i> .....	177
