Preface.....	v
List of Contributors .....	vii
<b>1. Use of exchangeable pairs in the analysis of simulations</b>	
<i>Charles Stein, Persi Diaconis, Susan Holmes and Gesine Reinert</i>	
1.1 Introduction .....	1
1.2 Exchangeable pairs .....	2
1.2.1 Definitions.....	2
1.2.2 Reversible Markov chains .....	3
1.3 First examples .....	5
1.3.1 Transition matrix Monte Carlo.....	6
1.3.2 A Poisson–Binomial example.....	7
1.3.3 Another example: The Ising model.....	11
1.4 Exchangeable pairs as auxiliary variates.....	12
1.4.1 Basic formulae.....	12
1.5 Distributional approximations.....	16
<b>2. Stein’s method for Markov chains: first examples</b>	
<i>Persi Diaconis</i>	
2.1 Introduction .....	26
2.2 Convergence to the uniform distribution for simple random walk	27
2.3 An extension to general measures .....	31
2.4 The Ehrenfest Urn.....	35
2.5 A Fourier connection.....	38
<b>3. Stein’s method for birth and death chains</b>	
<i>Susan Holmes</i>	
3.1 Overview .....	42
3.2 Examples .....	43
3.2.1 Bounds on the distance between Poisson and binomial ..	43
3.2.2 Hypergeometric and binomial .....	45
3.3 Notation and context .....	47
3.3.1 Exchangeable variables.....	47
3.3.2 Operators of antisymmetric functions .....	47
3.3.3 A characterizing operator for the target distribution .....	48
3.3.4 A useful diagram.....	48
3.4 Birth and death chains.....	49
3.4.1 Exchangeable pairs .....	49
3.4.2 A generalization of Todhunter’s formula .....	50
3.4.3 Characterizing operators .....	52
3.4.4 Examples .....	53
3.5 General discrete target distribution .....	58
3.6 Appendix: Some numbers .....	61
<b>4. Stein’s method and non-reversible Markov chains</b>	
<i>Jason Fulman</i>	
4.1 Introduction .....	66
4.2 Construction of an exchangeable pair $(W, W')$ .....	68
4.3 Bounding the error terms .....	71

<b>5. The stationary distribution in the antivoter model: exact sampling and approximations</b>	
<i>Mark Huber and Gesine Reinert</i>	
5.1 The antivoter model.....	75
5.2 Exact sampling .....	76
5.3 The complete graph .....	81
5.4 The multipartite graph.....	82
5.5 The empirical Stein's method .....	87
<b>6. Stein's method for the bootstrap</b>	
<i>Susan Holmes and Gesine Reinert</i>	
6.1 Overview.....	93
6.2 Notation .....	94
6.2.1 Exchangeable variables .....	94
6.2.2 Operators of antisymmetric functions.....	94
6.2.3 Bootstrap of the mean .....	94
6.2.4 Bootstrap of the empirical process.....	97
6.3 Gaussian approximations for empirical measures using Stein's method .....	99
6.3.1 Application to the bootstrap: A general theorem.....	102
6.4 Dependency graphs .....	111
6.4.1 Special procedure for bootstrapping dependent data ....	113
6.5 Applications of the bootstrap for dependent variables.....	125
6.5.1 Spatial process .....	126
