1	Introduction	1
2	Preliminaries	9
2.1	Notation	9
2.2	Function spaces	11
2.3	The Fourier transform and distributions	15
2.4	The Sobolev spaces	21
2.5	Functions with values in Banach spaces	25
2.6	The Radon transform	27
	Notes	29
3	Linear Wave Equations	30
3.1	The explicit formula for solutions	30
3.2	The energy inequality	39
3.3	Solutions in the Sobolev spaces	48
3.4	Basic decay property of solutions	52
3.5	The Friedlander radiation fields	57
	Notes	63
4	Local Existence for Nonlinear Wave Equations	65
4.1	Preliminary estimates	65
4.2	Local existence theorems	67
4.3	Uniqueness of C^2 -solutions	74
	Notes	77
5	Vector Fields Associated with Wave Equations	79
5.1	Introduction	79
5.2	Basic properties	80
5.3	The Klainerman–Sobolev inequality	84
5.4	L^1 – L^∞ decay estimates	89
5.5	Basic estimates for nonlinear terms	104
	Notes	107
6	Global Existence and Blow-Up for Small Data	108
6.1	Global existence results	108
6.2	Blow-up in finite time	113
6.3	Asymptotically free solutions	118
	Notes	125

7 Wave Equations with More General Nonlinearity	126
7.1 Decay estimates of the solution in three space dimensions	126
7.2 John's global existence result	129
7.3 L^2 -estimates	136
7.4 The Case in Three Space Dimensions	141
Notes	148
8 Systems of Reduced Equations	153
8.1 Basic estimates	153
8.2 The general quasilinear case	155
8.3 The semilinear case	157
8.4 Detailed lower bounds of the lifespan	163
9 The Null Condition	175
9.1 Estimates for the null forms	175
9.2 Three space dimensional case	180
9.3 Two space dimensional case	183
Notes	190
10 Weaker Conditions for Global Existence	196
10.1 The weak null condition	196
10.2 Global existence under a weaker condition	199
10.3 Asymptotic behavior of global solutions	214
Notes	242
11 Restricted Usage of Vector Fields	245
11.1 Systems with Multiple Propagation Speeds	245
11.2 Systems of semilinear wave and Klein–Gordon equations	252
Notes	265
Appendix A The Riemann integral in Banach spaces	271
Appendix B Distribution-valued functions	274
Appendix C The proof of Theorem 11.6	277
