14 INVARIANT MEASURES ON GROUPS AND THEIR USE IN STATISTICS by Robert A. Wijsman

A discussion of distributions in statistical models with groups of invariance transformations.

This monograph deals with problems concerning distributions in statistical models in which there is a group of invariance transformations. The methods presented make use of mathematical tools that involve the interplay between groups and integration. The author demonstrates by examples the statistical usefulness of these methods and presents a systematic account of their mathematical background.

15 ANALYTIC STATISTICAL MODELS by Ib M. Skovgaard

An introduction to analytic statistical models.

This monograph introduces a class of statistical models (the analytic models) which is sufficiently well behaved to satisfy regularity conditions of the type typically met in theorems of asymptotic statistical inference, and at the same time sufficiently rich to contain many of the commonly used statistical models, including the (sufficiently smooth) curved exponential families. The author defines the class of analytic models, derives its basic mathematical and probabilistic properties, shows that it contains a wide range of common statistical models, and demonstrates its applicability in asymptotics.

16 TOPICS IN STATISTICAL DEPENDENCE edited by H. W. Block, A. R. Sampson, & T. H. Savits

Proceedings of the Symposium on Dependence in Probability and Statistics, Somerset, Pennsylvania, August 1987.

This was the first symposium dedicated solely to research in the area of positive and negative dependence for the modeling and analysis of multivariate data. Many researchers in this broad and diverse field contribute 41 papers to this volume.

JOURNAL OF NONPARAMETRIC STATISTICS

Editor in Chief: Ibrahim A. Ahmad, Division of Statistics, Northern Illinois University, DeKalb, USA

Assistant Editor: P. Laud, Division of Statistics, Northern Illinois University, DeKalb, USA

The *Journal of Nonparametric Statistics* covers all aspects of the subject, including model (distribution)-free methods, rank procedures, parameter-free methods, functions-functional estimation and inference, inference of stochastic processes, nonparametric Bayes methods and decision procedures and semiparametric techniques. Research applying nonparametric methods to medicine, engineering, technology, science and humanities is also covered. The balance between theoretical and applied work is a unique aspect of the Journal, which will prove to be the foremost source of information for researchers in both aspects of the field.

A Selection of Forthcoming Papers

- A Measure of Dependence, *Y. Tuncer and A.E. Sungur*
- On Testing Exponentiality against HNBUE Alternatives, *E.E. Aly*
- Generalization of Steel's Many-one Mann-Whitney Test, *J.D. Spurrier*
- Kernel Based Estimators of Ratio Functions, *P.N. Patil, M.T. Wells and J.S. Marron*
- Asymptotically Optimal Bandwidth for Smooth Nonparametric Quantile Estimator under Censoring, *Y.L. Lio and W.J. Padgett*
- Exact Rates of A.S. Convergence of a Recursive Kernel Estimate of a PDF: Application to Regression and Hazard Rate Estimation, *G.G. Roussas*

Subscriber Incentive Plan - Limited Time Offer

By placing a subscription to a journal during the first volume of publication, North American and Western European academic libraries receive an introductory 10% off the standard academic rate. This discount is effective as long as a continuous subscription is maintained to the journal. Greater discounts may be offered for future renewals. Please contact your agent or STBS for details.
