# Going Sour

*Science and Politics of Acid Rain*

1985. 160 pages, Paperback  
sFr. 34.-/DM 41.-  
ISBN 3-7643-3251-4

Acid rain is the most controversial environmental problem of our time. For the first time in human history, pollution from the burning of coal and oil is altering the face of the planet on a global scale - damaging lakes and streams, forests, soils, and human health. Why is it that more than a hundred years after acid rain was first recognized as a threat, we still have not taken action to control the problem? *GOING SOUR* delves into the scientific, political, social, and economic issues behind the headlines, and presents a provocative glimpse of the behind-the-scenes maneuvering that has thwarted a solution to the problem.

**Contents:**

- Acid rain: an overview of the issues
  - The composition of rain
  - The causes of acid rain
  - The transport of acid pollution
  - The effects of acid rain
  - Strategies for reducing acid rain
  - Acid rain and the politics of science
  - Acid rain and the law
  - Conclusion
- a comprehensive bibliography for researchers and students in the field.
