Partial Differential Equations

→ The introductory textbook

This text introduces of basic examples of partial differential equations, arising in continuum mechanics, electromagnetism, complex analysis and other areas, and develops a number of tools for their solution, including particularly Fourier analysis, distribution theory, and Sobolev spaces. These tools are applied to the treatment of basic problems in linear PDE including the Laplace equation, heat equation, and wave equation, as well as more general elliptic, parabolic, and hyperbolic equations. This book is also available in Hardcover as Volume 1 in the 3 volume set (below).

Partial Differential Equations

I: Basic Theory

1996 Approx 586 pages 37 figures (Applied Mathematical Sciences, Vol 115) Hardcover DM 98,- ISBN 0-387-94653-5

Contents: 1) Basic theory of ODE and vector fields; 2) The Laplace equation and wave equation; 3) Fourier analysis, distributions, and constant coefficient linear PDE; 4) Sobolev spaces; 5) Linear elliptic equations; 6) Linear evolution equations; Appendix A: Outline of functional analysis; Appendix B: Manifolds, vector bundles, and Lie groups

II: Qualitative Studies of Linear Equations

1996 Approx 545 pages 13 figures (Applied Mathematical Sciences, Vol 116) Hardcover DM 98,- ISBN 0-387-94651-9

Contents: 7) Pseudodifferential operators; 8) Spectral theory; 9) Scattering by obstacles; 10) Dirac operators and index theory; 11) Brownian motion and potential theory; 12) The partial Neumann problem; Appendix C: Connections and curvature

III: Nonlinear Equations

1996 Approx 650 pages 65 figures (Applied Mathematical Sciences, Vol 117) Hardcover DM 98,- ISBN 0-387-94652-7

Contents: 13) Function space and operator theory for nonlinear analysis; 14) Nonlinear elliptic equations; 15) Nonlinear parabolic equations; 16) Nonlinear hyperbolic equations; 17) Euler and Navier-Stokes equations for incompressible fluids; 18) Einstein's equations
