## Relativity and Scientific Computing

Computer Algebra, Numerics, Visualization  
1996 XIX, 389 pages, 80 figures, 25 in color,  
11 tables.

Hardcover DM 114,- ISBN 3 540-60361-1

Springer once again leads the way in scientific publishing with this important new title! **Relativity and Scientific Computing** is comprised of lectures by leading scientists from internationally reputed centers of research and teaching. The book itself is split into four parts covering numerics, computer algebra, visualization, and exotic smoothness on spacetime. An excellent introduction to the vanguard of scientific computing for graduate students and professionals who wish to specialize in relativity, gravitation, and/or astrophysics

W. Rindler

## Essential Relativity

Special, General, and Cosmological  
(Text and Monographs in Physics)

2nd rev. ed. 1977, 5th printing 1995.

XV, 284 pages, 44 figures.

Softcover DM 96,- ISBN 3-540-10090-3

J. Foster, J. D. Nightingale

## A Short Course in General Relativity

2nd ed 1995. IX, 230 pages 45 figures,

Softcover DM 48,-

ISBN 3-540-94295-5

Suitable for a one-semester course in general relativity for advanced undergraduates or beginning graduate students. It clarifies mathematical aspects of the subject without sacrificing physical understanding. Many examples and problems help guide the students.

R. A. Mould

## Basic Relativity

1st ed 1994. Corr. 3rd printing 1996.

XIV, 452 pages, 144 figures,

Hardcover DM 85,-

ISBN 3-540-94188 6

A comprehensive textbook for advanced undergraduates and beginning graduate students in physics or astrophysics, developing both the formalism and the physical ideas of special and general relativity in a logical and coherent way
