THE NATURAL MEDIAN

BY D. LANDERS AND L. ROGGE

This is an acknowledgment of priority to our paper "The natural median," *Ann. Probability* **9** (1981), 1041–1042. For the case of a sample of n numbers the "natural median" was discovered in 1920: D. Jackson, *Bull. Amer. Math. Soc.* **27** (1921), 160–164. For the case $X \in L^p$ and $p > 1$ the concept of a "natural median" (called Hauptmedian) can also be found in H. Kellerer, *Math. Zeitschr.* **73** (1960), 197–218.
