NSF-CBMS Regional Conference Series in Probability and Statistics
Volume 3

STOCHASTIC CURVE ESTIMATION

Sponsored by the
Conference Board of the Mathematical Sciences
Supported by the
National Science Foundation
Published by the
Institute of Mathematical Statistics
and the
American Statistical Association

These lecture notes result from the NSF-CBMS Regional Conference held at the University of California, Davis, in June 1989. Aspects of curve estimation in the context of independent and dependent observations are discussed in ten lectures—origins, local asymptotics, global measures of deviation, cross-validation, measures of short-range dependence, probability density and regression estimation in the case of short-range dependence, spectral densities and cumulants, examples of long-range dependence, curve estimation and long-range dependence, and open questions.

Murray Rosenblatt
University of California, San Diego

The Institute of Mathematical Statistics and the American Statistical Association are proud to copublish the *NSF-CBMS Regional Conference Series in Probability and Statistics*. The volumes in this *Series* are based on the NSF-CBMS regional research conferences and join SIAM's *NSF-CBMS Series in Applied Mathematics* and AMS's *NSF-CBMS Series in Mathematics*. Volume 3, *Stochastic Curve Estimation* by M. Rosenblatt is now available at the following prices:

List Price $25
IMS/ASA/CBMS Member Price $15

Previous volumes in this *Series* are: Volume 1, *Group Invariance Applications in Statistics* by M. L. Eaton ($25/$15 members); Volume 2, *Empirical Processes: Theory and Applications* by D. Pollard ($20/$12 members). Prepaid orders for individual volumes should be sent to:

Asymptotics for least squares cross-validation bandwidths in nonsmooth cases . . . . . BERT VAN ES

Some nonasymptotic bounds for L_1 density estimation using kernels . . SOMNATH DATTA

IMS Lecture Notes–Monograph Series

18 SELECTED PROCEEDINGS OF THE SHEFFIELD SYMPOSIUM ON APPLIED PROBABILITY

edited by I. V. Basawa & R. L. Taylor

Proceedngs of the Symposium on Applied Probability, Sheffield, August 1989.

The purpose of this Symposium was to focus attention on some of the prominent directions in applied probability. This volume contains several major papers covering models in epidemiology, genetics, random fields, branching processes, random walks, directed polymers and evolution time-scales. A broad array of interesting problems are discussed in the eighteen technical articles included in this volume.

19 STOCHASTIC ORDERS AND DECISION UNDER RISK

edited by K. Mosler & M. Scarsini

A selection of papers presented at the International Workshop on Stochastic Orders and Decision Under Risk, Hamburg, May 1989.

The aim of this workshop was to contribute to the theory and applications of stochastic orders and to gather scientists from probability theory, statistics, reliability, queueing, economics, finance, insurance, and mathematical physics who are using similar mathematical tools. The twenty-three papers in this volume represent a selection of those presented in Hamburg.

20 SPATIAL STATISTICS AND IMAGING

edited by A. Possolo

Proceedings of the Joint IMS-AMS-SIAM Summer Research Conference on Spatial Statistics and Imaging, Brunswick, Maine, June 1988.

The conference assembled an international and interdisciplinary panel of mathematicians, statisticians, astronomers, physicists, electrical engineers, geophysicists, and medical doctors. The twenty-eight papers in this volume report on advancements in the theory and practice of spatial statistics and the technology of digital image restoration and reconstruction.
