ISSN (0090-5364)

AN OFFICIAL JOURNAL OF  
THE INSTITUTE OF MATHEMATICAL STATISTICS

## Articles

Goodness of fit testing in $R^n$ based on the weighted empirical distribution of certain nearest neighbor statistics	MARK F. SCHILLING	1
An infinite-dimensional approximation for nearest neighbor goodness of fit tests	MARK F. SCHILLING	13
Consistent cross-validated density estimation	Y.-S. CHOW, S. GEMAN, AND L.-D. WU	25
The asymptotic joint distribution of regression and survival parameter estimates in the Cox regression model	KENT R. BAILEY	39
Large sample behaviour of the product-limit estimator on the whole line	RICHARD GILL	49
Quasi-likelihood functions	PETER McCULLAGH	59
Sequential sampling based on the observed Fisher information to guarantee the accuracy of the maximum likelihood estimator	PATRICIA GRAMBSCH	68
On the estimation of the parameters of Markov probability models using macro data	A. P. VAN DER PLAS	78
The geometry of mixture likelihoods: a general theory	BRUCE G. LINDSAY	86
On the convergence properties of the EM algorithm	C. F. JEFF WU	95
The generalised problem of the Nile: robust confidence sets for parametric functions	G. A. BARNARD AND D. A. SPROTT	104
Coherent and continuous inference	DAVID A. LANE AND WILLIAM D. SUDDERTH	114
Improving some multiple comparison procedures	ALEXANDER FELZENBAUM, SERGIU HART, AND YOSEF HOCHBERG	121
Asymptotic efficiency of three-stage hypothesis tests	GARY LORDEN	129
Smoothing splines: regression, derivatives and deconvolution	JOHN RICE AND MURRAY ROSENBLATT	141
On the second order asymptotic efficiency of estimators of Gaussian ARMA processes	MASANOBU TANIGUCHI	157
Intermediate efficiency theory and examples	WILBERT C. M. KALLENBERG	170
On BAN estimators for Chi squared test criteria	KERRY G. BEMIS AND VASANT P. BHAPKAR	183
Applying Wald's variance component test	JUSTUS F. SEELY AND YAHIA EL-BASSIOUNI	197
Convergence rates of estimators of a finite parameter: how small can error probabilities be?	ANDREW L. RUKHIN	202
A penalty function approach to smoothing large sparse contingency tables	JEFFREY S. SIMONOFF	208
Optimal properties of one-step variable selection in regression	R. W. BUTLER	219
Minimaxity for randomized designs: some general results	KER-CHAU LI	225
Construction of optimal balanced incomplete block designs for correlated observations	CHING-SHUI CHENG	240
Optimal design and refinement of the linear model with applications to repeated measurements designs	JOACHIM KUNERT	247
Optimal incomplete block designs for comparing treatments with a control	DIBYEN MAJUMDAR AND WILLIAM I. NOTZ	258
Testing whether new is better than used with randomly censored data	YUAN YAN CHEN, MYLES HOLLANDER, AND NAFTALI A. LANGBERG	267
Properties of estimators of quadratic finite population functions: the batch approach	T. P. LIU AND M. E. THOMPSON	275
Negative association of random variables, with applications	KUMAR JOAG-DEV AND FRANK PROSCHAN	286
Choosing between experiments: applications to finite population sampling	GLEN MEEDEN AND MALAY GHOSH	296
An efficient approximate solution to the Kiefer-Weiss problem	MICHAEL D. HUFFMAN	306
A mimimax criterion for choosing weight functions for L-estimates of location	DAVID M. MASON	317

# THE INSTITUTE OF MATHEMATICAL STATISTICS

(Organized September 12, 1935)

*The purpose of the Institute of Mathematical Statistics is to encourage the development, dissemination, and application of mathematical statistics.*

---

## OFFICERS

**President:**

Patrick Billingsley, Department of Statistics, University of Chicago, Chicago, Illinois 60637

**President-Elect:**

Ingram Olkin, Department of Statistics, Stanford University, Stanford, California 94305

**Past President:**

Mark Kac, Department of Mathematics, University of Southern California, Los Angeles, California 90007

**Executive Secretary:**

Kjell Doksum, Department of Statistics, University of California, Berkeley, California 94720

**Treasurer:**

Bruce E. Trumbo, Department of Statistics, California State University, Hayward, California 94542

Send correspondence to: IMS Business Office, 3401 Investment Blvd., Suite 6, Hayward, California 94545

**Program Secretary:**

Richard Johnson, Department of Statistics, University of Wisconsin, 1210 West Dayton St., Madison, Wisconsin 53706

**Editor: *Annals of Statistics***

Michael D. Perlman, Department of Statistics, University of Washington, Seattle, Washington 98195

**Editor: *Annals of Probability***

Harry Kesten, Department of Mathematics, Cornell University, Ithaca, N.Y. 14853

**Editor: *IMS Bulletin***

William C. Guenther, University of Wyoming, Box 3332, University Station, Laramie, Wyoming 82071.

**Editor: *IMS Lecture Notes-Monograph Series***

Shanti S. Gupta, Department of Statistics, Purdue University, West Lafayette, Indiana 47907

**Managing Editor:**

Jagdish S. Rustagi, Department of Statistics, The Ohio State University, Columbus, Ohio 43210

---

**Membership.** Membership dues including a subscription to one *Annals* and *The Institute of Mathematical Statistics Bulletin* are \$37.00 per year for all members. Special rates of \$17.00 per year are available to students. The dues are approximately twenty five percent higher for members who wish both *Annals* as well as the *Bulletin*. Inquiries regarding membership in the Institute should be sent to the Treasurer at the Business Office.

**Subscription Rates.** Current volumes (four issues per calendar year) of the *Annals of Probability* are \$48.00. Single issues are \$13.00 each. Current volumes (four issues per calendar year) of the *Annals of Statistics* are \$55.00. Single issues are \$15.00 each. Members of the Institute of Mathematical Statistics pay different rates (see above). Back numbers of both *Annals* and the *Annals of Mathematical Statistics* (Volume 1 through 43) may be purchased from the Treasurer at the business office.

**The Annals of Statistics.** Volume 11, Number 1, March 1983. Published in March, June, September, and December by The Institute of Mathematical Statistics, IMS Business Office, 3401 Investment Blvd., Suite 6, Hayward, California 94545.

---

Mail to the *Annals of Statistics* should be addressed to either the Editor, Managing Editor or the Treasurer, as described above. It should not be addressed to Waverly Press.

---

PRINTED AT THE  
WAVERLY PRESS, INC., BALTIMORE, MARYLAND 21202 U.S.A.

Second-class postage paid at Hayward, California and at additional mailing offices

## NOTICE

Beginning with the calendar year 1982, the two journals of The Institute of Mathematical Statistics are being printed quarterly. The total numbers of pages per volume are approximately the same as before. Months of publication for 1982 and 1983 are as follows.

*Annals of Statistics*: March, June, September and December

*Annals of Probability*: February, May, August and November

## EDITORIAL POLICY

The main purpose of the *Annals of Statistics* and the *Annals of Probability* is to publish contributions to the theory of statistics and probability and to their applications. The emphasis is on importance and interest, not formal novelty and correctness. Especially appropriate are authoritative expository papers and surveys of areas in vigorous development. All papers are refereed. Contributors to the *Annals of Statistics* should review the editorial in the January 1980 issue.

---

# THE ANNALS OF STATISTICS

## INSTRUCTIONS FOR AUTHORS

**Submission of Papers.** Papers to be submitted for publication should be sent to the Editor of the *Annals of Statistics*. (For current address, see the latest issue of the *Annals*.) The original (or xerox copy) should be submitted with three additional copies on paper that will take ink corrections. The manuscript will *not* normally be returned to the author; when expressly requested by the author, one copy of the manuscript will be returned.

**Preparation of Manuscripts.** Manuscripts should be typewritten, entirely double-spaced, including references, with wide margins at sides, top and bottom. Dittoed or mimeographed papers are acceptable only if completely legible; xerox copies are preferable. When technical reports are submitted, all extraneous sheets and covers should be removed.

**Submission of Reference Papers.** Four copies of unpublished or not easily available papers cited in the manuscript should be submitted with the manuscript.

**Title and Abbreviated Title.** The title should be descriptive and as concise as is feasible, i.e., it should indicate the topic of the paper as clearly as possible, but every word in it should be pertinent. An abbreviated title to be used as a running head is also required, and should be given below the main title. This should normally not exceed 35 characters. For example, a title might be "The Curvature of a Statistical Model, with Applications to Large-Sample Likelihood Methods," with the running head "Curvature of Statistical Model" or possibly "Asymptotics of Likelihood Methods," depending on the emphasis to be conveyed.

**Summary.** Each manuscript is required to contain a summary, which will be printed immediately after the title, clearly separated from the rest of the paper. Its main purpose is to inform the reader quickly of the nature and results of the paper; it may also be used as an aid in retrieving information. The length of a summary will clearly depend on the length and difficulty of the paper, but in general it should not exceed 150 words. It should be typed on a separate page, under the heading "Summary," followed by the title of the paper. Formulas should be used as sparingly as possible. The summary should not make reference to results or formulas in the body of the paper—it should be self-contained.

**Footnotes.** Footnotes should be reduced to a minimum and, where possible, should be replaced by remarks in the text or in the references; formulas in footnotes should be avoided. Footnotes in the text should be identified by superscript numbers and typed together, double-spaced, on a separate page.

**Key Words.** Included as the first footnote on page 1 should be the headings:

American Mathematical Society 1980 subject classifications. Primary—; Secondary—.  
Key words and phrases.

The classification numbers representing the primary and secondary subjects of the article may be found with instructions for its use in the *Mathematical Reviews Annual Subject Index-1980*. The key words and phrases should describe the subject matter of the article; generally they should be taken from the body of the paper.

**Identification of Symbols.** Manuscripts for publication should be clearly prepared to insure that all symbols are properly identified. Distinguish between "oh" and "zero", "ell" and "one"; "epsilon" and "element of"; "kappa" and "kay," etc. Indicate also when special type is required (Greek, German, script, bold-face, etc.); other letters will be set in italics. Acronyms should be introduced sparingly.

**Figures and Tables.** Figures, charts, and diagrams should be prepared in a form suitable for photographic reproduction and should be professionally drawn twice the size they are to be printed. (These need not be submitted until the paper has been accepted for publication.) Tables should be typed on separate pages with accompanying footnotes immediately below the table.

**Formulas.** Fractions in the text are preferably written with the solidus or negative exponent; thus,

$(a + b)/(c + d)$  is preferred to  $\frac{a + b}{c + d}$ , and  $(2\pi)^{-1}$  or

$1/(2\pi)$  to  $\frac{1}{2\pi}$ . Also,  $a^{b(c)}$  and  $a_{b(c)}$  are preferred to  $a^{b^c}$

and  $a_{b,c}$ , respectively. Complicated exponentials should be represented with the symbol exp. A fractional exponent is preferable to a radical sign.

**References.** References should be typed double-spaced and should follow the style:

Wilks, S.S. (1938). The large-sample distribution of the likelihood ratio for testing composite hypotheses. *Ann. Statist.* 1 60-62.

In textual material, the format "... Wilks (1938) ..." should be used. Multiple references can be distinguished as "... Wilks (1938a) ..." Abbreviations for journals should be taken from a current index issue of *Mathematical Reviews*.

**Proofs.** Author will ordinarily receive galley proofs. Corrected galley proofs should be sent to the Managing Editor of the *Annals of Statistics*. (For current address, see the latest issue of the *Annals*.)

Series Editor, Shanti S. Gupta

*Survival Analysis* edited by John Crowley and Richard A. Johnson

This volume contains invited papers from the Special Topics Meeting on Survival Analysis sponsored by the Institute of Mathematical Statistics, October 26–28, 1981 at the Ohio State University, Columbus, Ohio.

## Table of Contents

**Counting Processes and Survival Analysis**

*On the Application of the Theory of Counting Processes in the Statistical Analysis of Censored Survival Data* by Per Kragh Andersen

**Nonparametric Inference for a Single Sample**

*Spline Smooth Estimates of Survival* by Jerome Klotz

*A Nonparametric Estimator of the Survival Function Under Progressive Censoring* by Joseph C. Gardiner and V. Susarla

*Fourier Integral Estimate of the Failure Rate and Its Mean Square Error Properties* by Nozer D. Singpurwalla and Man-Yuen Wong

**Proportional Hazards and Log-Linear Models**

*Estimation of the Ratio of Hazard Functions* by John Crowley, P.-Y. Liu, and Joseph G. Voelkel

*On the Performance of Estimates in Proportional Hazard and Log-Linear Models* by Kjell A. Doksum

*Multi-step Estimation of Regression Coefficients in a Linear Model with Censored Survival Data* by Hira L. Koul, V. Susarla, and John Van Ryzin

**Regression Approaches**

*Inverse Gaussian Regression and Accelerated Life Tests* by Gouri K. Bhattacharyya and Arthur Fries

*Transformation of Survival Data* by Richard A. Johnson

*Covariate Measurement Errors in the Analysis of Cohort and Case-Control Studies* by Ross Prentice

**Problems in System Reliability**

*Confidence Bounds for the Exponential Mean in Time-Truncated Life Tests* by N.R. Mann, R.E. Schafer, and M.C. Han

*Screen Testing and Conditional Probability of Survival* by Janet Myhre and Sam Saunders

*Imperfect Maintenance* by Mark Brown and Frank Proschan

*A Limit Theorem for Testing with Randomly Censored Data* by Hira L. Koul and V. Susarla

**Multivariate Distributions and Competing Risks**

*Negative Dependence* by Henry W. Block and Thomas H. Savits

*Some Recent Results in Competing Risks Theory* by Asit P. Basu and John P. Klein

*Freund's Bivariate Exponential Distribution and Censoring* by Sue Leurgans, Wei-Yann Tsai, and John Crowley

*Asymptotic Properties of Several Nonparametric Multivariate Distribution Function Estimators Under Random Censorship* by Gregory Campbell

**Group Sequential Methods in Clinical Trials**

*Group Sequential Methods for Survival Analysis with Staggered Entry* by Anastasio A. Tsiatis  
*Procedures for Serial Testing in Censored Survival Data* by D.P. Harrington, T.R. Fleming, and S.J. Green

*Sequential Studies on Increments of the Two-Sample Logrank Score Test for Survival Time Data, with Application to Group Sequential Boundaries* by Mitchell H. Gail, David L. DeMets, and Eric V. Slud
