Series Editor, Shanti S. Gupta

*Survival Analysis* edited by John Crowley and Richard A. Johnson

This volume contains invited papers from the Special Topics Meeting on Survival Analysis sponsored by the Institute of Mathematical Statistics, October 26–28, 1981 at the Ohio State University, Columbus, Ohio.

Table of Contents

**Counting Processes and Survival Analysis**

*On the Application of the Theory of Counting Processes in the Statistical Analysis of Censored Survival Data* by Per Kragh Andersen

**Nonparametric Inference for a Single Sample**

*Spline Smooth Estimates of Survival* by Jerome Klotz

*A Nonparametric Estimator of the Survival Function Under Progressive Censoring* by Joseph C. Gardiner and V. Susarla

*Fourier Integral Estimate of the Failure Rate and Its Mean Square Error Properties* by Nozer D. Singpurwalla and Man-Yuen Wong

**Proportional Hazards and Log-Linear Models**

*Estimation of the Ratio of Hazard Functions* by John Crowley, P.-Y. Liu, and Joseph G. Voelkel

*On the Performance of Estimates in Proportional Hazard and Log-Linear Models* by Kjell A. Doksum

*Multi-step Estimation of Regression Coefficients in a Linear Model with Censored Survival Data* by Hira L. Koul, V. Susarla, and John Van Ryzin

**Regression Approaches**

*Inverse Gaussian Regression and Accelerated Life Tests* by Gouri K. Bhattacharyya and Arthur Fries

*Transformation of Survival Data* by Richard A. Johnson

*Covariate Measurement Errors in the Analysis of Cohort and Case-Control Studies* by Ross Prentice

**Problems in System Reliability**

*Confidence Bounds for the Exponential Mean in Time-Truncated Life Tests* by N.R. Mann, R.E. Schafer, and M.C. Han

*Screen Testing and Conditional Probability of Survival* by Janet Myhre and Sam Saunders

*Imperfect Maintenance* by Mark Brown and Frank Proschan

*A Limit Theorem for Testing with Randomly Censored Data* by Hira L. Koul and V. Susarla

**Multivariate Distributions and Competing Risks**

*Negative Dependence* by Henry W. Block, Thomas H. Savits, and Moshe Shaked

*Some Recent Results in Competing Risks Theory* by Asit P. Basu and John P. Klein

*Freund's Bivariate Exponential Distribution and Censoring* by Sue Leurgans, Wei-Yann Tsai, and John Crowley

*Asymptotic Properties of Several Nonparametric Multivariate Distribution Function Estimators Under Random Censorship* by Gregory Campbell

**Group Sequential Methods in Clinical Trials**

*Group Sequential Methods for Survival Analysis with Staggered Entry* by Anastasio A. Tsiatis

*Procedures for Serial Testing in Censored Survival Data* by D.P. Harrington, T.R. Fleming, and S.J. Green

*Sequential Studies on Increments of the Two-Sample Logrank Score Test for Survival Time Data, with Application to Group Sequential Boundaries* by Mitchell H. Gail, David L. DeMets, and Eric V. Slud

# ANNALS OF PROBABILITY

Vol. 11

November 1983

No. 4

## Articles

- Brownian motion, geometry, and generalizations of Picard's little theorem  
S. I. GOLDBERG AND C. MUELLER
- Sojourns of stationary processes in rare sets ..... SIMEON BERMAN
- Hydrodynamics of the voter model ..... ERICO PRESUTTI AND HERBERT SPOHN
- Occupation time limit theorems for the voter model  
J. THEODORE COX AND DAVID GRIFFEATH
- Countable state space Markov random fields and Markov chains on trees  
STAN ZACHARY
- Ramsey's theorem and Poisson random measures  
TIMOTHY C. BROWN AND JOSEPH KUPKA
- Limit theorems for certain branching random walks on compact groups and homogeneous spaces ..... SVANTE JANSON
- A class of Bernoulli random matrices with continuous singular stationary measures  
STEVE PINCUS
- Probability estimates for the small deviations of  $d$ -dimensional random walk  
PHILLIP S. GRIFFIN
- An integral test for the rate of escape of  $d$ -dimensional random walk  
PHILLIP S. GRIFFIN
- The class of limit laws for stochastically compact normed sums ..... WILLIAM E. PRUITT
- Asymptotic behavior of the local time of a recurrent random walk  
N. C. JAIN AND W. E. PRUITT
- Orthogonal transition kernels ..... R. D. MAULDIN, D. PREISS AND H. V. WEIZSÄCKER
- Tightness of probabilities on  $C([0,1]; \mathcal{S}^p)$  and  $D([0,1]; \mathcal{S}^p)$  ..... ITARU MITOMA
- On the first passage time distribution for a class of Markov chains  
MARK BROWN AND NARASINGA R. CHANGANTY
- Some more results on increments of the Wiener process  
D. L. HANSON AND R. P. RUSSO
- The concave majorant of Brownian motion ..... PIET GROENEBOOM
- Chi squared approximations to the distribution of a sum of independent random variables ..... PETER HALL
- Independence via uncorrelatedness under certain dependence structures  
KUMAR JOAG-DEV
- A Berry-Esseen theorem for associated random variables ..... THOMAS E. WOOD
- A functional central limit theorem for weakly dependent sequences of random variables  
NOBERT HERRNDORF
- On the bell-shape of stable densities ..... WOLFGANG GAWRONSKI

## Short Communications

- A multidimensional CLT for maxima of normed sums  
CHARLES HAGWOOD AND HENRY TEICHER
- Strong law of large numbers with respect to a set-valued probability measure  
M. L. PURI AND D. A. RALESCU
- On Marcinkiewicz SLLN in Banach Spaces ..... ANDRZEJ KORZENIOWSKI
- Correlated random walks ..... EDWARD A. BENDER AND L. BRUCE RICHMOND
- An alternate proof of a correlation inequality of Harris ..... J. THEODORE COX

## Notes and Corrections

- Correction to "Large deviation probabilities for samples from a finite population"  
J. ROBINSON

## **GRAPHICAL METHODS FOR DATA ANALYSIS**

This book by leading researchers in the field breaks new ground in techniques for analyzing data. Through many real applications, the authors show how graphical methods can be used to gain insight into data. These graphical methods are applicable in business, economics, physical science, social science, quality control, and virtually any other area where data must be analyzed. Most of the material assumes a knowledge of elementary statistics only. Exercises are provided so that the book may also serve as a textbook. Available in cloth or paper binding.

**CONTENTS:** 1 Introduction 2 Portraying the Distribution of a Set of Data 3 Comparing Data Distributions 4 Studying Two-Dimensional Data 5 Plotting Multivariate Data 6 Assessing Distributional Assumptions About Data 7 Developing and Assessing Regression Models 8 General Principles and Techniques

1983 320 pp. cloth \$24.95 ISBN 0-534-98038-4 paper \$17.95 ISBN 0-871-50413-8

Leo Breiman  
Jerome H. Friedman  
Richard A. Olshen  
Charles J. Stone

## **CLASSIFICATION AND REGRESSION TREES**

This book develops a powerful tree-structured approach to classification and regression for multivariate data. The procedures make minimal distributional assumptions, handle a wide variety of data structures, and are easily interpreted. Applications from medical and chemical projects are included. The first eight chapters are largely expository and cover the use of trees as a data analysis method. The last four chapters provide the mathematical foundations.

**CONTENTS:** 1 Background 2 Introduction to Tree Classification 3 Right Sized Trees and Honest Estimates 4 Splitting Rules 5 Strengthening and Interpreting 6 Medical Diagnosis and Prognosis 7 Mass Spectra Classification 8 Regression Trees 9 Bayes Rules and Partitions 10 Optimal Pruning 11 Construction of Trees from a Training Sample 12 Consistency

Oct. 1983 350 pp. cloth \$21.95 ISBN 0-534-98053-8 paper \$13.95 ISBN 0-534-98054-6

### **Also Available:**

**Festschrift for Erich Lehmann**, edited by P. Bickel, K. Doksum, and J. Hodges, Jr.  
1983, 480 pp. cloth, ISBN 0-534-98044-9 \$41.95

Editorial Board: Peter J. Bickel, William S. Cleveland, Richard M. Dudley
