INSTRUCTIONS TO AUTHORS

A. General

Manuscripts should be submitted in duplicate. They should preferably be written in English; papers in French or German are also accepted. Manuscripts must be in their final form, typed on one side of each sheet only, with double spacing and wide margins. Formulae should be typewritten whenever possible. Mimeographed copies are not acceptable unless clearly legible.

Please include a “Note for the Printer” explaining markings used. See suggestion overleaf.

To speed up publication, authors will receive only one set of proofs: provisionally numbered page proofs. Authors are requested to correct typographical errors only; they will be charged for corrections involving changes, additions or deletions to the original manuscript.

Diagrams should be submitted on separate sheets, not included in the text. They should be drawn in Indian ink in clean uniform lines, the whole about twice the size of the finished illustration. Inscriptions should allow for the figure 1, for example, to be about 2 mm high in the final version (i.e. 4 mm for reduction $\times \frac{1}{2}$). The author should mark in the margin of the manuscript where diagrams may be inserted.

Footnotes, other than those which refer to the title heading, should be numbered consecutively and placed at the foot of the page to which they refer (not at the end of the article).

Please give on the first page of the manuscript a running head (condensed title), which should not exceed 70 letters including spaces.

References to the literature should be listed at the end of the manuscript. The following information should be provided for journal articles: names and initials of all authors, name of the journal, volume, first and last page numbers and year of publication. References to books should include name(s) of author(s), full title, edition, place of publication, publisher and year of publication.

Examples

Commun. math Phys.
B. Marking

1. Text

The words "Theorem", "Lemma", "Corollary", "Proposition" etc. are normally printed in **boldface**, followed by the formulation in *italics* (to be underlined in the manuscript).

The words "Proof", "Remark", "Definition", "Note" etc. are printed in *italics* with the formulation in ordinary typeface.

Words or sentences to be set in italics should be marked by single underlining.

2. Formulae

Letters in formulae are normally printed in italics, figures in ordinary typeface.

It will help the printer if in doubtful cases the position of indices and exponents is marked thus:

\[ b^\alpha \]  \( a^\psi \). Spacing of indices and exponents must be specially indicated (\[ A_{m,n} \]) otherwise they will be set (\( A^n \)).

Underlining for special alphabets and typefaces should be done according to the following code:

- Single underlining: small letter
- Double underlining: capital letter
- Brown: boldface headings, boldface letters in formulae
- Yellow: upright
- Red: Greek
- Blue: Gothic
- Green: Script
- Violet: the numeral 1, and zero (to distinguish them from the small letter \( l \) and the capital letter \( O \))

The following are frequently confused:

- \( u, U \)
- \( o, O \)
- \( x, x \)
- \( \kappa \)
- \( v, u \)
- \( <, \psi \)
- \( c, \varepsilon \)
- \( a', a \}
- \( \) the symbol \( a \) and the indefinite article \( a \);
- Also the handwritten Roman letters:

\( c, \xi, \Lambda, \Gamma, \Delta, \Theta, \lambda, \xi, \psi \)

Please take care to distinguish them in some way.

C. Examples

1. Special alphabets or typefaces

2. Theorem, Lemma, Corollary, Proposition etc. are normally printed in boldface, followed by the formulation in italics (to be underlined in the manuscript).
### Applied Mathematical Sciences

**Vol. 10:** A. H. Stroud, *Numerical Quadrature and Solution of Ordinary Differential Equations*
- A Textbook for a Beginning Course in Numerical Analysis
- 15 figures. XI, 338 pages. 1974
- DM 23.30  ISBN 3-540-90100-0

**Vol. 11:** W. A. Wolovich, *Linear Multivariable Systems*
- 28 figures. IX, 358 pages. 1974
- DM 23.30  ISBN 3-540-90101-9

**K. Deimling:** Nichtlineare Gleichungen und Abbildungsgrade
- Hochschultext

### Graduate Texts in Mathematics

**Vol. 16:** D. Winter, *The Structure of Fields*
- 34 figures. XIII, 205 pages. 1974
- Cloth DM 33.30  ISBN 3-540-90074-X

**Vol. 17:** M. Rosenblatt, *Random Processes*
- 2nd edition
- 4 figures. X, 228 pages. 1974

**Vol. 18:** P. R. Halmos, *Measure Theory*

**Vol. 19:** P. R. Halmos, *A Hilbert Space Problem Book*
- XVII, 365 pages. 1974
- Cloth DM 30.70  ISBN 3-540-90090-X

**H. Grauert, K. Fritzsche:** Einführung in die Funktionentheorie mehrerer Veränderlicher
- Hochschultext
- 25 Abb. VI, 213 Seiten. 1974
- DM 19.80  ISBN 3-540-06742-1

**The Die Grundlehrer der mathematischen Wissenschaften**

**Band 123:** K. Yosida, *Functional Analysis*
- 4th edition
- Approx. 510 pages. 1974
- Cloth DM 69.00  ISBN 3-540-06612-0

**Band 201:** A. Beck, *Continuous Flows in the Plane*
- With the Assistance of J. Lewin, M. Lewin
- 47 figures. Approx. 480 pages. 1974
- Cloth DM 114.00  ISBN 3-540-06157-6

### Lecture Notes in Biomathematics

**Vol. 1:** P. Waltman, *Deterministic Threshold Models in the Theory of Epidemics*
- DM 16.00  ISBN 3-540-06662-7

**Vol. 2:** Mathematical Problems in Biology
- Victoria Conference
- Editor: P. van den Driesche

**Vol. 3:** D. Ludwig, *Stochastic Population Theories*
- Notes by M. Levandowsky

**F. Oberhettinger:** Tables of Mellin Transforms
- Approx. 290 pages. 1974. DM 34.00  ISBN 3-540-06942-9

**Undergraduate Texts in Mathematics**

**K. L. Chung:** Elementary Probability Theory with Stochastic Processes
- 36 figures. X, 325 pages. 1974
- Cloth DM 29.40  ISBN 3-540-06909-9

**P. R. Halmos:** Finite-Dimensional Vector Spaces
- Cloth DM 19.50  ISBN 3-540-90093-4

**P. R. Halmos:** Naive Set Theory
