**Zeitschrift für Physik D: Atoms, Molecules and Clusters** will publish reports of original research, both experimental and theoretical. The international editorial board will operate a strict refereeing system, ensuring high-quality papers, and Springer-Verlag will distribute the journal throughout the world. The journal

- publishes rapidly in English (within three months of a manuscript being accepted)
- accepts full-length papers and short notes
- collects **no** page charges and offers authors fifty free reprints per article
- features special issues and invited progress reports to focus attention on areas of particular current interest

**Zeitschrift für Physik D** covers the entire field of atomic, molecular, cluster, and chemical physics in one single journal. Modern research employs to an increasing extent similar techniques in these fields: laser spectroscopy, UV- and synchrotron-radiation experiments, multiphoton processes, etc., and the papers published will reflect this overlap. The focus will be on free atoms, molecules, and clusters and their properties and interactions as individual entities in gaseous, liquid, and solid environments. All aspects of atomic, molecular, and cluster structure, spectroscopy, interactions, dynamics, production, fragmentation, and ionization will be covered. Other topics to be included: heavy-ion atomic physics, muonic, pionic, and other exotic atoms; hyperfine interactions; electron and positron scattering; collisions in experiment and theory; structure and stability calculations; statistical and dynamic theories of inter- and intramolecular processes.
