Problems involving the choice of a specified set of objects from a finite set of objects are usually called "combinatorial". Although there is seldom any theoretical difficulty concerning the existence of the desired subset, there is almost always an enormous amount of difficulty connected with the actual determination of this subset.

Questions of this type arise in all parts of mathematics, in algebra, geometry and analysis. In general, any advance in procedures requires a major theoretical advance. Quite often, the physical background of the mathematical problem suggests a new mathematical approach to a longstanding problem.

This volume contains a variety of papers devoted to combinatorial problems arising in the mathematical areas cited above, and in the new fields of scheduling, transportation, communication and design of experiments. A number of papers are devoted to the use of digital computers to attack the complicated problems which arise from apparently simple physical problems.

Not only will this volume furnish a valuable survey of the current state of the art, but it will also provide a source for research in this vast and growing field.

AMERICAN MATHEMATICAL SOCIETY
190 Hope Street, Providence 6, Rhode Island
CONTENTS

Vol. 4, No. 4 December, 1960

Dirichlet series
By A. C. Schaeffer† ............................................. 479

Some remarks on A. C. Schaeffer's paper on Dirichlet series
By Hwa S. Hahn ................................................... 501

Groups on $S^n$ with principal orbits of dimension $n-3$
By D. Montgomery and C. T. Yang .............................. 507

Some properties of totally coregular matrices
By B. E. Rhoades ................................................. 518

Some uniqueness theorems on Riemannian manifolds with boundary
By Chuan-Chih Hsiung ........................................... 526

Adequate subcategories
By J. R. Isbell .................................................... 541

A class of multiplicative linear functionals on the measure algebra of a
 locally compact Abelian group
By Edwin Hewitt and Shizuo Kakutani ........................... 553

Homogeneous symplectic multipliers
By R. C. Gunning .................................................. 575

On Weierstrass products of zero type on the real axis
By J. P. Kahane and L. A. Rubel ............................... 584

Two-point boundary problems involving a parameter linearly
By Hyman J. Zimmernber ........................................ 593

Algebraic Lie algebras and representative functions. Supplement
By G. Hochschild ................................................ 609

The structure of contours of a Fréchet surface
By R. E. Fullerton .............................................. 619

On last exit times
By K. L. Chung ................................................. 629

Behavior of integral group representations under ground ring extension
By Irving Reiner .................................................. 640

Solvable factorizable groups II
By W. R. Scott ............................................... 652

Published by the University of Illinois Press in March, June, September
and December. Supported in part by the George A. Miller Endowment.
Printed by Waverly Press, Baltimore, Maryland.

The subscription price is $9.00 a volume (four numbers); this is reduced
to $5.00 for individual members of the American Mathematical Society. The
price of a single number is $3.00. Subscriptions should be sent to the University
