THE ROCKY MOUNTAIN JOURNAL OF MATHEMATICS

Volume 9 Winter 1979 Number 1

CONTENTS

Introduction to this issue
By Richard Griego and David Sanchez 1
A stochastic model of the Isle Royale biome
By W.A. Beyer, D.R. Harris and R.J. Ryan 3
Harvesting strategies for population systems
By Fred Brauer 19
Ergodic theorems of population dynamics
By Joel E. Cohen 27
Graph theoretic models of food webs
By Joel E. Cohen 29
Stability analysis for a vector disease model
By Kenneth L. Cooke 31
Stability and instability in predator-prey models with growth rate response delays
By J.M. Cushing 43
A pseudo-steady state approximation for stochastic chemical kinetics
By Thomas Darden 51
On the boundedness of lymphocytes in deterministic threshold models of humoral immune response
By H.I. Freedman and J.A. Gatica 73
Prudent predation and the character of ecological attractor sets
By Michael E. Gilpin 83
Harvesting competing populations
By D.H. Griffel 87
Slow selection analysis of genetic traits in synchronized populations
By F.C. Hoppensteadt 93
Long range predation in pattern formation
By James P. Keener 99
Stochastic models for the evolution of multigene families
By Alan S. Perelson 115
Periodic solutions of an epidemic model with a threshold
By Hal L. Smith 131

Immunological surveillance and neoplastic development
By George W. Swan 143
On the applicability of current population models to the growth of insect populations
By Fritz Taylor 149
On a genetics model of Moran evolving in random environments
By William C. Torrez 153
Yields for annual plants as an adaptive response
By Thomas L. Vincent 163
A method for the approximate solution of some stochastic equations of population biology
By Benjamin S. White 175
