THE ROCKY MOUNTAIN JOURNAL OF MATHEMATICS

Volume 7 Summer 1977 Number 3

CONTENTS

Proceedings of the regional conference on the application of topological methods in differential equation
By J. Bebernes 385
Asymptotic analysis of reaction-diffusion wave fronts
By Paul C. Fife 389
Stable homotopy and ordinary differential equations with nonlinear boundary conditions
By Jean Mawhin 417
Stability theorems and hyperbolicity in dynamical systems
By Clark Robinson 425
Hyperbolic structures in hamiltonian systems
By R.C. Churchill, G. Pecelli and D.L. Rod 439
Coexistence of stable and random motion
By R.C. Churchill, G. Pecelli, S. Sacolick and D.L. Rod 445
Periodic solutions of autonomous differential equations in higher dimensional spaces
By William Grasman 457
The disappearance of solitary traveling wave solutions of a model of the belousov-zhabotinskii reaction
By William C. Troy 467
Separathrices in solitude
By Richard H. Elderkin 479
A boundary layer theory for some linear and nonlinear boundary value problems
By F.A. Howes 491
A weak hartman's theorem for homomorphisms and semi-groups in a banach space
By John T. Montgomery 505
On the uniqueness and global asymptotic stability of periodic solutions for a third order system
By S.P. Hastings 513
Non-singular flows on S^3 with hyperbolic chain-recurrent set
By John M. Franks 539
Approximation and decay of solutions of nonlinear diffusion equations
By David Hoff 547

Invariant sets and the hokohara-kneser property for systems of parabolic partial differential equations
By J.W. Bebernes and K. Schmitt 557
Projection methods for nonlinear nodal problems
By P.W. Bates and G.B. Gustafson 569
On continua of periodic solutions for functional differential equations
By Heinz-Otto Peitgen 609
